Drug Discovery For Nervous System Diseases:

Drug Discovery for Nervous System Diseases Franz Hefti, 2005 The neurosciences have been an especially difficult field for drug discovery Because of the huge complexity of the nervous system and poor understanding of most psychiatric and neurological diseases most drugs currently available are the result of chance observations rather than a truly comprehensive approach However this situation has begun to change Enormous progress in molecular biology has yielded breakthrough discoveries of the causes of nervous system diseases opening the door for better targeted and entirely novel therapies Reflecting these recent advances Drug Discovery for Nervous System Diseases presents the latest techniques and approaches for drug discovery organizing them according to diseases rather than classes of drugs or drug targets as past books have done Written with optimistic anticipation of great progress still to come this text provides both a guide to present realities and a look to future possibilities in this burgeoning field Coverage in Drug Discovery for Nervous System Diseases includes Fundamentals of drug discovery receptors target selection and drug development Schizophrenia Depression Anxiety disorders Alzheimer s disease Parkinson s disease Ischemic stroke brain and spinal cord injury Other neurodegenerative diseases Sleep disorders Epilepsy Pain This practical handbook features a uniform presentation for each chapter with a brief description of existing drugs leading to recent molecular biological and genetic findings translational research and the interface to clinical trials and finally an outlook on future drug targets Rich illustrations schematic diagrams and tables provide a dynamic visual experience throughout the text A unique and up to date guide to a field currently undergoing a major growth spurt Drug Discovery for Nervous System Diseases offers both practitioners and advanced students an unparalleled resource

Improving and Accelerating Therapeutic Development for Nervous System Disorders Institute of Medicine, Board on Health Sciences Policy, Forum on Neuroscience and Nervous System Disorders, 2014-02-06 Improving and Accelerating Therapeutic Development for Nervous System Disorders is the summary of a workshop convened by the IOM Forum on Neuroscience and Nervous System Disorders to examine opportunities to accelerate early phases of drug development for nervous system drug discovery Workshop participants discussed challenges in neuroscience research for enabling faster entry of potential treatments into first in human trials explored how new and emerging tools and technologies may improve the efficiency of research and considered mechanisms to facilitate a more effective and efficient development pipeline There are several challenges to the current drug development pipeline for nervous system disorders The fundamental etiology and pathophysiology of many nervous system disorders are unknown and the brain is inaccessible to study making it difficult to develop accurate models Patient heterogeneity is high disease pathology can occur years to decades before becoming clinically apparent and diagnostic and treatment biomarkers are lacking In addition the lack of validated targets limitations related to the predictive validity of animal models the extent to which the model predicts clinical efficacy and regulatory barriers can also impede translation and drug development for nervous system disorders Improving

and Accelerating Therapeutic Development for Nervous System Disorders identifies avenues for moving directly from cellular models to human trials minimizing the need for animal models to test efficacy and discusses the potential benefits and risks of such an approach This report is a timely discussion of opportunities to improve early drug development with a focus toward preclinical trials *Phytochemical Drug Discovery for Central Nervous System Disorders* Chukwuebuka

Therapeutic Development in the Absence of Predictive Animal Models of Nervous System Disorders National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Forum on Neuroscience and Nervous System Disorders, 2017-05-24 Compared with other disease areas central nervous system CNS disorders have had the highest failure rate for new compounds in advanced clinical trials Most CNS drugs fail because of efficacy and the core issue underlying these problems is a poor understanding of disease biology Concern about the poor productivity in neuroscience drug development has gained intensity over the past decade amplified by a retraction in investment from the pharmaceutical industry This retreat by industry has been fueled by the high failure rate of compounds in advanced clinical trials for nervous system disorders In response to the de-emphasis of CNS disorders in therapeutic development relative to other disease areas

such as cancer metabolism and autoimmunity the National Academies of Sciences Engineering and Medicine initiated a series of workshops in 2012 to address the challenges that have slowed drug development for nervous system disorders Motivated by the notion that advances in genetics and other new technologies are beginning to bring forth new molecular targets and identify new biomarkers the Academies hosted the third workshop in this series in September 2016 Participants discussed opportunities to accelerate early stages of drug development for nervous system disorders in the absence of animal models that reflect disease and predict efficacy This publication summarizes the presentations and discussions from the workshop

Human iPSC-derived Disease Models for Drug Discovery Markus H. Kuehn, Wei Zhu, 2023-11-23 Since their development a decade ago human induced pluripotent stem cells iPSC have revolutionized the study of human disease given rise to regenerative medicine technologies and provided exceptional opportunities for pharmacologic research These cells provide an essentially unlimited supply of cell types that are difficult to obtain from patients such as neurons or cardiomyocytes or are difficult to maintain in primary cell culture iPSC can be obtained from patients afflicted with a particular disease but in combination with recently developed gene editing techniques can also be modified to generate disease models Moreover the new techniques of 3 Dimensional printing and materials science facilitate the generation of organoids that can mirror organs under disease conditions These properties make iPSC powerful tools to study how diseases develop and how they may be treated In addition iPSC can also be used to treat conditions in which the target cell population has been lost and such regenerative approaches hold great promise for currently untreatable diseases including cardiac failure or photoreceptor degenerations

Targeting Ion Channels for Drug Discovery: Emerging Challenges for High Throughput Screening Technologies Ciria Hernandez, Luis Eduardo Diaz Gimenez, Jean-Marc Taymans, Tim Strassmaier, Marc Rogers, 2024-06-07 Ligand and voltage gated ion channels are highly regulated protein molecules that cross the cell membrane allowing ion flow from one side of the membrane to the other They are ubiquitously expressed in human tissues and consist of one of the largest and best understood functional groups of proteins with more than 400 members spanning nearly 1% of the human genome They are involved in a variety of fundamental physiological processes and their malfunction causes numerous diseases In terms of the challenges faced in the effort to discover specific drugs in ancient and emerging diseases ion channels are the third largest class of target proteins after G protein coupled receptors GPCRs and kinases 15% of small molecule drug targets have been reported to be voltage or ligand gated ion channels resulting in approximately 150 new drug candidates in preclinical and clinical studies Of the ion channel targeting drugs found on the market these were identified more than a decade ago and many of the current studies are at various stages of scientific approval Overcoming these challenges has led the field of ion channel drug discovery to transform over the past 15 years through major advancements in genetic target detection validation structure based drug design and drug modeling of cell based diseases
