*Immunobiology of Trophoblast* Robert Geoffrey Edwards,C. W. S. Howe,M. H. Johnson,1975-08-21      *Genetic Mosaics and Cell Differentiation* W. J. Gehring,2013-06-29 The relationship of cell lineage and differentiation is one of the most intriguing problems in developmental biology In most higher organisms the analysis of the cell lineage has to rely on indirect methods Only in the most suitable systems like the nematodes can the pattern of cell division be determined by direct observation under the microscope In cases where this is not possible the fate of the cells has to be examined by using cell markers Most suitable for this purpose are genetic markers provided that they do not interfere with the developmental pathway to be studied However suitable genetic markers and techniques for generating genetic mosaics are available in a few organisms only Therefore this volume is largely concerned with *Drosophila* and the mouse which have been studied most extensively In 1929 STURTEVANT introduced the analysis of gynandromorphs into developmental genetics However this important contribution remained largely unnoticed until the late sixties when the potential of this technique for determining embryonic fate maps and the number of primordial cells was exploited and the methodology extended to the mapping of mutational foci Mitotic recombination was demonstrated by STER      **Victor McKusick and the History of Medical**

**Genetics** Krishna R. Dronamraju,Clair A. Francomano,2012-06-08 This book is being planned as a tribute to Dr Victor A McKusick 1921 2008 who is well known as the father of medical genetics He was long associated with the Johns Hopkins University School of Medicine first as a student in the 1940s and later as a faculty member becoming the Chairman of the Department of Medicine at Johns Hopkins He was a co founder of GENOMICS and founder and lifelong editor of *Mendelian Inheritance in Man* a massive compendium of human syndromes and genetic variants Dr McKusick made distinguished contributions to all branches of medical genetics He was a member of the U S National Academy of Sciences and many other academies in the world He was awarded the National Medal of Science in 2002 He received many other honors including

several honorary doctorates The proposed book will reflect all the fields touched upon by Dr McKusick s contributions It will be a valuable source of the latest progress in medical genetics The contributors are internationally distinguished in their chosen specialties Besides professional distinction they are being selected because of their past association with Dr McKusick as former students or colleagues who extended his research in some fashion The proposed book will reflect all the fields touched upon by Dr McKusick s contributions It will be a valuable source of the latest progress in medical genetics The contributors are internationally distinguished in their chosen specialties Besides professional distinction they are being selected because of their past association with Dr McKusick as former students or colleagues who extended his research in some fashion

Methods in Mammalian Reproduction Joseph C. Jr. Daniel, 2012-12-02 Methods in Mammalian Reproduction presents some of the techniques for manipulating analyzing observing testing and generally experimenting with mammalian mothers and their gametes and embryos Mammalian reproduction involves an intimate relationship between mother and embryo The first 18 chapters are arranged in an order that follows a developmental sequence from oocyte to fetal organs and the remaining seven chapters deal with the maternal side of the relationship With strong focus on laboratory rodents and lagomorphs the book starts with an introduction to in vitro oocyte maturation and experimental production of mammalian parthenogenetic It goes on to describe the microtechniques in pre implantation of embryos production of chimeras techniques for early embryonic tissue separation mammalian embryo preservation by freezing and in vitro development of whole mouse embryos beyond the implantation stage Chapters 11 15 discuss the in vitro implantation of mouse blastocysts advances in rabbit embryo and in large mammal embryo cultures embryo transfer in large domestic mammals and manipulation of marsupial embryos and pouch young The following chapters cover reproduction experiments using marsupials domestic farm species and primates including humans Finally the concluding chapters tackle the use of amniocentesis in prenatal diagnosis collection and analysis of female genital tract secretions analysis of antifertility action of intrauterine devices and surgical induction of endometriosis This book will be helpful to students teachers researchers and clinical researchers who demand for more and better procedures for analysis of mammalian reproduction

**Embryogenesis in Mammals** Katherine Elliott, Maeve O'Connor, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world

The Early Development of Mammals British Society for Developmental Biology, 1975-08-21 Intersexuality in the Animal Kingdom R. Reinboth, 2012-12-06 When Richard Goldschmidt coined the term intersexuality in 1915 he intended it to apply to normally dioecious species which exhibit some kind of mixture between male and female characters However as knowledge of the bewildering variability present in the sexual organization of members of the animal kingdom has increased the original

meaning of the word has changed Today many authors define inter sexuality as the presence of both male and female characteristics or of intermediate sexual characteristics in a single individual 2 This more extensive and widely accepted concept justifies the title of our book Among all the anatomical and physiological features of living organisms the reproductive system has a unique importance for the perpetuation of the species Conversely reproductive processes are of little or no account for the viability of the individual Therefore within the framework of general biology reproduction has all too often been looked at solely from the point of view of genetics Lively discussions about genotypic versus phenotypic sex determination long dominated the scientific literature on sexuality in animals this one sided emphasis has tended to obscure many important facets of an organism s ability to reproduce Recent developments in current biological research have brought the classic problem of sex differentiation into focus again and the rapid progress being made in comparative endocrinology has added a new dimension to the study of reproductive biology
