Cytokines and Cancer Leonidas C. Plataniotis, 2006-05-06. Dramatic advances have occurred over the last few years in the research field of cancer biology. There has been a constant accumulation of important new information resulting in a gradual transformation of the perceptions that exist among scientists regarding mechanisms by which the malignant phenotype develops. The recent developments in cancer research have also had a substantial impact in efforts towards the development of new cancer therapies. One of the most explosive and rapidly advancing research areas has been the area of cytokines and cancer. Many perceptions have changed from the original discovery decades ago of the interferon to the current state of the art cytokine research. It is now well recognized

that many cytokines play important roles in normal cellular functions while some of them have prominent roles in the pathophysiology of cancer It is also now firmly established that several cytokines promote the growth of cancer cells while others act as suppressors of malignant cell proliferation The importance of the cytokine signaling field in cancer is reflected by the development of multiple treatments that have been introduced in clinical oncology over the last few years Understanding the physiological functions of cytokines as well as their precise roles in the pathogenesis of certain malignancies is extremely important in the current clinical era *Diagnostic Criteria Handbook in Histopathology* Paul J.
