   Computing with T.Node Parallel Architecture D. Heidrich,J.C. Grossetie,2012-12-06 Parallel processing is seen today as the means to improve the power of computing facilities by breaking the Von Neumann bottleneck of conventional sequential computer architectures By defining appropriate parallel computation models definite advantages can be obtained Parallel processing is the center of the research in Europe in the field of Information Processing Systems so the CEC has funded the ESPRIT Supemode project to develop a low cost high performance multiprocessor machine The result of this project is a modular reconfigurable architecture based on NMOS transputers T Node This machine can be considered as a research industrial and commercial success The CEC has decided to continue to encourage manufacturers as well as research and end users of transputers by funding other projects in this field This book presents course papers of the Eurocourse given at the Joint Research Centre in ISPRA Italy from the 4th to 8 of November 1991 First we present an overview of various trends in the design of parallel architectures and specially of the T Node with it s software development environments new distributed system aspects and also new hardware extensions based on the NMOS T9000 processor In a second part we review some real case applications in the field of image synthesis image processing signal processing terrain modeling particle physics simulation and also enhanced parallel and distributed numerical methods on T Node

Romine,A. Sameh,R. Voigt,1990-01-01 Describes a selection of important parallel algorithms for matrix computations Reviews the current status and provides an overall perspective of parallel algorithms for solving problems arising in the major areas of numerical linear algebra including 1 direct solution of dense structured or sparse linear systems 2 dense or structured least squares computations 3 dense or structured eigenvaluen and singular value computations and 4 rapid elliptic solvers The book emphasizes computational primitives whose efficient execution on parallel and vector computers is essential to obtain high

performance algorithms Consists of two comprehensive survey papers on important parallel algorithms for solving problems arising in the major areas of numerical linear algebra direct solution of linear systems least squares computations eigenvalue and singular value computations and rapid elliptic solvers plus an extensive up to date bibliography 2 000 items on related research **Self-Organizing Neural Networks** Udo Seiffert,2013-11-11 The Self Organizing Map SOM is one of the most frequently used architectures for unsupervised artificial neural networks Introduced by Teuvo Kohonen in the 1980s SOMs have been developed as a very powerful method for visualization and unsupervised classification tasks by an active and innovative community of interna tional researchers A number of extensions and modifications have been developed during the last two decades The reason is surely not that the original algorithm was imperfect or inad equate It is rather the universal applicability and easy handling of the SOM Com pared to many other network paradigms only a few parameters need to be arranged and thus also for a beginner the network leads to useful and reliable results Never theless there is scope for improvements and sophisticated new developments as this book impressively demonstrates The number of published applications utilizing the SOM appears to be unending As the title of this book indicates the reader will benefit from some of the latest the oretical developments and will become acquainted with a number of challenging real world applications Our aim in producing this book has been to provide an up to date treatment of the field of self organizing neural networks which will be ac cessible to researchers practitioners and graduated students from diverse disciplines in academics and industry We are very grateful to the father of the SOMs Professor Teuvo Kohonen for sup porting this book and contributing the first chapter *Self-Organizing Maps* Teuvo Kohonen,2012-12-06 The second revised edition of this book was suggested by the impressive sales of the first edition Fortunately this enabled us to incorporate new important results that had just been obtained The ASSOM Adaptive Subspace SOM is a new architecture in which invariant feature detectors emerge in an unsupervised learning process Its basic principle was already introduced in the first edition but the motiva tion and theoretical discussion in the second edition is more thorough and consequent New material has been added to Sect 5 9 and this section has been rewritten totally Correspondingly Sect 1 4 which deals with adaptive subspace classifiers in general and constitutes the prerequisite for the ASSOM principle has also been extended and rewritten totally Another new SOM development is the WEBSOM a two layer architecture intended for the organization of very large collections of full text documents such as those found in the Internet and World Wide Web This architecture was published after the first edition came out The idea and results seemed to be so important that the new Sect 7 8 has now been added to the second edition Another addition that contains new results is Sect 3 15 which describes the acceleration in the computing of very large SOMs It was also felt that Chap 7 which deals with 80M applications had to be extended **Computational Architectures Integrating Neural and Symbolic Processes** Ron Sun,Lawrence A. Bookman,2007-08-19 Computational Architectures Integrating Neural and Symbolic Processes A Perspective on the State of the Art focuses on a currently emerging body of

research With the reemergence of neural networks in the 1980s with their emphasis on overcoming some of the limitations of symbolic AI there is clearly a need to support some form of high level symbolic processing in connectionist networks As argued by many researchers on both the symbolic AI and connectionist sides many cognitive tasks e g language understanding and common sense reasoning seem to require high level symbolic capabilities How these capabilities are realized in connectionist networks is a difficult question and it constitutes the focus of this book Computational Architectures Integrating Neural and Symbolic Processes addresses the underlying architectural aspects of the integration of neural and symbolic processes In order to provide a basis for a deeper understanding of existing divergent approaches and provide insight for further developments in this field this book presents 1 an examination of specific architectures grouped together according to their approaches their strengths and weaknesses why they work and what they predict and 2 a critique comparison of these approaches Computational Architectures Integrating Neural and Symbolic Processes is of interest to researchers graduate students and interested laymen in areas such as cognitive science artificial intelligence computer science cognitive psychology and neurocomputing in keeping up to date with the newest research trends It is a comprehensive in depth introduction to this new emerging field   *PARLE '94 Parallel Architectures and Languages Europe* Costas Halatsis,1994-06-08 This volume presents the proceedings of the 5th International Conference Parallel Architectures and Languages Europe PARLE 94 held in Athens Greece in July 1994 PARLE is the main Europe based event on parallel processing Parallel processing is now well established within the high performance computing technology and of stategic importance not only to the computer industry but also for a wide range of applications affecting the whole economy The 60 full papers and 24 poster presentations accepted for this proceedings were selected from some 200 submissions by the international program committee they cover the whole field and give a timely state of the art report on research and advanced applications in parallel computing   **Theory and Applications of Models of Computation** Manindra Agrawal,Ding-Zhu Du,Zhenhua Duan,Angsheng Li,2008-04-30 This proceedings volume examines all major areas in computer science mathematics especially logic and the physical sciences especially computation algorithms complexity and computability theory   **Trends in Artificial Intelligence** Salvatore Gaglio,1991-10-09 This book collects the scientific papers presented at the 2nd Congress of the Italian Association for Artificial Intelligence held in Palermo in October 1991 It displays the state of the art of both Italian and European scientific research in AI The book begins with an invited paper by W Wahlster et al The bulk of the book is then divided into five parts on Knowledge representation 18 papers Knowledge acquisition 5 papers Natural language 5 papers Perception and robotics 5 papers Architecture and technologies 5 papers A section containing short papers completes the book The high quality of the papers reflects massive research activity mainly devoted to the theoretical aspects of AI but clearly aimed at consolidating the results already achieved Several contributions are oriented to the technological aspects of AI   **Software Optimization for High-performance Computing** Kevin R.
