The Legal

Regulation of Academic Freedom Lucia Pallier, 2025-11-12 This book compares and examines the ways in which law addresses and resolves conflicts between academic freedom and responsibility Academic freedom is an important value in the modern scientific and technologically driven world Societies depend heavily on the commodities of scientific progress especially in essential sectors such as healthcare and as a result research is now carried out in an increasingly globalized context protected by national and international law This freedom can however be problematic if it is decoupled from a commitment to academic responsibility scientific rigor and good professional conduct Focusing on the example of biomedical research this book examines how various legal systems address the interplay between academic rights and duties More specifically it considers the tension between national constitutions and legal doctrine which tend to focus on concepts such as science inherent laws or professional standards and international law which establishes a right for everyone to enjoy the benefits of scientific progress thereby implying a duty on the part of the academic community to conduct science in a way that maximizes its benefits to society at large The book concludes by proposing policy reforms that aim to balance these demands and thus reduce tensions within the academic system This book will appeal to scholars and students working at the intersection of law and science as well as policymakers and STEM scientists concerned with issues of academic freedom

environmental information are vital for many groups of users and for a number of purposes For example electric utility companies predict demand during heat waves structural engineers design buildings to withstand hurricanes and earthquakes water managers monitor each winter s snow pack and farmers plant and harvest crops based on daily weather predictions Understanding the impact of human activities on climate water ecosystems and species diversity and assessing how natural systems may respond in the future are becoming increasingly important for public policy decisions Environmental information systems gather factual information transform it into information products and distribute the products to users Typical uses of the information require long term consistency hence the operation of the information system requires a long term commitment from an institution agency or corporation The need to keep costs down provides a strong motivation for creating multipurpose information systems that satisfy scientific commercial and operational requirements rather than systems that address narrow objectives Resolving Conflicts Arising from the Privatization of Environmental Data focuses on such shared systems Digital Capitalism Dan Schiller,1999 Schiller explores how corporate domination is changing the political and social underpinnings of the Internet He argues that the market driven policies which govern the Internet are exacerbating existing social inequalities **International Public Goods and Transfer of Technology Under a Globalized Intellectual Property Regime** Keith E.
