Soil Quality, Sustainable Agriculture and Environmental Security in Central and Eastern Europe M.J. Wilson, B. Maliszewska-Kordybach, 2012-12-06 Agriculture is a crucial component of the economies of many of the countries in transition from a centrally planned to a market economy and the sector is by no means immune to the environmental and socioeconomic problems confronting the countries as a whole The concept of sustainable development provides a convenient framework for the formulation of government environmental policy for such countries especially those of them that aspire to join the EU and would thus be expected to meet EU environmental standards For agriculture this inevitably involves appropriate strategies for balancing crop and animal production while protecting the quality of the national soil and water resources There is thus an urgent need to compile exchange and evaluate current information on the quality of soils in these countries and to assess the potential impact of new management practices on the soil and on the wider environment

Challenges and Strategies of Dryland Agriculture S.C. Rao, 2011-01-01 The world has made remarkable progress in maintaining adequate food supplies during the past quarter century by introducing yield increasing technologies such as better genetics crop protection products and more efficient use of fertilizers and irrigations Far more people depend on irrigation in the modern world than during the times of ancient Sumeria The spread of irrigation has been the key factor in increasing global crop yields But future scarcity present the single biggest threat to future food production The shift of water from agriculture to the growing cities and industry almost certainly will impact global food production This means that dryland agriculture will be increasingly important in meeting food requirement for the growing population Advances in plant genetics and agronomic conservation technologies when considered in concert continue to provide the greatest opportunities to achieve sustainability and profitability in dryland agriculture and will continue to be the focus of the ARS research program The ARS is please to join the crop Science Society of America and international center for Agriculture Research in Dry Areas ICARDA in sponsoring a symposium Challenges and strategies for Dryland Agriculture at the Trisocieties Annual Meeting in November 2002 at Indianapolis IN This special publication contains an impressive series of paper by international group of experts on dryland agricultural production conservation and policy The principles philosophies and technologies presented in this publication have the potential to contribute to improve food security and livelihoods for the people in

dryland regions of the world *Nitrogen Management in Crop Production* Nand Kumar Fageria, 2014-06-25 One of the main approaches for safeguarding food security sustainable development has increased demand for knowledge on fertilizer management in crop production Among essential plant nutrients nitrogen is one of the most important yield limiting nutrients mainly responsible for determining yield and yield components in cereals and legumes It is also responsible for the activation of many enzymes and of course plays an important role in photosynthesis With a recovery efficiency of less than 50 percent in most cropping systems a large portion of the nitrogen applied as fertilizer is not used by plants creating environmental and economic issues Nitrogen Management in Crop Production covers the critical aspects for the judicious use of nitrogen in cropping systems This includes appropriate methods of nitrogen application effective source and timing of application during crop growth cycles use of an adequate application rate to avoid loss and reduce cost use of nitrogen efficient crop genotypes and use of legumes that fix sufficient amounts of atmospheric nitrogen There is also a chapter on organic matter and its role in sustainability This book presents recent information from the international literature making it relevant for most agroecological regions Chapters provide experimental results to aid in practical application of the information The book contains color photos of nitrogen deficiency symptoms to serve as a guide for important crop species such as rice dry bean wheat soybean and corn It also includes numerous tables and figures providing an easy to read reference **Alternative Farming Systems, Biotechnology, Drought Stress and Ecological Fertilisation** Eric
