**Concepts and Approaches in Animal Morphology** P. Dullemeijer, 1974 *Fish Morphology* Hiran M.

Dutta, 2017-11-13 Topics covered in this volume include transformation morphology on structures in the head of cichlid fishes the structure and function of fish liver atretic follicles and corpora lutea in the ovaries of fishes effects of gill dimension on respiration and the effects of pesticides on fish

### **Constructional Morphology and Evolution** Norbert

Schmidt-Kittler, Klaus Vogel, 2012-12-06 Constructional morphology explains features of organisms from a constructional and functional point of view By means of physical analysis it explains the operational aspects of organic structures how they can perform the activities organisms are expected to fulfil in order to survive in their environment Constructional morphology also explains options and constraints during the evolution determined by internal constructional needs ontogenetic demands inherited organizational preconditions and environmental clues

Ecological Morphology Peter C. Wainwright, Stephen M.

Reilly, 1994-08-15 Ecological morphology examines the relation between an animal's anatomy and physiology its form and function and how the animal has evolved in and can inhabit a particular environment Within the past few years research in this relatively new area has exploded Ecological Morphology is a synthesis of major concepts and a demonstration of the ways in which this integrative approach can yield rich and surprising results Through this interdisciplinary study scientists have been able to understand for instance how bat wing design affects habitat use and bat diet how the size of a predator affects its ability to capture and eat certain prey and how certain mosquitoes have evolved physiologically and morphologically to tolerate salt water habitats Ecological Morphology also covers the history of the field the role of the comparative method in studying adaptation and the use of data from modern organisms for understanding the ecology of fossil communities This book provides an overview of the achievements and potential of ecological morphology for all biologists and students interested in the way animal design ecology and evolution interact

*Functional Morphology in Vertebrate Paleontology* Jeff Thomason, 1997-10-28 Looks at how fossil vertebrates moved fed and reproduced

*Principles of Animal Design* Ewald R. Weibel, C. Richard Taylor, Liana Bolis, 1998-02-28 The book discusses whether animals are designed according to the same rules that engineers use in building machines

**The Character Concept in Evolutionary Biology** Günter P. Wagner, 2000-10-31 Almost all evolutionary biologists indeed all biologists use particular features to study life These characteristics or features used by evolutionary biologists are used in a particular way to unravel a tangled evolutionary history document the rate of evolutionary change or as evidence of biodiversity Characters are the data of evolutionary biology and they can be employed differently in research providing both opportunities and limitations The Character Concept in Evolutionary Biology is about characters their use how different sorts of characters are limited and what are appropriate methods for character analysis Leading evolutionary biologists from around the world are contributors to this authoritative review of the character concept Because characters and the conception of characters are central to all

studies of evolution and because evolution is the central organizing principle of biology this book will appeal to a wide cross section of biologists Focuses upon characters fundamental data for evolutionary biology Covers the myriad ways in which characters are defined described and distinguished Includes historical morphological molecular behavioral and philosophical perspectives Major Patterns in Vertebrate Evolution Max Hecht, 2013-11-11 This volume is the result of a NATO Advanced Study Institute held in England at Kingswood Hall of Residence Royal Holloway College London University Surrey during the last two weeks of July 1976 The ASI was organized within the guide lines laid down by the Scientific Affairs Division of the North Atlantic Treaty Organization During the past two decades significant advances have been made in our understanding of vertebrate evolution The purpose of the Institute was to present the current status of our knowledge of vertebrate evolution above the species level Since the subject matter was obviously too broad to be covered adequately in the limited time available selected topics problems and areas which are applicable to vertebrate zoology as a whole were reviewed The program was divided into three areas 1 the theory and methodology of phyletic inference and approaches to the analysis of macroevolutionary trends as applied to vertebrates 2 the application of these methodological principles and analytical processes to different groups and structures particularly in anatomy and paleontology 3 the application of these results to classification The basic principles considered in the first area were outlined in lectures covering the problems of character analysis functional morphology karyological evidence biochemical evidence morphogenesis and biogeography

*Architecture in Living Structure* G.A. Zweers, P. Dullemeijer, 2012-12-06 **Behavioural Mechanisms of Food**

**Selection** Roger N. Hughes, 2013-06-29 Behavioural Mechanisms of Food Selection examines animals belonging to diverse trophic groups from carnivores herbivores micro algal grazers to filter feeders and detritus feeders In the past Optimal Foraging Theory has been applied to all these groups but in different ways and in disciplines that rarely overlap Here concepts and developments hitherto scattered in the literature are drawn together This uniquely broad synthesis captures the state of the art in the study of diet selection and prescribes new objectives in theoretical development and research

**Evolutionary Biology** Max K. Hecht, Ross J. MacIntyre, Michael T. Clegg, 2012-12-06 After volume 33 this book series was replaced by the journal Evolutionary Biology Please visit [www.springer.com/11692](http://www.springer.com/11692) for further information This volume continues bringing to readers the findings of eminent evolutionary biologists and paleobiologists Among the topics discussed in this book are the origin of the dermal skeleton in conodont chordates patterns of nucleotide substitution and codon usage in plasmid DNA evolution a model to explain phenotype stability in functional systems and inter island speciation of Hawaiian biota Vertebrate Functional Morphology Hiran M. Dutta, J. S. Datta Munshi, 2001 Dealing with important systems starting from lower vertebrates to mammals this book covers topics including morphological biochemical and molecular aspects of cartilages of the skeleton of sea lamprey evolutionary transformation of respiratory islets of airbreathing fish and more

*Reconstructing Behavior in the Primate Fossil Record* J. Michael Plavcan, Richard F. Kay, William L. Jungers, Carel P. van Schaik, 2012-12-06 This volume brings together a series of papers that address the topic of reconstructing behavior in the primate fossil record The literature devoted to reconstructing behavior in extinct species is overwhelming and very diverse Sometimes it seems as though behavioral reconstruction is done as an afterthought in the discussion section of papers relegated to the status of informed speculation But recent years have seen an explosion in studies of adaptation functional anatomy comparative sociobiology and development Powerful new comparative methods are now available on the internet At the same time we face a rapidly growing fossil record that offers more and more information on the morphology and paleoenvironments of extinct species Consequently inferences of behavior in extinct species have become better grounded in comparative studies of living species and are becoming increasingly rigorous We offer here a series of papers that review broad issues related to reconstructing various aspects of behavior from very different types of evidence We hope that in so doing the reader will gain a perspective on the various types of evidence that can be brought to bear on reconstructing behavior the strengths and weaknesses of different approaches and perhaps new approaches to the topic We define behavior as broadly as we can including life history traits locomotion diet and social behavior giving the authors considerable freedom in choosing what exactly they wish to explore

*Feeding* Kurt Schwenk, 2000-08-03 As the first four legged vertebrates called tetrapods crept up along the shores of ancient primordial seas feeding was among the most paramount of their concerns Looking back into the mists of evolutionary time fish like ancestors can be seen transformed by natural selection and other evolutionary pressures into animals with feeding habitats as varied as an anteater and a whale From frog to pheasant and salamander to snake every lineage of tetrapods has evolved unique feeding anatomy and behavior Similarities in widely divergent tetrapods vividly illustrate their shared common ancestry At the same time numerous differences between and among tetrapods document the power and majesty that comprises organismal evolutionary history Feeding is a detailed survey of the varied ways that land vertebrates acquire food The functional anatomy and the control of complex and dynamic structural components are recurrent themes of this volume Luminaries in the discipline of feeding biology have joined forces to create a book certain to stimulate future studies of animal anatomy and behavior

**Functional Vertebrate Morphology** Milton Hildebrand, 1985

**The Pelvis** Enrico Marani, Wijnand F.R.M. Koch, 2014-02-13 This book offers a critical review of the pelvic sciences past present and future from an anatomical and physiological perspective and is intended for researchers medical practitioners and paramedical therapists in the fields of urology gynecology and obstetrics proctology physiotherapy as well as for patients The book starts with a construction plan of the pelvis and shows its structural consequences The historical background of pelvic studies proceeds from medieval and early Italian models to the definitive understanding of the pelvic anatomy in the Seventeenth century During these eras of pelvic research concepts and approaches developed that are illustrated with examples from comparative anatomy and from mutations also with regard to

the biomechanics of pelvic structures Perceptions of the pelvis as an important element in sexual arousal and mating conduct are discussed as well as attitudes to circumcision castration and other mutilations in its anthropological social context The anatomy and physiology of the pelvic wall and its organs as well as the development of these pelvic organs are covered as a prerequisite to understanding for example the spread of pelvic carcinoma and male and female bladder muscle function Connective pelvic tissue is examined in its reinforcing capacity for pelvic structures but also as a hiding place for infections Innervations and reflexes relayed through the pelvic nerves are discussed in order to explain incontinence sphincter function and the control of smooth and striated muscles in the pelvis Catheters and drugs acting on pelvic function are described and a critical review of alternative clinical methods for treating pelvic dysfunctions is provided      *Feeding in Domestic Vertebrates* V. L. Bels, 2006 Domestication of vertebrates is based on the understanding of the needs of animals in their natural environment Thus the success of this domestication throughout human history is largely dependant of the knowledge of the animal feeding behaviour The aim of this volume is to provide advanced students and researchers with a review of current knowledge of feeding in domestic mammals and birds The book also presents chapters on feeding behaviour in particular species the scope is wide covering not only ruminants poultry and pigs but also more specifically horses rabbits and ostrich Contributors include leading research workers from Europe USA Australia and South Africa      National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1971      Bibliography of the History of Medicine ,
