

Defensive Driving Defined

Defensive Driving is a form of training that goes beyond mastery of the rules of the road and the basic mechanics of driving.

The goal is to reduce the risk of driving by anticipating dangerous situations, despite adverse conditions or the mistakes of others. This can be achieved through adherence to a variety of general rules, as well as the practice certain driving techniques.

The driver must operate in such a way that he/she:

- ▶ *Commits no errors himself*
- ▶ *Controls his vehicle to make due allowance for the condition(s) of the road, the weather or the traffic*
- ▶ *Controls his vehicle to make due allowance to avoid the mistakes made by others*

If a driver is only paying attention to his/her own skills, he/she is Driving offensively, not defensively. An offensive driver is not a safe driver.

Driving Offensively:

Driver Behavior Analysis and Decision-Making for Autonomous Driving at Non-Signalized Inner City Intersections

Weinreuter, Hannes, 2025-01-17 The focus of this work is on human driving behavior in road traffic. Two aspects of it are covered: the prediction of it including the identification of relevant influencing factors as well as the behavior generation for autonomous vehicles. The behavior prediction is based on a field study during which participants drove a measurement vehicle through inner city traffic. Using the driven trajectories and lidar recordings, complexity features to describe the surroundings at the intersection, the traffic there, and the driving path are defined. The driving behavior is characterized by further features. Based on the complexity features, regression models are trained to predict the behavior features. For that, linear regression, random forest, and gradient boosting machine are utilized. Different complexity feature sets, including ones that are reduced with the help of an autoencoder, are used for prediction. The results show that the driving behavior can be predicted reliably. However, when using complexity feature sets with only few features, the prediction performance is reduced. In order to obtain a complexity score that is in line with human perception of complexity, an online study using videos of approaches to intersections was conducted. In pairwise comparisons, participants were asked to identify the more complex situation. From that data, complexity scores for the intersection passes included in the study are calculated. Several methods are used to assign these scores to the runs of the original field study. Behavior regression models are trained using these assigned complexity scores. The results show that behavior prediction with the complexity scores is possible; however, most variants require to also consider the turning direction as a second feature. The behavior generation for decision making at T intersections is based on a discrete event system (DES). For it, several features are used to define events that describe the status of the decision making process at the intersection. The events trigger the transitions between the states of the DES. All states are associated with either offensive or defensive driving behavior, which is implemented using the intelligent driver model. The algorithm is validated with a simulation framework. Using a generic map and several real maps, the decision making model is simulated 14400 times while interacting with further cooperation vehicles. None of these runs resulted in a collision involving the vehicle running the algorithm, and the times to pass the intersection can be explained by the numbers of cooperation vehicles and the intersection layouts. Further simulations are used to investigate the influence of limited visibility at the intersections on the model.

Is Driving with a Good Attitude Scan for You? Jim Hamilton, 2020-04-10

First, before you start your engine, write down the words GOOD ATTITUDE SCAN and tape them inside your vehicle where you can read them so as to get your mind into the proper safe driving attitude before starting your vehicle. Older and beginning drivers need to be in a safe driving mind set when entering the automated environment. While in the automated environment, people need to be thinking about being aware of the numerous potential vulnerabilities that surround them at the immediate moment. A good message to put on the dashboard would be: Turn off the cell phone. It is now vulnerability.

count time Using a safe driving scan process is a mental awareness necessity while driving do not start your engine without using it A person needs to keep a continuous focus relating to the potential vulnerabilities within their driving environment What will enable the driver to be continually aware will be their thoughts relating to potential vulnerabilities that could occur Being aware of the potential hazards that could happen will help you to become a better and safer driver **The Tarot**
