Alzheimer's, Life's Darkest Disease Bill Brokaw, 2020-04-14 This is a true story written by Bill Brokaw of his seventy nine year old wife Pat as she suffers from brain damage Brain damage that causes her to lose her memory and her ability to knit sew crochet write and all hand coordinated activities in which she excelled before dementia The story takes place over a period of four years and exists because Bill took the time to make a journal of her walk into the clutches of this terrible disease Early on doctors called it dementia but over a year ago the diagnostic call was

Alzheimer's When Bill first realized that Pat was losing her memory he contacted a friend whose husband had lost his life to Alzheimer's. The friend advised Bill to not only see a doctor who specializes in brain diseases but to also contact the Alzheimer's Association for help. It was only through the help of the doctor and Alzheimer's that Bill was able to handle the very difficult job of a caregiver. Caregiving over the four years for eighty-year-old Bill went from a small amount of care to total care. Total care was just too difficult and caused Bill many sleepless nights. Finally with the financial help from both Medicaid and the Veterans Administration Pat and Bill got the help they need to reside in the Alaska Veterans and Pioneers Home located in Palmer, Alaska. Also the Alzheimer's Association should be credited with providing the classes that enabled Bill to become a patient and understanding caregiver.

Treating Dementia Jesse F. Ballenger, 2009-10-19. Treatments for age-related dementia and the growing reliance on pharmaceuticals to alleviate its worst symptoms raise a number of questions about attitudes toward aging and cognition, the relationship between growing older and getting sick, and the conflicting interests of patients, caregivers, physicians, scientists, and business. This volume aims to foster a constructive debate about the future of dementia treatment by providing multiple perspectives on these tangled issues. The first section examines how the concepts of dementia have expanded to encompass a broad range of symptoms and the implications of this evolution on the development of pharmaceutical treatments. The second section explores the use and effectiveness of drug treatments for dementia through the perspectives of a clinician, a researcher, and a layperson. In the third section, the contributors probe how culture, language, and values affect the overlapping worlds of pharmacology, drug marketing, and dementia treatment. A final section elucidates the thorny ethical and policy concerns surrounding the often conflicting hopes for dementia medications. Featuring contributions from noted clinicians, researchers, and scholars from a broad range of disciplines, this multidisciplinary dialogue addresses central questions about the history and future of drug treatment for dementia and makes clear why there are no simple answers. Professionals and students involved in gerontology, psychiatry, and bioethics will find the discussion both enlightening and practical.
