Conduction Aphasia:

Conduction Aphasia Susan E. Kohn, 2013-06-17 Over the past decade questions about the clinical classification and experimental examination of aphasic patients have been raised Growing doubts about the validity and reliability of standard clinical diagnoses have been responsible in part for the explosion of case studies in the neurolinguistic literature In turn rejection of classical aphasia diagnoses has made it difficult to synthesize much of this literature and no alternative method for selecting and comparing aphasic patients has emerged This volume was motivated by a desire to take a fresh look at the benefits that aphasia diagnosis has for both clinical and experimental work This is accomplished by exploring one classical aphasia syndrome from a multidisciplinary perspective that is by presenting information from the disciplines of neurology speech language pathology and experimental neurolinguistics Given this scope it is hoped that this work will appeal to an equally broad range of readers

Localization of Clinical Syndromes in Neuropsychology and Neuroscience Antonio E. Puente, Joseph M. Tonkonogy, 2009-01-23 Localization refers to the relationship between the anatomical structures of the brain and their corresponding psychological or behavioral functions Throughout the history of neuropsychology there has been considerable debate over how localized mental functions truly are By the mid 20th century a formidable amount of evidence strongly supported the modularity hypothesis that psychological functions such as language and memory reside in specific neuroanatomical areas Recent neuroimaging studies suggest a more holistic view that psychological functions are distributed and dynamically organized across multiple brain regions This book attempts to reconcile the classic and modern approaches arguing that newer imaging techniques must be used in conjunction with rather than replace traditional neuropsychology approaches such as interviewing testing and autopsy exams Only by triangulating these approaches can neuropsychologists begin to understand the complex relationship between brain structure and mental function that is exhibited across the spectrum of neurological disorders The perspective offered by Drs Tonkonogy and Puente on this philosophical and scientific debate is a provocative counterargument to current research that overemphasizes imaging studies to the exclusion of other useful techniques Key features Offers systematic descriptions of the clinical manifestations anatomical data and history of the various approaches to neuropsychological syndromes Differentiates syndromes characterized by disturbances of conventional versus unconventional information processing Examines both traditional and modern approaches to new neuropsychological syndromes of social agnosia social apraxia and agnosia of actions as well as memory disorders visual disorders and more An indispensable resource for clinicians and researchers in neuropsychology and neuroscience this book serves as a solid frame of reference for the localization of clinical neuropsychological symptoms

Geschwind, 2012-12-06 Philosophers of science work not only with the methods of the sciences but with their contents as well Substantive issues concerning the relation between mind and matter between the material basis and the functions of cognition have been central within the entire history of philosophy We recall such philosophers as Aristotle Descartes the early Kant Ernst Mach and the early William James as directly inquiring of the organs and structures of thinking Science and its philosophical self criticism are especially and deeply united in the effort to understand the biological brain and human behavior and so it requires no apology to include this collection of clinical studies among Boston Studies in the Philosophy of Science The work of Dr Norman Geschwind well represented in this selection explores the relation between structure and function between the anatomy of the brain and the higher behavior of men and women As a clinical neurologist Geschwind was led to these studies particularly by his interest in those pathologies which have to do with human perception and language His research into the anatomical substrates of specific disorders and strikingly the aphasias present a fascinating and provocative examination of fundamental questions which will concern not neurologists alone but also psychologists physicians linguists speech pathologists educators anthropologists historians of medicine and philosophers among others namely all those interested in the characteristic modes of human activity in speech in perception and in the learning process generally
