Concept Sourcebook A Vocabulary Of Architectural Forms:

Concept Sourcebook Edward T. White, 1975 Structure As Architecture Andrew Charleson, 2014-07-11 *Structure as Architecture* presents a comprehensive analysis of the indispensable role of structure in architecture. An exploration as well as a celebration of structure, the book draws on a series of design studies and case study examples to illustrate how structure can be employed to realize a wide range of concepts in contemporary architecture. By examining design principles that relate to both architecture and structural engineering, Andrew Charleson provides new insights into the relationship between both the technical and aesthetic aspects of architecture. Now in its second edition, the text has been extensively revised and updated throughout. Features include: A brand new chapter on hidden structure adding to the material on exposed structures. Two new chapters on using structure to realise common architectural concepts through a combination of precedents and creative design. Over 50 new case studies from across the globe. Easy to understand diagrams and a highly visual design to aid understanding and accessibility. More than two hundred case studies of contemporary buildings from countries such as the UK, the US, France, Germany, Spain, Hong Kong, Australia, and Japan illustrate how a thorough integration of structure adds layers of richness and enhances the realisation of architectural design concepts. **The Tectonics of Structural Systems**

Yonca Hurol, 2015-09-16 *The Tectonics of Structural Systems* provides an architectural approach to the theory of structural systems. The book combines structural recommendations to follow during the architectural design of various structural systems and the tectonic treatment of structural recommendations in architecture. Written expressly for students, the book makes structures understandable and useful, providing practical and useful knowledge about structures, a design-based approach to the subject of structures, and a bridge in the gap between structures and the theory of design. Good architectural examples for each structural system are given in order to demonstrate that tectonics can be achieved by applying technical knowledge about structures. Over 300 illustrations visually unpack the topics being explained, making the book ideal for the visual learner. Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1977 *Design for Adaptability in Mass Housing* Guopeng Li, 2020-11-05 Before discussing the research itself in greater depth, it is beneficial at this stage to introduce the background to the research. To do so, the chapter is divided into four parts. The first part of the chapter summarises terminologies associated with adaptability and goes on to define and elaborate on the meaning of adaptability in this research study. The second part of this chapter defines mass housing; the development of mass housing and its problems are also illustrated. In the third part, as the key solution for addressing housing occupants' requirements and accommodating changes, the importance of adaptability in improving overall housing quality, particularly from a social, financial, and environmental point of view, is outlined. The sustainability of adaptability is also discussed. Even though studies of adaptability have been developed structurally, functionally, technically, and financially, adaptability still occupies a marginal position due to the production of mass housing. The final part of the chapter rethinks the notion of adaptability for mass

housing Factors of mass housing related to social financial technical and design issues and which address adaptability are explored Lastly it is revealed that the design aspect of adaptability is chosen as the research focus in this research study
