Atlas of Chest Sonography Gebhard Mathis, 2003 Chest sonography is an established procedure in the stepwise imaging diagnosis of pulmonary and pleural disease. This book presents the state of the art in chest investigation by means of ultrasonography. A number of excellent illustrations and the compact text provide concise and easy-to-assimilate information about the diagnostic procedure. Basic elements such as indications, investigation techniques, and image artifacts are detailed in separate chapters. **NewMedia**, 1999 *Netter's Concise Radiologic Anatomy* Edward C. Weber, Joel A. Presents side-by-side radiology examples of normal anatomy and common variants with corresponding anatomy illustrations demonstrating the clinical relevance of the anatomy and providing direct at-a-glance comparisons between idealized anatomic illustrations and real-life medicine. Includes a brief background in basic radiology including reconstructions and a list of common abbreviations to provide a foundation of knowledge for the images presented. Atlas of Two-Dimensional Echocardiography in Congenital Cardiac Defects G.J. van Mill, A. Moolaert, E. Harinck, 2012-12-06 In a relatively short period of time two dimensional echocardiography has become the most important non invasive diagnostic tool in the daily practice of a pediatric cardiologist who predominantly deals with congenital

structural heart disease in neonates and infants Consequently one dimensional M mode echocardiography has lost most of its importance particularly in this field Therefore an atlas showing exclusively two dimensional echo cardiograms of the most common and some less frequently occurring malformations appeared to be a useful addition to the existing literature The confinement to two dimensional imaging alone allowed an elaborate presentation of the various defects with more than 200 selected still frames and many additional explanatory drawings and diagrams The material was collected from patients who were referred to the Department of Pediatric Cardiology of the Wilhelmina University Children s Hospital in Utrecht during a period of about 2 years The two dimensional echocardiographic findings were correlated with cardiac catheterization data and or surgical procedures and or post mortem investigations The necessary echocardiographic equipment was aquired with financial aid from the Dutch Heart Foundation We are indebted to Mrs 1 W Wetselaar for her outstanding artwork We also thank P D Woltema and F l van Waert for the photographic reproductions lacomine Bosma for preparing and type setting the entire manuscript and Dr N Middleton for critically reading the English text G l van Mill M D A l Moulaert M D E Harinck M D
