Conference On Photoelectronic Imaging:

Photoelectronic Imaging Devices Lucien Biberman, 2013-03-13 The past decade has seen a major resurgence in optical research and the teaching of optics in the major universities both in this country and abroad Electrooptical devices have become a challenging subject of study that has penetrated both the electrical engineering and the physics departments of most major schools There seems to be something about the laser that has appealed to both the practical electrical engineer with a hankering for fundamental research and to the fundamental physicist with a hankering to be practical Somehow or other this same form of enthusiasm has not previously existed in the study of photoelectronic devices that form images This field of endeavor is becoming more and more sophisticated as newer forms of solid state devices enter the field not only in the data processing end but in the conversion of radiant energy into electrical charge patterns that are stored manipulated and read out in a way that a decade ago would have been considered beyond some fundamental limit or other

Guzzardi, 2012-12-06 The NATO Advanced Study Institute ASI on Physics and Engineering of Medical Imaging has addressed a subject which in the wide area of biomedical technology is one of those which are showing greater impact in the practice of medicine for the ability to picture both Anatomy and Physiology The information and accuracy obtained by whatever imaging methodology is a complex result of a multidisciplinary effort of several sciences such as Physics Engineering Electronics Chemistry Medicine etc Development has occurred through work performed in different environments such as basic and applied research laboratories industries and clinical centers with the aim of achieving an efficient transfer of know how and technology for the improvement of both investigation possibilities and health care On one

hand such an effort requires an ever increasing commitment of human and financial resources at research and industrial level and on the other it meets serious difficulties in recruiting the necessary human expertise oriented to this technology which breaks with the traditional academic borders of the single disciplines Furthermore the scientific community is continually dealing with the problem of increasing the performance and at the same time complexity and costs of instruments applying more and more sophisticated technology in an effort to meet the demand for more complete and accurate clinical information The scientific program of this ASI and the qualification of the authors reveals the intrinsic complexity of the development process of the Imaging methodologies

Two dimensional materials created ab initio by the process of condensation of atoms molecules or ions called thin films have unique properties significantly different from the corresponding bulk materials as a result of their physical dimensions geometry nonequilibrium microstructure and metallurgy Further these characteristic features of thin films can be drastically modified and tailored to obtain the desired and required physical characteristics These features form the basis of development of a host of extraordinary active and passive thin film device applications in the last two decades On the one extreme these applications are in the submicron dimensions in such areas as very large scale integration VLSI Josephson junction quantum interference devices magnetic bubbles and integrated optics On the other extreme large area thin films are being used as selective coatings for solar thermal conversion solar cells for photovoltaic conversion and protection and passivating layers Indeed one would be hard pressed to find many sophisticated modern optical and electronic devices which do not use thin films in one way or the other With the impetus provided by industrial applications the science and technology of thin films have undergone revolutionary development and even today continue to be recognized globally as frontier areas of R&D work Major technical developments in any field of science and technology are invariably accompanied by an explosion of published literature in the form of scientific publications reviews and books
