Block Method For Solving The Laplace Equation And For Constructing Conformal Mappings:

Block Method for Solving the Laplace Equation and for Constructing Conformal Mappings Evgenii A. Volkov, 2017-07-28

This book presents a new efficient numerical analytical method for solving the Laplace equation on an arbitrary polygon. This method, called the approximate block method, overcomes indicated difficulties and has qualitatively more rapid convergence than well-known difference and variational difference methods. The block method also solves the complicated problem of approximate conformal mapping of multiply connected polygons onto canonical domains with no preliminary information required. The high precision results of calculations carried out on the computer are presented in an abundance of tables substantiating the exponential convergence of the block method and its strong stability concerning the rounding off of errors.

Handbook of Complex Analysis Reiner Kuhnau, 2004-12-09 Geometric Function Theory is that part of Complex Analysis which covers the theory of conformal and quasiconformal mappings. Beginning with the classical Riemann mapping theorem, there is a lot of existence theorems for canonical conformal mappings. On the other side, there is an extensive theory of qualitative properties of conformal and quasiconformal mappings concerning mainly a priori estimates, so-called distortion theorems, including the Bieberbach conjecture with the proof of the Branges. Here a starting point was the classical Schwarz lemma, and then Koebe's distortion theorem. There are several connections to mathematical physics because of the relations to potential theory in the plane. The Handbook of Geometric Function Theory contains also an article about constructive methods and further a Bibliography including applications, e.g., to electrostatic problems, heat conduction, potential flows in the plane. A collection of independent survey articles in the field of Geometric Function Theory. Existence theorems and qualitative properties of conformal and quasiconformal mappings. A bibliography including many hints to applications in electrostatics, heat conduction, potential flows in the plane.

Mathematical Methods in Engineering K. Tas, J.A. Tenreiro Machado, D. Baleanu, 2007-11-25 This book contains some of the contributions that have been carefully selected and peer reviewed, which were presented at the International Symposium MME06 Mathematical Methods in Engineering held in Cankaya University, Ankara, April 2006. The Symposium provided a setting for discussing recent developments in Fractional Mathematics, Neutrices, and Generalized Functions, Boundary Value Problems, Applications of Wavelets, Dynamical Systems, and Control Theory.

Trefftz and Collocation Methods Z.-C. Li, T.-T. Lu, H.-Y. Hu, A. H.-D. Cheng, 2008-02-22 This title was reviewed in the January 2009 issue of Mathematical Reviews. Theory and Applications of Differentiable Functions of Several Variables, 1994 This collection is the fourteenth in an ongoing series on differentiable functions of several variables, presenting recent contributions to a line of research begun by Sobolev in 1950. The papers study various spaces of differentiable functions of several real variables in Euclidean space, their imbeddings, equivalent normings, weighted estimates of derivatives and traces on sets. Several questions of approximation in function spaces on the line, on a hyperboloid, and on Lobachevsky space are studied. Investigations of bilinear approximations are applied to estimates of the singular numbers of integral operators and

widths The authors also examine the asymptotics of the spectrum of elliptic systems as well as the Dirichlet variational problem for a degenerate elliptic operator Finally a block method of solving Laplace's equation for nonanalytic boundary conditions is developed *Theory and Applications of Differentiable Functions of Several Variables* S.
