Alluvial Geoarchaeology Floodplain Archaeology And Environmental Change:

Alluvial Geoarchaeology A. G. Brown, 2009-12-03 This comprehensive technical manual is designed to give archaeologists the necessary background knowledge in environmental science required to excavate and analyze archaeological sites by rivers and on floodplains Bringing together information on the evolution and exploitation of floodplain and river landscapes this text draws on examples from Britain Europe North America and Australasia An important theme is the interaction between climatic and cultural forces and the transformation of riverine environments

Geoarchaeology, Climate Change, and Sustainability Antony G. Brown, Laura S. Basell, Karl W. Butzer, 2011-01-01 This volume provides a broad survey of recent advances in geoarchaeology with particular attention to environmental change The fourteen chapters include methodologically innovative research case studies valuable for teaching and the use of geological techniques to answer archaeological questions from lower Paleolithic hunting to the location of Homer's Ithaca Geoarchaeology Climate Change and Sustainability also includes a major position paper and unusually two papers on the management of the geoarchaeological resource Both the geographical and chronological coverage are broad ranging from the Lower Paleolithic lower Pleistocene to the Iron Age late Holocene and from rural Iran to urban Manhattan The research presented here clearly demonstrates the value and practical application of geoarchaeological techniques from sediment based dating to geographic information systems

Alluvial Archaeology in Europe Andrew J. Howard, M.G. Macklin, D.G. Passmore, 2003-01-01 This book documents and assesses over ten years of research in the field bringing together expertise and knowledge from the disciplines of archaeology and geomorphology and highlighting important recent advances discoveries and new directions Reflecting the wide scope of current research in this area the book contains over twenty papers focusing on various aspects of alluvial archaeology from the methodology of dating prospecting excavating etc to previously under analysed geographical areas such as intertidal wetlands

Geomorphological Processes and Landscape Change David L. Higgitt, E. Mark Lee, 2011-07-15 The expert contributors to this cutting edge volume provide an overview of geomorphological process activity and landscape change in Britain over the past 1000 years The range of the book is unusually broad encompassing hillslope valley floor and floodplain fluvial estuarine and coastal processes Provides an overview of geomorphological process activity and landscape change in Britain over the past 1000 years The range of the book is unusually broad encompassing hillslope valley floor and floodplain fluvial estuarine and coastal processes Considers

the relevance of technological and conceptual approaches to understanding landscape dynamics Examines key process environments highlighting significant trends and the influence of human activity and incorporating examples and modelling Encourages geographers to look forward to the challenges that geomorphology faces in the new millennium Find out more information about the RGS IBG journals by following the links below AREA <http://www.blackwellpublishing.com/journal.asp?ref=0004-0894> The Geographical Journal <http://www.blackwellpublishing.com/journal.asp?ref=0016-7398> Transactions of the Institute of British Geographers <http://www.blackwellpublishing.com/journal.asp?ref=0020-2754> *Environmental Archaeology* Elizabeth Reitz, Myra Shackley, 2012-06-05 One of the most significant developments in archaeology in recent years is the emergence of its environmental branch the study of humans interactions with their natural surroundings over long periods and of organic remains instead of the artifacts and household items generally associated with sites With the current attention paid to human responsibility for environmental change this innovative field is recognized by scientists conservation and heritage managers and policymakers worldwide In this context comes *Environmental Archaeology* by Elizabeth Reitz and Myra Shackley updating the seminal 1981 text *Environmental Archaeology* by Myra Shackley Rigorously detailed yet concise and accessible this volume surveys the complex and technical field of environmental archaeology for researchers interested in the causes consequences and potential future impact of environmental change and archaeology Its coverage acknowledges the multiple disciplines involved in the field expanding the possibilities for using environmental data from archaeological sites in enriching related disciplines and improving communication among them Introductory chapters explain the processes involved in the formation of sites introduce research designs and field methods and walk the reader through biological classifications before focusing on the various levels of biotic and abiotic materials found at sites including Sediments and soils Viruses bacteria archaea protists and fungi Bryophytes and vascular plants Wood charcoal stems leaves and roots Spores pollen and other microbotanical remains Arthropods molluscs echinoderms and vertebrates Stable isotopes elements and biomolecules The updated *Environmental Archaeology* is a major addition to the resource library of archaeologists environmentalists historians researchers policymakers anyone involved in studying managing or preserving historical sites The updated *Environmental Archaeology* is a major addition to the resource library of archaeologists environmentalists historians researchers policymakers anyone involved in studying managing or preserving historical sites

Earth Sciences and Archaeology Paul Goldberg, Vance T. Holliday, C. Reid Ferring, 2013-11-11 *Earth Sciences and Archaeology* brings together contributions from an experienced group of archaeologists and geologists whose common objective is to present thorough and current reviews of the diverse ways in which methods from the earth sciences can contribute to archaeological research Many areas of research are addressed here including artifact analysis and sourcing landscape reconstruction and site formation analysis soil micromorphology and geophysical exploration of buried sites Archaeology has benefited from geological methods in many ways in recent decades However in the past ten to twenty years

this informal collaboration between geologists and archaeologists has grown into a formal integration of earth science and archaeology on a significant scale This book allows the contributors to assess where we are in terms of interdisciplinary research which approaches work best in specific situations and where this collaborative approach should progress to in the future Environmental Archaeology and the Social Order John G. Evans,2004-02-24 Presenting a wide variety of case

studies ranging from the early Palaeolithic to Post modernity and from Europe to the Andes West and East Africa and the USA Environmental Archaeology and the Social Order deals with both the theory and method of environmental archaeology Including significant sections on Neanderthals Palaeolithic mobiliary art and the origins of farming as well as transhumance climate as social construct field survey and the place of documents in environmental research Professor Evans interprets his findings in social constructionist terms creating an important argument against the use of traditional materialist and processualist paradigms This original and controversial volume sets a new agenda for the study and understanding of environmental archaeology and will prove an informative and useful purchase **Rivers and the Power of Ancient Rome**

Brian Campbell,2012-08-15 Figuring in myth religion law the military commerce and transportation rivers were at the heart of Rome s increasing exploitation of the environment of the Mediterranean world In Rivers and the Power of Ancient Rome Brian Campbell explores the role and influence of rivers and their surrounding landscape on the society and culture of the Roman Empire Examining artistic representations of rivers related architecture and the work of ancient geographers and topographers as well as writers who describe rivers Campbell reveals how Romans defined the geographical areas they conquered and how geography and natural surroundings related to their society and activities In addition he illuminates the prominence and value of rivers in the control and expansion of the Roman Empire through the legal regulation of riverine activities the exploitation of rivers in military tactics and the use of rivers as routes of communication and movement Campbell shows how a technological understanding of and even mastery over the forces of the river helped Rome rise to its central place in the ancient world *Flood Reconstruction* Jürgen Herget,2024-10-22 Floods are among the most common

and consequential natural disasters on Earth occurring in all natural areas at all times Yet they often surprise us with their unexpected magnitude and the damage they cause Terms like century and millennium floods quickly become widespread but what do we really know about the floods of the past How can we truly classify events like the Mississippi flood of 1993 the Elbe flood of 2002 or the Pakistan flood of 2010 Have such floods occurred before or are they unprecedented perhaps even consequences of ongoing climate change To answer these questions we must look into the past However river level records are often limited in duration rarely extending back more than a hundred years and many regions lack any measured values at all Nonetheless floods have left their marks These marks may exist in the form of historical records and descriptions which vary in extent across different cultural contexts In addition to historical records natural indicators like deposited sediments or erosion traces provide valuable information about past flood levels This is particularly important for prehistoric periods

and for regions without dense settlements and related gauges These investigations lead to further questions about maximum flood levels and the earliest recorded observations This book addresses these questions by exploring the reconstruction of floods from both historical and prehistoric times It explains and discusses methods and results for beginners with diverse backgrounds in disciplines such as earth sciences hydrology history and engineering Extensive and carefully selected reference lists offer access to additional information

Encyclopedia of Quaternary Science

Cary Mock, 2013-03-25 The second revised edition of the Encyclopedia of Quaternary Science Four Volume Set provides both students and professionals with an up to date reference work on this important and highly varied area of research There are lots of new articles and many of the articles that appeared in the first edition have been updated to reflect advances in knowledge since 2006 when the original articles were written The second edition will contain about 375 articles written by leading experts around the world This major reference work is richly illustrated with more than 3 000 illustrations most of them in colour Research in the Quaternary sciences has advanced greatly in the last 10 years especially since topics like global climate change geologic hazards and soil erosion were put high on the political agenda This second edition builds upon its award winning predecessor to provide the reader assured quality along with essential updated coverage Contains 357 broad ranging articles 4310 pages written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field Facilitates teaching and learning The first edition was regarded by many as the most significant single overview of Quaternary science ever yet Editor in Chief Scott Elias has managed to surpass that in this second edition by securing even more expert reviews whilst retaining his

renowned editorial consistency that enables readers to navigate seamlessly from one unfamiliar topic to the next **The English Coast** Peter Murphy, 2011-10-20 This book examines the interaction between people and the coast of England. It spans from 700 000 years ago and the earliest evidence of humans in this remote corner of north west Europe to the end of the 20th century. The coastline has witnessed interesting and significant events throughout history and looks set to do so in the future. Often it is the first place where changes can be seen for example the effects of climate change. It is also where evidence for human adaptation to environmental changes can most readily be seen. The coast has of course also been a cultural contact zone for millennia in terms of trade, industry, immigration and conflict. We are certainly at a time of great environmental and economic transition so it is apt to now take a long view and place current events in context. Some changes happening today may seem unprecedented but in fact are not while others are entirely new. One thing we can be sure of is that the coast and sea will become increasingly important to us both as an economic benefit and as a threat. *Floodplains*

A Companion to the Etruscans Sinclair Bell, Alexandra A. Carpino, 2016-02-23 This new collection presents a rich selection of innovative scholarship on the Etruscans, a vibrant independent people whose distinct civilization flourished in central Italy for most of the first millennium BCE and whose artistic, social and cultural traditions helped shape the ancient Mediterranean, European and Classical worlds. Includes contributions from an international cast of both established and emerging scholars. Offers fresh perspectives on Etruscan art and culture including analysis of the most up to date research and archaeological discoveries. Reassesses and evaluates traditional topics like architecture, wall painting, ceramics and sculpture as well as new ones such as textile archaeology while also addressing themes that have yet to be thoroughly investigated in the scholarship such as the *obesus etruscus*, the function and use of jewelry at different life stages, Greek and Roman *topoi* about the Etruscans, the Etruscans' reception of ponderation and more. Counters the claim that the Etruscans were culturally inferior to the Greeks and Romans by emphasizing fields where the Etruscans were either technological or artistic pioneers and by reframing similarities in style and iconography as examples of Etruscan agency and reception rather than as a deficit of local creativity. *The Creation of Monuments* Alistair Oswald, Carolyn Dyer, Martyn Barber, 2014-07-15 Neolithic Causewayed enclosures are amongst the oldest, rarest and most enigmatic of the ancient monuments found in Europe. First recognised as a distinct type in the 1920s, sixty nine certain or probable examples have now been identified in the British Isles. As a class they are of outstanding importance for while their precise functions remain unclear they represent the first non funerary monuments and the earliest instance of the enclosure of open space. This book presents an overview of the findings of a systematic national programme of research carried out by the RCHME now merged with English Heritage. Every certain, probable and suggested causewayed enclosure in England has been investigated through integrated aerial and field survey. Specialist reconnaissance flying has been undertaken along with the thorough analysis of aerial photographs.

taken from the 1920s onwards This has greatly increased the number of sites known turning the spotlight onto many that have received little or no archaeological attention in the past The aerial surveys now available offer a new basis for improved understanding Analytical field investigations of the few causewayed enclosures that are well preserved as earthworks have also squeezed fresh information out of even those long familiar to archaeologists Far from merely dotting the i s and crossing the t s of past fieldworkers these detailed surveys have led to the rejection of some long held theories and the proposal of new interpretations This book significantly advances the understanding of causewayed enclosures both as individual monuments and as a class It is a major contribution to the understanding of the British Neolithic and to landscape archaeology more generally Late Quaternary Environmental Change Martin Bell,M.J.C. Walker,2014-07-10 Late Quaternary Environmental Change addresses the interaction between human agency and other environmental factors in the landscapes particularly of the temperate zone Taking an ecological approach the authors cover the last 20 000 years during which the climate has shifted from arctic severity to the conditions of the present interglacial environment Butrint 7 David Hernandez,Richard Hodges,2020-12-14 This volume brings together unpublished Italian and Albanian archaeological reports and new archaeological studies from recent fieldwork that throw new light on the archaeology and history of the Pavllas River Valley the Mediterranean alluvial plain in the territory of Butrint ancient Buthrotum in southwestern Albania It gives prominence for the first time to two important sites Kalivo and uka e Aitoit which are here reinterpreted and shown to have played major roles in the early history of Butrint as it evolved in the later first millennium BC to emerge as the key city of Chaonia in Epirus Butrint 7 also presents the full excavation report of the Late Bronze Age and Hellenistic fortified site of Mursi in addition to other Butrint Foundation surveys and excavations in the hinterland of Butrint including the Roman villa maritima at Diaporit the villa suburbana on the Vrina Plain and Roman sites on Alinura Bay and at the Customs House as well as new surveys of the early modern Triangular Fortress and a survey to locate the lost Venetian village of Zar pulo The volume also features a new study of the Hellenistic bronze statuette of Pan found on Mount Mile and of his sanctuary at Butrint The volume concludes with a comprehensive reassessment of the Pavllas River Valley in relation to Butrint from the Palaeolithic to the modern eras examining how dominion territory environment and the corrupting sea reshaped Butrint and its fluvial corridor diachronically and particularly brought profound territorial economic and social alterations under the Roman Empire Ol' Man River Morgan De Dapper,2009 This volume contains the selected proceedings of a multidisciplinary conference Ghent 2006 which stimulated looking at landscape evolution from the times of early human involvement in nature to much more recent historical developments **James River Chiefdoms** Martin D. Gallivan,2003-01-01 James River Chiefdoms explores puzzling discrepancies between the ethnohistoric and archaeological records of the Powhatan and Monacan societies Jamestown colonists met in 1607 The colonists described the coastal Powhatans and the Monacans of the James River interior in terms that evoke the anthropological notion of a chiefdom but the

Chesapeake region's archaeological record lacks elements typically associated with complex polities. In an effort to account for these apparent incongruities, Martin D. Gallivan synthesizes ethnohistoric accounts with the archaeology of thirty-five Native settlements dating from A.D. 1610 to identify and illuminate social changes largely undetected by previous research. A comparative quantitative analysis of residential archaeology in the James River Valley highlights a rearrangement of daily practices within Native villages between 1200 and 1500. James River villagers reorganized their domestic production, settlements, and regional interactions to create new funds of power within social settings perched between communally oriented cultural practices and exclusionary political strategies. During the early seventeenth-century colonial encounter, Native leaders were thus positioned to employ strategies that for a time eclipsed communal decision-making structures in the Chesapeake. *James River Chiefdoms* presents a novel perspective on an important chapter in the history of Native peoples in eastern North America and on early colonial America. It offers an innovative interpretive approach to Native American culture history and the emergence of hierarchical political organizations in the Americas.
