The National Science Foundation's Materials Research Science and Engineering Centers Program National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Solid State Sciences Committee, MRSEC Impact Assessment Committee, 2007-12-01 The Materials Research Science and Engineering Centers MRSEC Impact Assessment Committee was convened by the National Research Council in response to an informal request from the National Science Foundation Charged to examine the impact of the MRSEC program and to provide guidance for the future the committee included experts from across materials research as well as several from outside the field The committee developed a general methodology to examine the MRSEC centers and after extensive research and analysis came to the following conclusions MRSEC center awards continue to be in great demand The intense competition within the community for them indicates a strong perceived value Using more quantitative measures the committee examined the performance and impact of MRSEC

activities over the past decade in the areas of research facilities education and outreach and industrial collaboration and technology transfer The MRSEC program has had important impacts of the same high standard of quality as those of other multi investigator or individual investigator programs Although the committee was largely unable to attribute observed impacts uniquely to the MRSEC program MRSECs generally mobilize efforts that would not have occurred otherwise Because of an observed decline in the effectiveness of the centers the committee recommended a restructuring the MRSEC program to allow more efficient use and leveraging of resources The new program should fully invest in centers of excellence as well as in stand alone teams of researchers to allow tighter focus on key strengths of the program In its report the committee outlines one potential vision for how this might be accomplished in a revenue neutral fashion Materials in a New Era National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Solid State Sciences Committee, 2000-01-09 The 1999 Solid State Sciences Committee Forum entitled Materials in a New Era was held at the National Academy of Sciences in Washington D C on February 16 17 1999 The forum was designed to launch the report entitled Condensed Matter and Materials Physics Basic Research for Tomorrow s Technology That report part of the decadal survey series Physics in a New Era reviews some of the outstanding accomplishments in materials research over the last decade It indicates some emerging areas and conveys the true excitement in the field from a perspective of basic science and potential societal impact *Midsize Facilities* National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Solid State Sciences Committee, Committee on Smaller Facilities, 2006-04-06 Most of the instruments now used for materials research are too complex and expensive for individual investigators to own operate and maintain them Consequently they have become increasingly consolidated into multi user small to midsize research facilities located at many sites around the country The proliferation of these facilities however has drawn calls for a careful assessment of best principles for their operation With support from the Department of Energy and the National Science Foundation the NRC carried out a study to characterize and discuss ways to optimize investments in materials research facility infrastructure with attention to midsize facilities This report provides an assessment of the nature and importance of mid sized facilities their capabilities challenges they face current investment and optimizing their effectiveness *Los Alamos Science* ,2006 **Materials Research** ,2003 Contributed articles with reference to India **Physics in a New Era** National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Physics Survey Overview Committee, 2001-07-15 Physics at the beginning of the twenty first century has reached new levels of accomplishment and impact in a society and nation that are changing rapidly Accomplishments have led us into the information age and fueled broad technological and economic development The pace of discovery is quickening and stronger links with other fields such as the biological sciences are being developed The intellectual reach has never been greater and the questions being asked are more ambitious than ever

before Physics in a New Era is the final report of the NRC's six volume decadal physics survey. The book reviews the frontiers of physics research, examines the role of physics in our society, and makes recommendations designed to strengthen physics and its ability to serve important needs such as national security, the economy, information technology, and education. Introduction to Complex Mediums for Optics and Electromagnetics Werner S. Weiglhofer, Akhlesh Lakhtakia, 2003. Complex mediums electromagnetics (CME) describes the study of electromagnetic fields in materials with complicated response properties. This truly multidisciplinary field commands the attentions of scientists from physics and optics to electrical and electronic engineering, from chemistry to materials science to applied mathematics, biophysics, and nanotechnology. This book is a collection of essays to explain complex mediums for optical and electromagnetic applications. All contributors were requested to write with two aims: first to educate, second to provide a state-of-the-art review of a particular subtopic. The vast scope of CME exemplified by the actual materials covered in the essays should provide a plethora of opportunities to the novice and the initiated alike. Vortices and Turbulence at Very Low Temperatures Carlo Barenghi, Yuri Sergeev, 2009-07-25. Recent investigations have highlighted the similarities between turbulence in cryogenic fluids at temperatures close to absolute zero, in particular superfluid helium, and turbulence in ordinary fluids. This book contains lectures on various theoretical and experimental aspects of the problem, given by experts at the advanced school Vortices and Turbulence at Low Temperatures held at CISM Udine in the summer of 2007. The lectures provide an introduction into this rapidly expanding area of research. The book is suitable for PhD students and young researchers starting their career, as well as established researchers in either low temperature physics or fluid mechanics who are interested in this problem. Frontiers in Surface Science and Interface Science C.B. Duke, E. Ward Plummer, 2002-05-21. Any notion that surface science is all about semiconductors and coatings is laid to rest by this encyclopedic publication. Bioengineered interfaces in medicine, interstellar dust, DNA computation, conducting polymers, the surfaces of atomic nuclei, all are brought up to date. Frontiers in Surface and Interface Science, a milestone publication deserving a wide readership. It combines a sweeping expert survey of research today with an educated look into the future. It is a future that embraces surface phenomena on scales from the subatomic to the galactic, as well as traditional topics like semiconductor design, catalysis, and surface processing, modeling, and characterization. And great efforts have been made to express sophisticated ideas in an attractive and accessible way. Nanotechnology, surfaces for DNA computation, polymer-based electronics, soft surfaces, interstellar surface chemistry, all feature in this comprehensive collection. Silicon Photonics II David J. Lockwood, Lorenzo Pavesi, 2010-10-13. This book is volume II of a series of books on silicon photonics. It gives a fascinating picture of the state of the art in silicon photonics from a component perspective. It presents a perspective on what can be expected in the near future. It is formed from a selected number of reviews authored by world leaders in the field and is written from both academic and industrial viewpoints. An in-depth discussion of the route towards fully integrated

silicon photonics is presented This book will be useful not only to physicists chemists materials scientists and engineers but also to graduate students who are interested in the fields of micro and nanophotonics and optoelectronics **Sculptured Thin Films** Akhlesh Lakhtakia,R. Messier,2005 Sculptured thin films STF's are a class of nanoengineered materials with properties that can be designed and realized in a controllable manner using physical vapor deposition This text presented as a short course at the SPIE Optical Science and Technology Symposium couples detailed knowledge of thin film morphology with the optical response characteristics of STF devices An accompanying CD contains Mathematica TM programs for use with the presented formalisms Thus readers will learn to design and engineer STF materials and devices for future applications particularly with optical applications Graduate students in optics and practicing optical engineers will find the text valuable as well as those interested in emerging nanotechnologies for optical devices **Models** Soraya de Chadarevian,Nick Hopwood,2004 Now that 3 D models are so often digital displays on flat screens it is timely to look back at the solid models that were once the third dimension of science This book is about wooden ships and plastic molecules wax bodies and a perspex economy monuments in cork and mathematics in plaster casts of diseases habitat dioramas and extinct monsters rebuilt in bricks and mortar These remarkable artefacts were fixtures of laboratories and lecture halls studios and workshops dockyards and museums Considering such objects together for the first time this interdisciplinary volume demonstrates how in research as well as in teaching 3 D models played major roles in making knowledge Accessible and original chapters by leading scholars highlight the special properties of models explore the interplay between representation in two dimensions and three and investigate the shift to modelling with computers The book is fascinating reading for anyone interested in the sciences medicine and technology and in collections and museums **Turbulence, Dynamos, Accretion Disks, Pulsars and Collective Plasma Processes** S.S. Hasan,R. Gangadhara,V. Krishan,2008-10-11 It is well established and appreciated by now that more than 99% of the baryonic matter in the universe is in the plasma state Most astrophysical systems could be approximated as conducting fluids in a gravitational field It is the combined effect of these two that gives rise to the mind boggling variety of configurations in the form of filaments loops jets and arches The plasma structures that cannot last for more than a second or less in a laboratory remain intact for astronomical time and spatial scales in an astrophysical setting The case in point is the well known extragalactic jets whose collimation and stability has remained an enigma inspite of the efforts of many for many long years The high energy radiation sources such as the active galactic nuclei again summon the coherent plasma radiation processes for their exceptionally large output from regions of relatively small physical sizes The generation of magnetic field anomalous transport of angular momentum with decisive bearing on star formation processes the ubiquitous MHD turbulence under conditions irreproducible in terrestrial laboratories are some of the generic issues still awaiting a concerted effort for their understanding Quantum Plasmas pair plasmas and pair ion plasmas exist under extreme conditions in planetary interiors and exotic stars In this workshop plasma physicists

astrophysicists and plasma astrophysicists are brought together to discuss these issues Review Oak Ridge National Laboratory,1999 Department of Energy Fiscal Year 2002 Budget Request United States.
