Alters 1st Edition:

Science and Pseudoscience in Clinical Psychology, First Edition Scott O. Lilienfeld, Steven Jay Lynn, Jeffrey M. Lohr, 2012-12-18 This is the first major text designed to help professionals and students evaluate the merits of popular yet controversial practices in clinical psychology differentiating those that can stand up to the rigors of science from those that cannot. Leading researchers review widely used therapies for alcoholism, infantile autism, ADHD, and posttraumatic stress disorder; herbal remedies for depression and anxiety; suggestive techniques for memory recovery; and self-help models. Other topics covered include issues surrounding psychological expert testimony, the uses of projective assessment techniques, and unanswered questions about dissociative identity disorder. Providing knowledge to guide truly accountable mental health practice, the volume also imparts critical skills for designing and evaluating psychological research programs. It is ideal for use in advanced undergraduate and graduate level courses in clinical psychology, psychotherapy, and evidence-based practice.

Handbook of Emotion Regulation, First Edition James J. Gross, 2011-12-07 This authoritative volume provides a comprehensive road map of the important and rapidly growing field of emotion regulation. Each of the 30 chapters in this handbook reviews the current state of knowledge on the topic at hand, describes salient research methods, and identifies promising directions for future investigation. The contributors, who are the foremost experts in the field, address vital questions about the neurobiological and cognitive bases of emotion regulation, how we develop and use regulatory strategies across the lifespan, individual differences in emotion regulation, social psychological approaches, and implications for psychopathology, clinical interventions, and health.

Employability Revisited Anne Rosken, 2022-08-18 One of the most pressing issues in current and future human resource management is the inclusion of strengths and life stages within human resource structures. This book examines, in a multi-perspective, innovative and participatory way, the conditioning factors for persistent stereotyping processes in the context of age and work. Levers for change, as well as the circular model for optimizing or implementing life phase-oriented human resource management, are presented. The book is valuable for lecturers and students with a focus on corporate and human resources management. It also offers practical assistance for corporate leaders and human resources managers for the implementation of a strength-oriented human resources management.
