Handbook of Groundwater Remediation using Permeable Reactive Barriers David Naftz, Stan J. Morrison, Christopher C. Fuller, James A. Davis, 2002-10-17 Over the last century and a half groundwaters have become contaminated by a growing number of organic and inorganic substances ranging from petroleum derived hydrocarbons to radioactive compounds to cancer causing hexavalent chromium The importance of uncontaminated groundwater for agriculture human consumption and the environmental health of ecosystems is paramount to the health and productivity of industrial society Water scientists and managers are focused on developing cost effective methods to reverse this trend Several methodologies have been

developed however few are as cost effective as the use of readily available materials such as iron and organic compost for absorbing and isolating contaminants within the matrix of a permeable barrier The Handbook of Groundwater Remediation using Permeable Reactive Barriers presents readers with this latest technology and developments within four main sections 1 Innovations in Design Construction and Evaluation of PRBs2 Development of Reactive Materials3 Evaluations of Chemical and Biological Processes4 Case Studies of Permeable Reactive Barrier InstallationsThe Handbook is one of the first references specifically on this topic It is an excellent fit for graduate students entering this emerging field as well as professionals conducting research or implementing this technology
