Condensation In Buildings:

Condensation in Buildings Derek J. Croome,1972 Condensation in Buildings Richard S. Dill,1947 *Condensation in Buildings* ,2021 Dampness in Buildings E G Gobert,T A Oxley,2013-11-05 This book explains the nature of dampness in buildings how to diagnose a dampness problem before it gets out of hand and how to deal with it It covers the problems of rising dampness and condensation and how to distinguish them which are generally not fully understood even by many professional surveyors The book stresses the need to use a moisture meter to obtain reliable and comprehensive information Dampness in Buildings will be of immediate practical use to surveyors architects builders housing managers and health inspectors It will be equally valuable to house owners and potential purchasers Moisture Condensation in Building Walls Harold W. Woolley,1940 Moisture control in buildings Heinz R. Trechsel,1994 *Dampness in Buildings* Alan Oliver,James Douglas,Stewart Stirling,1997-01-30 This book considers the performance of the main building elements in relation to moisture exclusion and looks in detail at condensation and rising dampness A chapter on diagnosis includes a checklist of likely causes The new edition includes more material on several topics including dampness in masonry problems arising from modern construction techniques new materials material incompatibility and the difficulties associated with assessing dampness in buildings *CONDENSATION IN BUILDINGS- PROCEEDINGS OF A CONFERENCE- ORGANISED BY THE CONSTRUCTION INDUSTRY CONFERENCE CENTRE LTD. , **Moisture and Buildings*** Arianna Brambilla,Alberto Sangiorgio,2021-05-28 One in three homes on average suffer from excessive dampness and mould proliferation with significant health and economic impacts The combination of new construction methodologies stricter airtightness requirements and the changing social and cultural context that influences the way we live inside buildings has created unprecedented challenges for the built environment In modifying indoor and outdoor environments and the building envelopes that serve as a filter between the two we are changing the physical parameters of the ways in which buildings behave and respond to climatic stimuli Understanding and predicting the way in which buildings and moisture may interact should be an important step in the design process aiming to minimise possible negative long term consequences Understanding and predicting the way in which buildings and moisture may interact is today more than ever essential yet difficult as the experience of the past has lost its applicability Moisture related issues never have a simple solution since they involve multiple factors including design construction maintenance materials climate and occupation pattern Thus while the topic is attracting growing attention among researchers designers and practitioners the pace with which actual change is occurring is still too slow *Moisture and Buildings* provides a critical overview of current research knowledge and policy frameworks and presents a comprehensive analysis of the implications of moisture and the importance of accounting for it during the design process It responds to the urgent need for a systematic organization of the existing knowledge to identify research gaps and provide directions for future developments The ultimate goal is to increase awareness of the multifaceted

implications of hygrothermal phenomena and promote integrated design processes that lead to healthier and more durable constructions Presents advanced knowledge on hygrothermal processes and their interaction with buildings Integrates the three key areas of moisture transport and its impact on buildings including durability human health and comfort Considers the most useful computational tools for assessing moisture and building interactions Includes a section on the main European American and Australian building codes Explains the risks of mold growth to human health including growth models to assessment methods

Moisture Migration in Buildings M. Lieff, Heinz R. Trechsel, 1982 Control of the External Environment of Buildings Bill B. P. Lim, 1988 This volume contains selected papers delivered at several conferences held in Singapore dealing with the control of the external environment The topics discussed are generally applicable to warm humid climates and are intended to introduce the reader to the various problems of building design for the climatic conditions of the tropical regions Illustrations and photographs are included

Building Systems for Interior Designers Corky Binggeli, 2010 Written in a straightforward nontechnical style that maintains depth and accuracy this landmark reference is the first text on building systems for interior designers From heating and cooling systems water and waste electricity lighting interior transportation and communication systems all of the mechanical and electrical systems that interior designers need to know are covered in a clear and accessible way The technical knowledge and vocabulary presented here allow interior designers to communicate more effectively with architects engineers and contractors while collaborating on projects leading to more accurate solutions for problems related to a broad range of other building considerations with an impact on interior design New to this edition are chapters on structural systems and building components and how they are integrated with the other systems Illustrated with over 100 photographs and drawings new to this edition Building Systems for Interior Designers is sure to be constantly at the fingertips of designers

Building Science Jens Pohl, 2011-02-21 With the improved efficiency of heating cooling and lighting in buildings crucial to the low carbon targets of all current governments Building Science Concepts and Applications provides a timely and much needed addition to the existing literature on architectural and environmental design education Taking a logical and didactic approach the author introduces the reader to the underlying concepts and principles of the thermal lighting and acoustic determinants of building design in four integrated sections The first section explores the thermal building environment and the principles of thermal comfort translating these principles into conceptual building design solutions The author examines the heat flow characteristics of the building envelope and explains steady state design methods that form the basis of most building codes He discusses the sun as a natural heat source and describes the principles of active and passive solar building

design solutions The second section introduces the scientific principles of light color and vision stressing the importance of daylight in building design presenting the Daylight Factor design concept and methodology and discussing glare conditions and their avoidance It also addresses artificial lighting delving into the prominent role that electricity plays in the production of light by artificial means and comparing the efficacy and characteristics of the various commercially available light sources in terms of the energy to light conversion ratio life span available intensity range color rendition properties and cost The third section deals with the various aspects of sound that impact the design of the built environment discussing the nature of sound as a physical force that sets any medium through which it travels into vibration and laying the foundations for the treatment of sound as an important means of communication as well as a disruptive disturbance The final section discusses the foundational concepts of ecological design as a basis for addressing sustainability issues in building design solutions These issues include the embedded energy of construction materials waste management preservation of freshwater and management of graywater adoption of passive solar principles energy saving measures applicable to mechanical building services and the end of lifecycle deconstruction and recycling of building materials and components Covers the fundamental building science topics of heat energy light and sound Takes a logical and didactic approach tracing the historical roots of building science Includes summaries of new technologies in solar energy and photovoltaic systems Features a section on the principles of sustainable architecture Website with answers to MC questions testing students learning
