Spinning, Weaving, Finishing and Printing (3rd Revised Edition) NIIR Board of Consultants & Engineers, 2017-09-09

Textile industry is one of the few basic industries which is characterised as a necessary component of human life. One may classify it as a more glamorous industry but whatever it is, it provides with the basic requirement called clothes. Spinning is the process of converting cotton or manmade fibre into yarn to be used for weaving and knitting. Weaving is a method of textile production in which two distinct sets of yarns or threads are interlaced at right angles to form a fabric or cloth. Finishing refers to the processes that convert the woven or knitted cloth into a usable material. Printing is the process of applying colour to fabric in definite patterns or designs. The textile industry occupies an important position in the total volume of merchandise trade across countries. Developing countries account for little over two-thirds of world exports in textiles and clothing. It is the second largest employer after agriculture, providing employment to over 45 million people directly and 60 million people indirectly. The future for the textile industry looks promising, buoyed by both strong domestic consumption as well as export demand. This book is based on the latest technology involved in the textile industry, which describes the processes available at the spinning and fabric forming stages, coupled with the complexities of the finishing and colouration processes to the production of wide ranges of products. The major contents of the book are: dyeing of textile materials, principles of spinning process, preparatory to spinning, principles of weaving, textile chemicals, yarn preparation, weaving and woven fabrics, knitting and knit fabrics, nonconventional fabrics, cellulosics, mixed fibers, printing compositions, printing processes, transfer dyes, transfer inks, etc. It describes the manufacturing processes and photographs of plant machinery with suppliers' contact details. It will be a standard reference book for professionals, entrepreneurs, textile mill owners, those studying and researching in this important area, and others interested in the field of textile industry.
