

moments could be e.g. to increase the “internal lever arm” of the arch, for example by creating a trussed arch, such as that of Figure 21, or by choosing an arch structure, where each half consists of a laminar truss, see Figure 21 (b).

Fig. 21: Arch structures subjected to triangular load distribution. (a) Concrete arch structure; (b) arch structure consisting of two laminar trusses connected at the ridge. The effect of relatively large local bending moments M (near r) can significantly be reduced by choosing a structure with larger internal lever arm (case b).

The three-hinged arch is the most common type of gable arch. Therefore, only indications concerning the design of such types of arches will be given in the next sections.

Conceptual design

Generally, architectural considerations determine the shape and possibly the rise of the arch. However, for economic reasons and also in order to limit the horizontal thrust, some “rules of thumb” concerning depth-to-span ratios, maximum span etc. should be followed. Figure 22 gives indications for preliminary design of three typical arch profiles.

Two-hinge arch

(two- or three-hinge)

(c)

Fig. 22: Preliminary design guidance for three different arch types.

Design of three-hinged arches

The three-hinged arch is stable against horizontal forces in its own plane and statically determinate, which means that the moment distribution is not affected by uneven settlement of the foundations or by unformous deformations in joints and connections. Further, the three-hinged arch has hinges at the springing points, which simplifies the construction of the foundations. In poor soil conditions, the horizontal reactions at the supports can be taken by tension members between the foundations (located within or under the slab).

Stability concern

Arches are as a rule slender structures and the design must therefore – even to a larger extent than for frames – be carried out by taking the risk of buckling into account, i.e. both in-plane and out-of-plane buckling.

Case Studies on Failure

Investigations in Structural and Geotechnical Engineering Fabrizio Palmisano,Laurent Rus,2023-09-14 Failures of structures occur in all parts of the world as the result of design errors construction defects abuse or misuse ageing and deterioration of the structure lack of maintenance as well as environmental effects such as wind flood snow earthquake and of course human errors They can result in catastrophic human costs as well as heavy financial losses to all involved including local economic growth deceleration expensive delays and repairs as well as other repercussions such as legal actions to responsible parties Welcome effects of these unfortunate events include a better understanding of the origins and causes of structural failures their corresponding lessons learnt and a more effective mitigation of their occurrence through changes in codes standards guidelines and practice In several countries the investigation process of the causes of failures responsibilities and resolution of the consequent claims have created an active demanding and specialised field of professional practice often referred to as Forensic Structural Engineering with well defined technical and legal procedures This bulletin is the result of the work lead by the Task Group 5 1 Forensic Structural Engineering It provides understanding of the origins causes and consequences of failures their forensic investigations and the lessons learnt from them The aim of the bulletin is not only to describe different examples but mainly to use emblematic case studies to show procedures that can be used when dealing with structural failures In addition to obtaining a deeper insight into the technical causes for structural failure the reader would be duly informed about the different countries legal issues related to the investigation process The bulletin is aimed at young mid career and experienced structural engineers who want to acquire a better understanding of failure mechanisms towards improving their design inspection construction administrative and other project related
