time outside of their original descriptions The spatial arrangements of malacofaunas shown in this book can be considered proxies for worldwide oceanic conditions and used as tools for determining patterns of global climate change The book s documentation of evolutionary hot spots and geographically restricted endemic faunas can also be used as a base line for future studies on patterns of environmental deterioration and extinction in the marine biosphere Documenting the evolution of the amazingly rich worldwide gastropod fauna this book will appeal to physical and chemical oceanographers systematic and evolutionary biologists historical geologists paleontologists climatologists geomorphologists and physical geographers The authors incorporate aspects of all of these disciplines into a new classification system for the nomenclature of biogeographical spatial units found in tropical subtropical and warm temperate seas **South Pacific Bibliography** ,1986
