Concurrent Design of Products, Manufacturing Processes and Systems Ben Wang, 1999-01-27 Methods presented involve the use of simulation and modeling tools and virtual workstations in conjunction with a design environment This allows a diverse group of researchers manufacturers and suppliers to work within a comprehensive network of shared knowledge The design environment consists of engineering workstations and servers and a suite of simulation quantitative computational analytical qualitative and experimental tools Such a design environment will allow the effective and efficient integration of complete product design manufacturing process design and customer satisfaction predictions This volume enables the reader to create an integrated concurrent engineering design and analysis infrastructure through the use of virtual workstations and servers provide remote instant sharing of engineering data and resources for the development of a product system mechanism part business and or process and develop applications fully compatible with international CAD CAM CAE standards for product representation and modeling , **Effective Transition from Design to Production** David F. Ciambrone, 2007-10-04 Taking a new product from the design stage to large scale production in a profitable efficient manner can challenge the processes of even the most advanced companies Lapses in these processes drive up the cost of new products and hinder their launch into the marketplace Effective Transition from Design to Production provides an expeditious **Proceedings Of 17th All India Manufacturing Technology , Integrated Product, Process and Enterprise Design** Ben Wang, 2012-12-06 The need exists in the private sector and government manufacturing sites to reduce product development time production lead times inventory and non value added activities At the same time there is increased pressure to improve manufacturing process yields production efficiency and resource utilization Much of the technology required to meet these needs already exists but an integrated structure that can demonstrate the potential for the technology in a concurrent engineering context does not This book provides a road map for building the integrated technology environment to evaluate existing products manufacturing processes and system design tools This book details innovative approaches that will significantly improve design manufacturing technology development and deployment capabilities for civilian and defense applications These approaches are integrated product process and system design IPPSD initiatives which will greatly enhance the manufacturing competitiveness of the economy These approaches involve the use of simulation modeling tools and computerized virtual workstations in conjunction with a design environment which allows a diverse group of researchers manufacturers and suppliers to work within a comprehensive network of shared knowledge The IPPSD infrastructure consists of virtual workstations servers and a suite of simulation quantitative computational analytical experimental and qualitative tools Such an IPPSD infrastructure will permit effective and efficient predictions of complete product design manufacturing process design and customer satisfaction **Information Control Problems in Manufacturing Technology 1992** M.B. Allen, B. P. Gautham, Amarendra K. Singh, Farrokh Mistree, 2020-06-13 This book explores systems based co design introducing a Decision Based Co Design DBCD approach for the co design of materials products and processes In recent years there have been significant advances in modeling and simulation of material behavior from the smallest atomic scale to the macro scale However the uncertainties associated with these approaches and models across different scales need to be addressed to enable decision making resulting in designs that are robust that is relatively insensitive to uncertainties An approach that facilitates co design is needed across material product design and manufacturing processes This book describes a cloud based platform to support decisions in the design of engineered systems CB PDSIDES which feature an architecture that promotes co design through the servitization of decision making knowledge capture and use templates that allow previous solutions to be reused Placing the platform in the cloud aids mass collaboration and open innovation A valuable reference resource reference on all areas related to the design of materials products and processes the book appeals to material scientists design engineers and all those involved in the emerging interdisciplinary field of integrated computational materials engineering ICME
