A Decade of Concurrency J.W.de Bakker, W.-P.de Roever, G.

Rozenberg, 1994-06-28 The REX School Symposium A Decade of Concurrency Reflections and Perspectives was the final event of a ten year period of cooperation between three Dutch research groups working on the foundations of concurrency Ever since its inception in 1983 the goal of the project has been to contribute to the cross fertilization between formal methods from the fields of syntax semantics and proof theory aimed at an improved understanding of the nature of parallel computing The material presented in this volume was prepared by the lecturers and their coauthors after the meeting took place In total the volume constitutes a thorough state of the art report of the research activities in concurrency

Data Refinement W.-P. de Roever, Kai Engelhardt, 1998-12-03

The goal of this book is to provide a comprehensive and systematic introduction to the important and highly applicable method of data refinement and the simulation methods used for proving its correctness The authors concentrate in the first part on the general principles needed to prove data refinement correct They begin with an explanation of the fundamental notions showing that data refinement proofs reduce to proving simulation The book's second part contains a detailed survey of important methods in this field which are carefully analysed and shown to be either incomplete with counterexamples to their application or to be always applicable whenever data refinement holds This is shown by proving for the first time that all these methods can be described and analysed in terms of two simple notions forward and backward simulation The book is self contained going from advanced undergraduate level and taking the reader to the state of the art in methods for proving simulation

Distributed Computing Pierre Fraigniaud, 2005-10-11

Handbook of Process Algebra J.A. Bergstra, A. Ponse, S.A. Smolka, 2001-03-16 Process Algebra is a formal description technique for complex computer systems especially those involving communicating concurrently executing components It is a subject that concurrently touches many topic areas of computer science and discrete math including system design notations logic concurrency theory specification and verification operational semantics algorithms complexity theory and of course algebra This Handbook documents the fate of process algebra since its inception in the late 1970 s to the present It is intended to serve as a reference source for researchers students and system designers and engineers interested in either the theory of process algebra or in learning what process algebra brings to the table as a formal system description and verification technique The Handbook is divided into six parts spanning a total of 19 self contained Chapters The organization is as follows Part 1 consisting of four chapters covers a broad swath of the basic theory of process algebra Part 2 contains two chapters devoted to the sub specialization of process algebra known as finite state processes while the three chapters of Part 3 look at infinite state processes value passing processes and mobile processes in particular Part 4 also three chapters in length explores several extensions to process algebra including real time probability and priority The four chapters of Part 5 examine non interleaving process algebras while Part 6 s three chapters address process algebra tools and applications

Programming Methodology Annabelle McIver,Carroll Morgan,2012-12-06 The second half of the twentieth century saw an astonishing increase in computing power today computers are unbelievably faster than they used to be they have more memory they can communicate routinely with remote machines all over the world and they can fit on a desktop But despite this remarkable progress the voracity of modem applications and user expectations still pushes technology right to the limit As hardware engineers build ever more powerful machines so too must software become more sophisticated to keep up Medium to large scale programming projects need teams of people to pull everything together in an acceptable timescale The question of how programmers understand their own tasks and how they fit together with those of their colleagues to achieve the overall goal is a major concern Without that understanding it would be practically impossible to realise the commercial potential of our present day computing hardware That programming has been able to keep pace with the formidable advances in hardware is due to the similarly formidable advances in the principles for design construction and organisation of programs The efficacy of these methods and principles speaks for itself computer technology is all pervasive but even more telling is that they are beginning to feed back and influence hardware design as well The study of such methods is called programming methodology whose topics range over system and domain modelling concurrency object orientation program specification and validation That is the theme of this collection

Processes, Terms and Cycles: Steps on the Road to Infinity Aart Middeldorp,Vincent van Oostrom,Femke van Raamsdonk,Roel de Vrijer,2005-12-11 This Festschrift is dedicated to Jan Willem Klop on the occasion of his 60th birthday The volume comprises a total of 23 scientific papers by close friends and colleagues written specifically for this book The papers are different in nature some report on new research others have the character of a survey and again others are mainly expository Every contribution has been thoroughly refereed at least twice In many cases the first round of referee reports led to significant revision of the original paper which was again reviewed The articles especially focus upon the lambda calculus term rewriting and process algebra the fields to which Jan Willem Klop has made fundamental contributions

Interactive Markov Chains Holger Hermanns, 2003-08-02 Markov Chains are widely used as stochastic models to study a broad spectrum of system performance and dependability characteristics This monograph is devoted to compositional specification and analysis of Markov chains Based on principles known from process

algebra the author systematically develops an algebra of interactive Markov chains By presenting a number of distinguishing results of both theoretical and practical nature the author substantiates the claim that interactive Markov chains are more than just another formalism Among other an algebraic theory of interactive Markov chains is developed devise algorithms to mechanize compositional aggregation are presented and state spaces of several million states resulting from the study of an ordinary telephone system are analyzed

Symbolic Model Checking Kenneth L. McMillan, 2012-12-06 Formal verification means having a mathematical model of a system a language for specifying desired properties of the system in a concise comprehensible and unambiguous way and a method of proof to verify that the specified properties are satisfied When the method of proof is carried out substantially by machine we speak of automatic verification Symbolic Model Checking deals with methods of automatic verification as applied to computer hardware The practical motivation for study in this area is the high and increasing cost of correcting design errors in VLSI technologies There is a growing demand for design methodologies that can yield correct designs on the first fabrication run Moreover design errors that are discovered before fabrication can also be quite costly in terms of engineering effort required to correct the error and the resulting impact on development schedules Aside from pure cost considerations there is also a need on the theoretical side to provide a sound mathematical basis for the design of computer systems especially in areas that have received little theoretical attention

Refinement John Derrick, Eerke Boiten, 2018-09-03 Refinement is one of the cornerstones of a formal approach to software engineering Refinement is all about turning an abstract description of a soft or hardware system into something closer to implementation It provides that essential bridge between higher level requirements and an implementation of those requirements This book provides a comprehensive introduction to refinement for the researcher or graduate student It introduces refinement in different semantic models and shows how refinement is defined and used within some of the major formal methods and languages in use today It 1 introduces the reader to different ways of looking at refinement relating refinement to observations 2 shows how these are realised in different semantic models 3 shows how different formal methods use different models of refinement and 4 how these models of refinement are related

Communicating Process Architectures 2004 Ian East, J. Martin, P.H. Welch, 2004 Communicating Process Architecture CPA describes an approach to system development that is process oriented It makes no great distinction between hardware and software It has a major root in the theory of Communicating Sequential Processes CSP However the underlying theory is not limited to CSP The importance of mobility of both channel and process within a network sees integration with ideas from the calculus Other formalisms are also exploited such as BSP and MPI The focus is on sound methods for the engineering of significant concurrent systems including those that are distributed across the Internet or within a single chip and or software scheduled on a single execution unit Traditionally at CPA the emphasis has been on theory and practice developing and applying tools based upon CSP and related theories to build high integrity systems of significant size In particular interest focuses on

achieving scalability and security against error The development of Java C and C libraries to facilitate secure concurrent programming using mainstream languages has allowed CPA to continue and proliferate This work continues in support of the engineering of distributed applications Recently there has been greater reference to theory and its more direct application to programming systems and languages In this volume the formal CSP is very well presented The papers provide a healthy mixture of the academic and commercial software and hardware application and infrastructure which reflects the nature of the discipline

Hybrid and Real-Time Systems Oded Maler, 1997-03-05 This book constitutes the refereed proceedings of the International Workshop on Hybrid and Real Time Systems HART 97 held in Grenoble France in March 1997 The volume presents 18 revised full papers and 9 short presentations carefully selected during a highly competitive evaluation process also included are full versions or abstracts of 7 invited papers or tutorials Hybrid Systems consist of digital devices interacting with analog environments thus the emerging area lies at the crossroads of computer science and control theory This book focusses on mathematically sound methods for the rigorous and systematic design and analysis of hybrid systems and real time systems

FME '93: Industrial-Strength Formal Methods Jim Woodcock, James C.P. Woodcock, Peter G. Larsen, 1993 The last few years have borne witness to a remarkable diversity of formal methods with applications to sequential and concurrent software to real time and reactive systems and to hardware design In that time many theoretical problems have been tackled and solved and many continue to be worked upon Yet it is by the suitability of their industrial application and the extent of their usage that formal methods will ultimately be judged This volume presents the proceedings of the first international symposium of Formal Methods Europe FME 93 The symposium focuses on the application of industrial strength formal methods Authors address the difficulties of scaling their techniques up to industrial sized problems and their suitability in the workplace and discuss techniques that are formal that is they have a mathematical basis and that are industrially applicable The volume has four parts Invited lectures containing a lecture by Cliff B Jones and a lecture by Antonio Cau and Willem Paul de Roever Industrial usage reports containing 6 reports Papers containing 32 selected and refereed papers Tool descriptions containing 11 descriptions
