Technical Manual: Plastic Pipe Used in Embankment Dams , **Design of Miscellaneous Structures** United States. Army. Office of the Chief of Engineers,1948 **Surveillance, Maintenance and Diagnosis of Flood Protection Dikes** Patrice Mériaux,Paul Royet,2007-10-08 This technical guide is intended for personnel within services or structures involved in managing dikes that protect against floods in the case of a rise in river levels It is intended for an audience of technicians and it aims to popularise the functioning principles concerning a system of dikes the risks run monitoring methods and maintenance methods Its aim is to justify and describe all the necessary measures to ensure the long life and security of the constructions Local and Personal Laws Great Britain,1891 **The Supporting Strength of Rigid Pipe Culverts**

Merlin Grant Spangler,1933 The trend of practice in the design of rigid circular pipe culverts has been toward more definite field load calculation and the utilization of laboratory tests for the determination of the field supporting strength of such structures These tests however do not give directly a measure of the structural strength of the pipes when installed under embankments since the loading conditions in the tests and in the field installations are radically different It is necessary therefore to know the correlation between the laboratory test strength of pipe and the field strength of similar pipe in order to apply the test strengths to problems in design The field supporting strength of rigid pipe is dependent upon the distribution of the applied vertical loads produced by the covering earth and by traffic loads at the surface of the embankment upon the construction conditions affecting the distribution of the vertical reaction and upon the distribution and magnitude of the active lateral earth pressure on the pipe The ratio of the field supporting strength to the three edge bearing laboratory strength of similar pipe as defined as the load factor The purpose of this research has been to determine the load factor for rigid pipe culverts when installed under various field conditions affecting the vertical reaction and the active lateral

earth pressure and subjected to vertical loads due to the covering earth with or without loads due to surface traffic The plan pursued to accomplish this purpose was to conduct a number of experiments in which several pipe sections selected at random from a given shipment were tested in the laboratory with the three edge bearing test A like number of similar sections were then loaded in the field by an actual embankment and the field strength determined The ratio of these two strengths in the load factor for that set of pipe for the conditions under which they were installed in the field tests With the data thus secured as a basis a rational theory for determining the load factor under all conditions of loading was developed Working values of the load factor determined in accordance with this theory are proposed for a range of field conditions covering all cases likely to be encountered in practice Great Lakes Basin Library: Interim Bibliography United States. Geotechnical Engineering of Dams Robin Fell, Patrick MacGregor, David Stapledon, Graeme Bell, Mark Foster, 2014-11-21 This book provides a comprehensive text on the geotechnical and geological aspects of the investigations for and the design and construction of new dams and the review and assessment of existing dams The book provides dam engineers and geologists with a practical approach and gives university students an insight into the subject of dam engineering All phases of investigation design and construction are covered through to the preliminary and detailed design phases and ultimately the construction phase This revised and expanded 2nd edition includes a lengthy new chapter on the assessment of the likelihood of failure of dams by internal erosion and piping Thesaurus of Water Resources Terms United States.
