The Changing Image of the Sciences Ida H. Stamhuis, Teun Koetsier, Cornelis De Pater, Albert Van Helden, 2012-12-06 The title of our book would lead the reader to believe that in speaking of the changing image of the sciences we are taking for granted the multiplicity of sciences as these are practiced for instance in modern universities That was of course not always the case Although we can point to some subjects for instance mathematical astronomy as being demarcated to some extent from other subjects as far back as Antiquity the current division into individual sciences can hardly be traced back further than the nineteenth century Moreover the further we go back in history the more we must subsume science under general knowledge or scholarship scientia Some of the earliest images of episteme or scientia are those of forbidden knowledge often related to technology on the one hand and the absent minded scholar on the other These are powerful metaphors in word as well as image that have been appropriated in various ages for different purposes The Greeks gave Western society its first images of the power of knowledge and those who produced it Prometheus ridiculed the gods stole their fire and brought it down to Earth For this Zeus had him chained to a rock on Mount Caucasus where a vulture fed on his liver during the day while it grew back at night He was finally freed by Heracles

National Aeronautics and Space Administration,1968 **Aspects of Metaphor in Physics** Hanna Pulaczewska,2011-05-03 With reference to copious case studies this book attempts to give a broad and comprehensive view of the multiplicity of forms taken by metaphor in physics A diachronic presentation of the views hitherto advanced on the role of metaphor in the natural sciences provides an introduction to the crucial issues By means of a broad definition of metaphor as a lexical semantic and conceptual phenomenon metaphor is identified at various levels of physics discourse in metatheory and methodology in the sociology of the origin and evolution of science in theory and conceptualization including physics models in education and finally in linguistic expression including terminology Whereas historians and theoreticians of science reduce the question of metaphor in physics to the question of the role of scientific models where one area of physics provides concepts and structures for another area the perspective adopted here is that of cognitive semantics The study inquires into the way in which concept formation and terminology in physics avails itself of the metaphoric bent immanent in everyday language conceptualizing abstract ideas in spatial terms inanimate things as intelligent measurable phenomena in terms of the visual Attention is also given to the way in which metaphoric processes make it possible to integrate new knowledge into old and sometimes obsolete structures rather than eliminating those structures altogether *Profiles of the Nutrients*Ñ3. *Water-Soluble and Fat-Soluble Vitamins* Richard Rydon,2016-10-02 Part 3 of Profiles of the Nutrients by Richard Rydon covers the Water Soluble and Fat Soluble Vitamins required by the human body The topics considered include the fourteen known vitamins and some nonvitamins In all the series comprises three books The first part deals with Carbohydrates Lipids and Proteins And the second part deals with Minerals and Trace Elements **Profiles of the Nutrients**Ñ2. **Minerals and Trace Elements** Richard Rydon,2017-02-07 Part 2 of Profiles of the Nutrients by Richard Rydon covers the Minerals and Trace Elements required by the human body The topics considered include the six major Minerals and eighteen Trace Elements In all the series comprises three books The first part deals with
