

CONCEPTS

DEFINITION

A concept is a mental representation or idea that categorizes objects, events, or relations based on common properties or characteristics. It serves as a building block of human cognition, allowing for understanding, prediction, and reasoning.

EXAMPLES

- Concrete Concepts
- Abstract Concepts
- Artificial Concepts
- Self-Concept
- Theoretical Concepts
- Relational Concepts
- Negative Concepts

Concepts And Categories

Michel Aurnague & Laure Vieu

Concepts And Categories:

Knowledge Concepts and Categories Koen Lamberts, 2013-10-28 Knowledge Concepts and Categories brings together an overview of recent research on concepts and knowledge that abstracts across a variety of specific fields of cognitive psychology Readers will find data from many different areas developmental psychology formal modelling neuropsychology connectionism philosophy and so on The book can be divided into three parts Chapters 1 to 5 each contain a thorough and systematic review of a significant aspect of research on concepts and categories Chapters 6 to 9 are concerned primarily with issues related to the taxonomy of human knowledge Finally Chapters 10 to 12 discuss formal models of categorization and function learning The purpose of these three chapters is to provide a few examples of current formal modelling of conceptual behaviour Knowledge Concepts and Categories will be welcomed by students and researchers in cognitive psychology and related areas as an unusually wide ranging and authoritative review of an important subfield of psychology

Categories and Concepts Edward E. Smith, Douglas L. Medin, 2013-10-01 **Concepts and Categories** Michael T. Hannan, Gaël Le Mens, Greta Hsu, Balázs Kovács, Giacomo Negro, László Pólos, Elizabeth Pontikes, Amanda J. Sharkey, 2019-08-13 Why do people like books music or movies that adhere consistently to genre conventions Why is it hard for politicians to take positions that cross ideological boundaries Why do we have dramatically different expectations of companies that are categorized as social media platforms as opposed to news media sites The answers to these questions require an understanding of how people use basic concepts in their everyday lives to give meaning to objects other people and social situations and actions In this book a team of sociologists presents a groundbreaking model of concepts and categorization that can guide sociological and cultural analysis of a wide variety of social situations Drawing on research in various fields including cognitive science computational linguistics and psychology the book develops an innovative view of concepts It argues that concepts have meanings that are probabilistic rather than sharp occupying fuzzy overlapping positions in a conceptual space Measurements of distances in this space reveal our mental representations of categories Using this model important yet commonplace phenomena such as our routine buying decisions can be quantified in terms of the cognitive distance between concepts Concepts and Categories provides an essential set of formal theoretical tools and illustrates their application using an eclectic set of methodologies from micro level controlled experiments to macro level language processing It illuminates how explicit attention to concepts and categories can give us a new understanding of everyday situations and interactions **Percepts, Concepts and Categories** B. Burns, 1992-10-09 The most important distinction derived from the computational view of thought is between structures and processes So proclaimed Farah and Kosslyn in 1982 arguing that structures and processes cannot be examined in isolation and concluding that converging operations are required to isolate the structure process pair that can explain a particular finding The distinction between structure and process within the study of percepts concepts and categories is considered in depth in this volume with

penetrating commentaries by fellow authors concluding each chapter This interesting format achieves a broad coverage of the various aspects and implications of the structure process distinction It affords a salient indication of the diversity of positions as to the description and utility of distinguishing structures and processors At the same time it reveals that researchers specializing in areas of study ranging from simple structure and process involved in perceptual organization and texture to complex structure and process associated with reading graphs and chess expertise do utilize such a distinction in similar ways The analysis is organized into four major parts within the book Early Visual Representation and Processing Percepts Concepts Categories and Development Categories Concepts and Learning and Higher Order Representation and Processing

Early Category and Concept Development : Making Sense of the Blooming, Buzzing Confusion David H. Rakison Assistant Professor of Psychology Carnegie Mellon University, Lisa M. Oakes Associate Professor of Psychology University of Iowa, 2003-01-09 Whether or not infants earliest perception of the world is a blooming buzzing confusion it is not long before they come to perceive structure and order among the objects and events around them At the core of this process and cognitive development in general is the ability to categorize to group events objects or properties together and to form mental representations or concepts that encapsulate the commonalities and structure of these categories Categorization is the primary means of coding experience underlying not only perceptual and reasoning processes but also inductive inference and language The aim of this book is to bring together the most recent findings and theories about the origins and early development of categorization and conceptual abilities Despite recent advances in our understanding of this area a number of hotly debated issues remain at the center of the controversy over categorization Researchers continue to ask questions such as Which mechanisms for categorization are available at birth and which emerge later What are the relative roles of perceptual similarity and nonobservable properties in early classification What is the role of contextual variation in categorization by infants and children Do different experimental procedures reveal the same kind of knowledge Can computational models simulate infant and child categorization How do computational models inform behavioral research What is the impact of language on category development How does language partition the world This book is the first to address these and other key questions within a single volume The authors present a diverse set of views representing cutting edge empirical and theoretical advances in the field The result is a thorough review of empirical contributions to the literature and a wealth of fresh theoretical perspectives on early categorization

Early Category and Concept Development David H. Rakison, Lisa M. Oakes, 2008-12-30 Whether or not infants earliest perception of the world is a blooming buzzing confusion it is not long before they come to perceive structure and order among the objects and events around them At the core of this process and cognitive development in general is the ability to categorize to group events objects or properties together and to form mental representations or concepts that encapsulate the commonalities and structure of these categories Categorization is the primary means of coding experience underlying not only perceptual and reasoning processes

but also inductive inference and language The aim of this book is to bring together the most recent findings and theories about the origins and early development of categorization and conceptual abilities Despite recent advances in our understanding of this area a number of hotly debated issues remain at the center of the controversy over categorization Researchers continue to ask questions such as Which mechanisms for categorization are available at birth and which emerge later What are the relative roles of perceptual similarity and nonobservable properties in early classification What is the role of contextual variation in categorization by infants and children Do different experimental procedures reveal the same kind of knowledge Can computational models simulate infant and child categorization How do computational models inform behavioral research What is the impact of language on category development How does language partition the world This book is the first to address these and other key questions within a single volume The authors present a diverse set of views representing cutting edge empirical and theoretical advances in the field The result is a thorough review of empirical contributions to the literature and a wealth of fresh theoretical perspectives on early categorization

Concepts and Conceptual Development Ulric Neisser, 1989-03-31 *Concepts and Conceptual Development* draws together a wide range of theorists to consider many different aspects of the psychology of concepts

The Nature of Concepts Philip Van Looke, 2012-10-12 *The Nature of Concepts* examines a central issue for all the main disciplines in cognitive science how the human mind creates and passes on to other human minds a concept An excellent cross disciplinary collection with contributors including Steven Pinker Andy Clarke and Henry Plotkin

The Making of Human Concepts Denis Mareschal, Paul C. Quinn, S. E. G. Lea, 2010 Human adults appear different from other animals in their ability to form abstract mental representations that go beyond perceptual similarity In short they can conceptualize the world This apparent uniqueness leads to an immediate puzzle WHEN and HOW does this abstract system come into being To answer this question we need to explore the origins of adult concepts both developmentally and phylogenetically When does the developing child acquire the ability to use abstract concepts Does the transition occur around 2 years with the onset of symbolic representation and language Or is it independent of the emergence of language When in evolutionary history did an abstract representational system emerge Is there something unique about the human brain How would a computational system operating on the basis of perceptual associations develop into a system operating on the basis of abstract relations Is this ability present in other species but masked by their inability to verbalise abstractions Perhaps the very notion of concepts is empty and should be done away with altogether This book tackles the age old puzzle of what might be unique about human concepts Intuitively we have a sense that our thoughts are somehow different from those of animals and young children such as infants Yet if true this raises the question of where and how this uniqueness arises What are the factors that have played out during the life course of the individual and over the evolution of humans that have contributed to the emergence of this apparently unique ability This volume brings together a collection of world specialists who have grappled with these

questions from different perspectives to try to resolve the issue It includes contributions from leading psychologists neuroscientists child and infant specialists and animal cognition specialists Taken together this story leads to the idea that there is no unique ingredient in the emergence of human concepts but rather a powerful and potentially unique mix of biological abilities and personal and social history that has led to where the human mind now stands A must read for students and researchers in the cognitive sciences *The Oxford Handbook of Thinking and Reasoning* Keith J. Holyoak, Robert G. Morrison, 2013-05-23 The Oxford Handbook of Thinking and Reasoning brings together the contributions of many of the leading researchers in thinking and reasoning to create the most comprehensive overview of research on thinking and reasoning that has ever been available **Typology and Universals** William Croft, 2003 A thorough rewriting to reflect advances in typology and universals in the past decade Cyber-Physical-Social Intelligence Hai Zhuge, 2020-11-12 This book explores next generation artificial intelligence based on the symbiosis between humans machines and nature including the rules and emerging patterns of recognition and the integration and optimization of various flows through cyberspace physical space and social space It unveils a reciprocal human machine nature symbiotic mechanism together with relevant rules on structuring and evolving reality and also proposes a multi dimensional space for modelling reality and managing the methodologies for exploring reality As such it lays the foundation for the emerging research area cyber physical social intelligence Inspiring researchers and university students to explore the development of intelligence and scientific methodology it is intended for researchers and broad readers with a basic understanding of computer science and the natural sciences Next generation artificial intelligence will extend machine intelligence and human intelligence to cyber physical social intelligence rendered by various interactions in cyberspace physical space and social space With the transformational development of science and society a multi dimensional reality is emerging and evolving leading to the generation and development of various spaces obeying different principles A fundamental scientific challenge is uncovering the essential mechanisms and principles that structure and evolve the reality emerging and evolving along various dimensions Meeting this challenge requires identifying the basic relations between humans machines and nature in order to reveal the cyber physical social principles **Classification from Antiquity to Modern Times** Tanja Pommerening, Walter Bisang, 2017-09-11 The volume presents phenomena of classification and categorisation in ancient and modern cultures and provides an overview of how cultural practices and cognitive systems interact when individuals or larger groups conceptually organize their world Scientists of antiquity studies anthropologists linguists etc will find methods to reconstruct early concepts of men and nature from a synchronic and diachronic comparative perspective *The Semantics of Prepositions* Michel Aurnague & Laure Vieu, 1993 A reconsideration of the semantics of a lexical category prepositions that has recently witnessed a plethora of investigations The volume approaches the issue first from a more general perspective namely the extent to which insights into the meaning of prepositions give clues to the semantic structure of lexical units and its

processing in general It goes on to deal with the meaning of prepositions from the perspective of how natural language processing can benefit from the insights of theoretical linguistics especially with respect to machine translation and image understanding Most of the papers were originally presented at a workshop held in February 1990 at the Institut fur Angewandte Informationsforschung Annotation copyright by Book News Inc Portland OR *Public Use Samples of Basic Records from the 1970 Census* United States. Bureau of the Census,1972 **Language, Logic, and Concepts** Ray Jackendoff,Paul Bloom,Karen Wynn,2002 A wide ranging collection of essays inspired by the memory of the cognitive psychologist John Macnamara **Stevens' Handbook of Experimental Psychology and Cognitive Neuroscience, Language and Thought** ,2018-03-13 III Language discourse and dialogue reading creativity speech production concepts and categorization culture and cognition reasoning sentence processing bilingualism speech perception spatial cognition word processing semantic memory moral reasoning Law and Cognitive Linguistics Mateusz Zeifert,2024-10-10 This book advances the prototype theory of categorisation within a legal context The work adopts a multidisciplinary approach and draws on insights from cognitive psychology cognitive linguistics and analytic philosophy to discuss semantic problems present in law Designed as a bridge between cognitive linguistics and legal theory it argues that categorisation is a crucial cognitive operation for the application of law and that theories of categorisation are relevant to legal theory It makes the case that the prototype approach is better suited than more formal approaches usually utilised in jurisprudence to explaining many familiar linguistic problems found in law such as vagueness polysemy the flexibility of meaning the generality of language context dependence of meaning linguistic indeterminacy and so on The book focuses on problems of semantic analysis in law both in concrete cases that is particular cases before courts and at the theoretical level on methods of statutory interpretation It will be a valuable resource for academics and researchers working in the areas of Law and Language Legal Theory Legal Philosophy and Legal Linguistics **Sociological Terminology and Classification Schemes** Lalit P. Pathak,2000 **Cognitive Psychology in a Changing World** Linden J. Ball,Laurie T. Butler,Susan M. Sherman,Helen St Clair-Thompson,2023-12-07 This unique textbook explores core cognitive psychology topics from an innovative new perspective focusing on key real world issues to show how we understand and experience the world The book examines compelling topics such as creativity problem solving reasoning rationality and language all within the context of modern 21st century life Each chapter demonstrates how this vibrant and constantly evolving discipline is at the heart of some of the biggest issues facing us all today The last chapter discusses the future of cognitive psychology which includes guidance on conducting rigorous replicable research and how to use skills from cognitive psychology to be an effective student Packed with pedagogical features each chapter includes boxed examples of cognitive psychology in the real world and engaging try it yourself features Each chapter also includes objectives a range of illustrative figures chapter summaries key readings and a glossary for ease of use The book is fully supported by original online resources for students and

instructors Offering a new model for the study of cognitive psychology that brings the subject alive the book is essential reading for all students studying psychology and related disciplines

Decoding **Concepts And Categories**: Revealing the Captivating Potential of Verbal Expression

In a time characterized by interconnectedness and an insatiable thirst for knowledge, the captivating potential of verbal expression has emerged as a formidable force. Its capability to evoke sentiments, stimulate introspection, and incite profound transformations is genuinely awe-inspiring. Within the pages of "**Concepts And Categories**," a mesmerizing literary creation penned by way of a celebrated wordsmith, readers attempt an enlightening odyssey, unraveling the intricate significance of language and its enduring impact on our lives. In this appraisal, we shall explore the book's central themes, evaluate its distinctive writing style, and gauge its pervasive influence on the hearts and minds of its readership.
