Lenhard Rudolph, 2007-11-07 Telomere shortening represents one of the basic aspects of ageing and telomere dysfunction could contribute to the accumulation of DNA damage during ageing This book summarizes evidence and data indicating that telomere dysfunction influences human ageing diseases and cancer The book describes our current knowledge on checkpoints that limit cellular lifespan and survival in response to telomere dysfunction There is special focus on adult stem cells **Longevity: the Means of Prolonging Life After Middle Age** John Gardner (M.D.), 1874 **Longevity** John Gardner, 1875 *Ageing and Invisibility* Emilio Mordini, Paul de Hert, 2010 Providing an overview of the process of inclusion for older people and addressing the ethical social and legal aspects of the process this book is suitable for researchers policy makers organisations and companies as well as for those with an interest in the identification and promotion of good practice within an ageing society **Anti-Ageing Nutrients** Deliminda Neves, 2015-07-07 Ageing is a complex time related biological phenomenon that is genetically determined and environmentally modulated According to even the most pessimistic projections average lifespan is expected to increase around the world during the next 20 years significantly raising the number of aged individuals But increasing life expectancy presents new problems and industrialized countries are facing a pronounced increase in lifestyle diseases which constitute barriers to healthy ageing Anti Ageing Nutrients Evidence based Prevention of Age Associated Diseases is written by a multidisciplinary group of researchers all interested in the nutritional modulation of ageing mechanisms Structured in three parts

Part 1 looks at the cellular modifications that underlie senescence of cells and ageing of the organisms the effects of energy restriction on cellular and molecular mechanisms and in the whole organism and the epigenetic modifications associated with ageing Part 2 includes chapters which discuss the nutritional modulation of age associated pathologies and the functional decline of organs with a focus on those primarily affected by chronological ageing Part 3 summarises the knowledge presented in the previous chapters and considers the best diet pattern for the aged individuals The book reflects the most recent advances in anti ageing nutrition and will be a valuable resource for professionals educators and students in the health nutritional and food sciences

Prevention of Chronic Diseases and Age-Related Disability Jean-Pierre Michel,2018-10-30 This book explains how to promote and prolong healthy ageing which constitutes maintaining daily functioning and well being until the end of life In this context the editor of the book and the international team of authors all of whom are experts on the various aspects of ageing demonstrate the value of this new approach in clinical practice The systematic integration of a functional assessment if not a complete and comprehensive geriatric assessment is fundamental in daily clinical practice Identifying risk factors at midlife will help to promote health at any age Moreover randomized control trials are making it increasingly clear that interventions could help ageing and elderly adults enjoy their remaining years without disability Indeed wellbeing will also increase allowing elderly adults to stay independent until a very advanced age The book also shows how considerable societal benefits can be easily forecast when more lifetime is spent without disability followed by a dignified end of life This book will be of interest to all medical doctors general practitioners and organ specialists as well as geriatricians who want to have a complete overview of what healthy ageing means

Evidence-based Functional Foods for Prevention of Age-related Diseases Surajit Pathak,Antara Banerjee,Asim K. Duttaroy,2023-07-06 This book illustrates the recent advancements in the role of functional foods in preventing age related disorders It correlates age related diseases and the effect of dietary compounds from different functional foods herbs and nutraceuticals Notably the book describes unique nutrition problems in many chronic diseases such as bone disease cardiovascular disorders brain disorders immune disorders and cancers The book also discusses the use of functional foods for controlling osteoporosis improving bone strength maintaining dental health controlling obesity gut health and maintaining immune function using functional ingredients such as probiotics and prebiotics Further it presents the state of the art of aging and nutrigenomics research and the molecular mechanisms underlying the beneficial effects of bioactive nutrients on major aging related disorders Finally the book embodies the latest findings and the mechanisms of actions of functional foods in aging and degenerative diseases and their beneficial uses in the aged population

Hayat, 2014-09-12 This third volume in the series Tumor Dormancy Quiescence and Senescence discusses the role of tumor dormancy and senescence in a number of diseases including breast cancer ovarian cancer and leukemia The contents are organized under five subheadings General Applications Role in Breast Cancer Role in Ovarian Cancer Role in Leukemia and Role in Cardiovascular Disease The first section includes basic information on the definition of dormancy how cells become senescent and what they do along with an appraisal of the current state of research on dormancy Section Two explores dormancy in breast cancer including the progression of hormone dependent mammary tumors after dormancy Section Three details the resistance of Type II ovarian tumors in which the resistant tumor cell population persists after chemotherapy in a state of dormancy with recurrent tumors arising upon transformation of such dormant cells back to malignant growth This section explains how lineage histological subtypes and grade influence the differential response of ovarian cancer resistance to platinum drugs The fourth section explores leukemia discussing regulation of the promyelocytic leukemia protein and its role in premature senescence The final section explores the role of senescence and autophagy in age related cardiovascular diseases and the observation that autophagy seems to retard cardiac senescence Like the two preceding volumes in the series Volume 3 stands out for its comprehensive approach its roster of some 26 expert contributors representing seven different countries and its up to date review of leading edge technology and methods Comorbidities in Chronic Kidney Disease (CKD) Joachim Jankowski, Heidi Noels, 2021-03-02 With a mean worldwide prevalence of 13% chronic kidney disease imposes a massive health burden on our society In addition to reduced kidney function patients with chronic kidney disease

increasingly suffer from cardiovascular diseases affecting the heart and vasculature Cardiovascular diseases account for around half of the deaths of patients with advanced chronic kidney disease However therapeutic options are highly insufficient The pathological mechanisms that underlie increased cardiovascular risk in patients with chronic kidney disease remain largely unknown This Special Issue provides insights into comorbidities in CKD patients mainly focused on increased cardiovascular risk and summarizes current knowledge of underlying pathophysiological mechanisms

Female infertility: Genetics of Reproductive Ageing, Menopause and Primary Ovarian Insufficiency Mara Marongiu,Laura Crisponi,Emanuele Pelosi,Manuela Uda,2022-03-29

Genetic Effects on Aging David E. Harrison,1990-08-09 This volume provides background knowledge useful to those setting out to do genetic studies of aging in mammals and raises vital questions How many genes are important in mammalian aging What are the optimal methods for their study To what degree are patterns of aging and patterns of growth and development part of the same process Do patterns of development predict subsequent patterns of growth and aging Are there a few fundamental aging processes or does every biological system age The rapid rate of progress in this field required a new volume with a new approach based on the combination of classical genetics and the powerful new tools of molecular genetics Although mammalian systems are emphasized representatives of the advanced genetic studies in Drosophila and other model systems are included The purpose is to enrich and stimulate genetic studies of mammalian aging by suggesting and evaluating future possibilities

Model Systems in Aging Thomas Nyström,Heinz D. Osiewacz,2004 Aging is the progressive decline in biological functions over time This decline targets macromolecules cells tissues and as a consequence whole organisms Despite considerable progress in the development of testable hypothesis concerning aging in an evolutionary context a unifying theory of the molecular physiological mechanistic causes of aging has not been reached In fact is it not clear to what extent aging is a programmed or stochastic process This book takes the reader from unicellular bacterial deterioration via senescence in fungi and worms to aging in rodents and humans allowing a

comparative view on similarities and differences in different genetic model systems The different model systems are scrutinized in the light of contemporary aging hypothesis such as the free radical and genomic instability theories Aging Research in Yeast Michael Breitenbach,S. Michal Jazwinski,Peter Laun,2011-11-19 This volume includes contributions by the leading experts in the field of yeast aging Budding yeast *Saccharomyces cerevisiae* and other fungal organisms provide models for aging research that are relevant to organismic aging and to the aging processes occurring in the human body Replicative aging in which only the mother cell ages while the daughter cell resets the clock to zero is a model for the aging of stem cell populations in humans while chronological aging measured by survival in stationary phase is a model for the aging processes in postmitotic cells for instance neurons of the brain Most mechanisms of aging are studied in yeast Among them this book discusses mitochondrial theories of aging emphasizing oxidative stress and retrograde responses the role of autophagy and mitophagy the relationship of apoptosis to aging processes the role of asymmetric segregation of damage in replicative aging the role of replication stress and the role of the cytoskeleton in aging Modern methods of yeast genetics and genomics are described that can be used to search for aging specific functions in a genome wide unbiased fashion The similarities in the pathology of senescence studied in yeast and of cancer cells including genome instability are examined
