Concepts In Biochemistry:

Concepts in Biochemistry Rodney F. Boyer, 1998 Rodney Boyer's text gives students a modern view of biochemistry. He utilizes a contemporary approach organized around the theme of nucleic acids as central molecules of biochemistry with other biomolecules and biological processes treated as direct or indirect products of the nucleic acids. The topical coverage usually provided in current biochemistry courses is all present only the sense of focus and balance of coverage has been modified. The result is a text of exceptional relevance for students in allied health fields, agricultural studies and related disciplines. *Concepts in Biochemistry* Francis J. Reithel, 1967 Basic Concepts in Biochemistry: A Student's Survival Guide Hiram F. Gilbert, 2000 Basic Concepts in Biochemistry has just one goal to review the toughest concepts in biochemistry in an accessible format so your understanding is thorough and complete. **BOOK JACKET** **Concepts in Biochemistry**, 1964 **Basic Concepts in Biochemistry** Hiram F. Gilbert, 1992 A new addition to the PreTest product line, this review book covers only those topics in biochemistry which through the author's experience, market research and in-depth reviewing were viewed by medical students as being most difficult to comprehend. The text is organized by general concepts which are then subdivided in order of increasing complexity. Each section begins with a short summary of key points. The book's unique approach stresses the mastering of fundamental concepts instead of just the memorization of facts. Thus the student is encouraged to reason through problems and to better retain what he/she learns in the course. This text can be used in concert with the sixth edition of PreTest Biochemistry to form an excellent review source for students taking biochemistry exams or Part I of the National Board Exam. **Concepts in Biochemistry** R. Boyer, 2001-10-01 Intended for the one semester sophomore/junior level course, Boyer's text is written for a range of majors including Chemistry, Biology, Food Science, Agriculture, Pharmacy and Environmental Studies. It is also appropriate for use in one-term Biochemistry courses now required for certification by the American Chemical Society. Prerequisites for the course include General and Organic Chemistry. Boyer enhances the understanding of biological processes by initiating the study of Biochemistry with nucleic acids, especially DNA, playing a more central role. Other biomolecules are treated as direct or indirect products. It is an approach that captures the student's attention by giving them a current and practical sense of Biochemistry and presenting applications that can be used in their careers. This focus makes the text particularly relevant for students in allied health, agriculture and related programs. An accompanying interactive CD-ROM Web site provides additional opportunity for study and enrichment. It contains Animations, Concept Reviews, Cutting Edge Biochemistry, Materials and Structural Tutorials. *Concepts in Biochemistry* William Kay Stephenson, 1967 **Modern Concepts in Biochemistry** Robert C.
