

Defining the Medicare Severity Diagnosis Related Groups (MS-DRGs), Version 42.0

The development of the DRGs was begun by dividing all possible principal diagnoses into mutually exclusive principal diagnosis areas referred to as Major Diagnostic Categories (MDCs). The MS-DRGs within each MDC are defined by a particular set of patient attributes which include principal diagnosis, specific secondary diagnoses, procedures, sex, and discharge status. Appendix A in the ICD-10 MS-DRG Definitions Manual contains a list of each MS-DRG with a specification of the MDC and whether the MS-DRG is medical or surgical.

The purpose of this document is to explain the patient attributes which define each MS-DRG. For each MDC, the following information is provided:

1. A listing of the MS-DRGs in the MDC. The surgical MS-DRGs are listed in hierarchical GROUPER order rather than strict numerical order. See page 4 of this document for more on the surgical hierarchy.
2. A listing of all the ICD-10-CM diagnosis codes assigned to the MDC.
3. A logic table that provides a detailed description of patient attributes which define each MS-DRG in the MDC.

Each logic table specifies in its columns the conditions which determine the MS-DRG assigned. The rows specify individual MS-DRGs. Each cell in the logic table indicates whether a specific condition in the column is necessary for the MS-DRG in the row to be assigned. The combination of the cells which are required for a specific MS-DRG represent a complete description of the assignment logic for that MS-DRG.

In the sample logic table below, discharge status and the presence of either a major complication or comorbidity (MCC) or complication or comorbidity (CC) will define the MS-DRG assignment. With a discharge status indicating that the patient was discharged alive, the presence of an MCC would assign the patient to MS-DRG 280, a CC would assign the patient to MS-DRG 281, while having neither would assign the patient to MS-DRG 282. If the discharge status indicates the patient died, an MCC would assign the patient to MS-DRG 283, a CC would assign the patient to MS-DRG 284, while having neither an MCC or CC would assign the patient to MS-DRG 285.
