Beaudoin, 1982-04-14 Concrete one of the oldest and most versatile of manufactured building materials has been extensively researched in recent years Existing books on the subject tend to be devoted to either the chemistry of cement or concrete technology Concrete Science aims to bridge this gap providing a handbook for concrete technologists engineers architects and material scientists as well as users and manufacturers of cement For designers and students of material science this publication should aid the use of these new materials as well as encouraging further research in the field *Concrete Science* Vangipuram Seshachar

Ramachandran, Rolf F. Feldman, J. J. Beaudoin, 1981 **Handbook of Analytical Techniques in Concrete Science and Technology** V.S. Ramachandran, J.J. Beaudoin, 2000-11-01 Measuring the long term durability of new types of concrete and concrete technologies is crucial to their acceptance in the marketplace This long needed handbook of analytical techniques provides a complete reference to the cutting edge procedures used to test today s innovative materials Ranging from chemical and thermal analysis to IR and Nuclear Magnetic Resonance spectroscopy to Scanning Electron Microscopy x ray diffraction computer modeling and more the book provides first hand explanations of modern methods contributed by 24 leading scientists many of whom actually developed or refined the techniques The book includes many analytic techniques applied to a wide range of organic inorganic and composite materials and additives Perfect for practitioners students and professional standards writers the handbook is highly useful for scrutinizing materials in a variety of environments It takes into account the many factors that affect the qualities of concrete temperature pore and pore size distribution surface area and exposure gathering diverse evaluation methods into one convenient resource *Lea's Chemistry of Cement and Concrete* Peter Hewlett, 2003-11-12 Lea s Chemistry of Cement and Concrete deals with the chemical and physical properties of cements and concretes and their relation to the practical problems that arise in manufacture and use As such it is addressed not only to the chemist and those concerned with the science and technology of silicate materials but also to those interested in the use of concrete in building and civil engineering construction Much attention is given to the suitability of materials to the conditions under which concrete can excel and those where it may deteriorate and to the precautionary or remedial measures that can be adopted First published in 1935 this is the fourth edition and the first to appear since the death of Sir Frederick Lea the original author Over the life of the first three editions this book has become the authority on its subject The fourth edition is edited by Professor Peter C Hewlett Director of the British Board of Agreement and visiting Industrial Professor in the Department of Civil Engineering at the University of Dundee Professor Hewlett has brought together a distinguished body of international contributors to produce an edition which is a worthy successor to the previous editions *Cementitious Materials for Nuclear Waste Immobilization* Rehab O. Abdel Rahman, Ravil Z. Rakhimov, Nailia R. Rakhimova, Michael I. Ojovan, 2014-11-17 Cementitious materials are an essential part in any radioactive waste disposal

facility Conditioning processes such as cementation are used to convert waste into a stable solid form that is insoluble and will prevent dispersion to the surrounding environment It is incredibly important to understand the long term behavior of these materials This book summarises approaches and current practices in use of cementitious materials for nuclear waste immobilisation It gives a unique description of the most important aspects of cements as nuclear waste forms starting with a description of wastes analyzing the cementitious systems used for immobilization and describing the technologies used and ending with analysis of cementitious waste forms and their long term behavior in an envisaged disposal environment Extensive research has been devoted to study the feasibility of using cement or cement based materials in immobilizing and solidifying different radioactive wastes However these research results are scattered This work provides the reader with both the science and technology of the immobilization process and the cementitious materials used to immobilize nuclear waste It summarizes current knowledge in the field and highlights important areas that need more investigation The chapters include Introduction Portland cement Alternative cements Cement characterization and testing Radioactive waste cementation Waste cementation technology Cementitious wasteform durability and performance assessment

interrelationships between physical chemical mechanical and durability characteristics Information on the application of thermal analysis to construction materials is dispersed in literature and hence the IRC scientists embarked on producing a handbook the first of its kind incorporating the latest knowledge available in this field of activity Almost all important construction materials have been included

Unique Polymeric Fiber and Fiber Delivery Systems for the Economic Preparation of High-fiber Content Concrete with Superior Physical Properties Billy D. Neeley, Donna C. Day, James E. Shoenberger, 1998 This report documents the results from an investigation of a new polymer fiber and unique delivery system for charging fibers into concrete mixtures The straight Polyolefin fibers are available in two sizes 1 0 63 mm in diameter and 50 mm long and 2 0 38 mm in diameter and 25 mm long Each of the two sizes of fibers is packaged in bundles approximately 50 mm in diameter Each bundle is encased with paper tape bound with a water soluble glue The fibers are charged into the concrete mixture in mass Approximately 3 to 10 min of mixing time is necessary to uniformly distribute the fibers throughout the concrete mixture depending upon the fiber content consistency of the concrete mixture and the type of mixer being used Fresh and hardened properties were evaluated in mixtures containing up to 15 kg cu m The results indicate that concrete mixtures with the Polyolefin fibers can be produced having adequate workability and finishability if proportioned properly Addition of the Polyolefin fibers does not significantly influence the compressive nor first crack flexural strength freezing and thawing resistance drying shrinkage nor the chloride permeability of concrete mixtures However the presence of the Polyolefin fibers does influence the post crack behavior of concrete mixtures Impact resistance and flexural toughness are improved as the fiber loading increases A 6 100 m whitetopping demonstration project was constructed on a heavily traveled interstate in Mississippi The whitetopping was 100 mm thick Details of the specifications construction and early time performance are given
