Consistency Of Foodstuffs:

Consistency of Foodstuffs T. Sone, 2011-11-05 It has become increasingly clear that more attention is being paid to the physical chemistry and texture of foodstuffs as developments in food technology proceed more rapidly Rheology which has been skillfully introduced into polymer technology during recent years should also be of direct relevance to food technology The consistency of foodstuffs not only influences the processing of materials e g transport mixing etc but it is also important for controlling the quality of food products An older friend of mine Dr T Takano and I have published a book *Flow and Transport in Food Technology* in which we explained the concepts of rheology in the first part and discussed the technological applications in the latter part As far as text books on the subject of rheology of foodstuffs are concerned we have only a few at the present for example *Foodstuffs their Plasticity Fluidity and Consistency* edited by Dr Scott Blair and *Agricultural Rheology* written by Dr Scott Blair and Dr Reiner Although they are now classical works there is clearly a difference between the social conditions of European countries and Japan

Food Texture and Viscosity, 2012-12-02 Drawing together literature from a myriad of sources this book focuses on the texture and viscosity of food as well as the techniques for measuring these properties *Food Texture and Viscosity Concept and Measurement* includes a brief history of the field and its basic principles and then goes on to provide a detailed discussion of the physical interactions between the human body and food objective methods of texture measurements commercially available instruments and their uses various types of viscous flow and sensory methods for measuring texture and viscosity An appendix lists names and addresses of suppliers for anyone interested in purchasing equipment Incorporating material from numerous sources across a wide range of disciplines this book will prove valuable to students faculty researchers and anyone working in food technology and sensory evaluation

Texture Measurement of Foods A. Kramer, A.S. Szczesniak, 2012-12-06 Even before the publication of Special Technical Publication 433 of the American Society for Testing and Materials it became obvious that the brief treatment given to the principles and techniques

for sensory measurement and analysis of texture in that volume was all too brief hence a task force of ASTM Committee E 18 was formed to develop an authoritative and comprehensive volume on this most complex and important subject to provide within one cover for the student researcher and the food manufacturer a definition and an understanding of the subject of food texture as well as sensory and objective methods for its measurement This most difficult task appeared to be possible only after the task force had obtained the assistance of specialists in the many disciplines involved and after deciding to limit the dissertation to the measurement of texture of foods only The task was further clarified when Dr Finney proposed an outline of six chapters beginning with one on definition The second chapter was to be on principles of sensory evaluations the third on sensory measurements the fourth on principles of objective evaluation the fifth on objective measurements and the final concluding chapter on subjective objective analogues The first drafts of these six chapters constituted a symposium on texture presented before a joint session at the 1971 Annual Meeting of the Institute of Food Technology and the American Society for Testing and Materials

Food Analysis Yeshaiah Pomeranz, Clifton E. Meloan, 2000 A text for undergraduate and graduate students in food science and technology as well as a reference and source book on analytical methods and instruments for professional researchers in the field of food analysis This revised edition 2nd ed 1987 adds new chapters on capillary zone electrophoresis and thermal analysis and expanded discussions of sampling preparation of samples reporting results reliability of results extraction with supercritical fluid techniques and line process monitoring

Feeding and the Texture of Food Julian F. V. Vincent, P. J. Lillford, 1991-10-24 The texture of food and the feeding adaptations of various animals are investigated with the intention of enabling the food industry to produce more appetising foodstuffs

Techniques to Measure Food Safety and Quality Mohidus Samad Khan, Mohammad Shafiur Rahman, 2021-09-22 This book addresses the basic understanding of food contaminants and their sources followed by the techniques to measure food safety and quality It is divided into four parts Part A sources of contaminants in foods their associated health risks and integrated management and alternative options to minimize contaminants Part B Technological assessment of conventional methods and selected advanced methods for the detection identification and enumeration of microbial contaminants Part C Technological assessment of different chemical measurements techniques and Part D Technological assessment of different instrumental techniques to assess sensory properties of foods Food safety is a growing concern due to the increase in food borne illnesses caused by food adulteration excessive use of pesticides use of chemical preservatives and artificial fruit ripening agents microbial contaminations and improper food handling Chemical contaminants in food could be transferred from environmental or agrochemical sources personal care products and other by products of water disinfects In addition microbial food safety can be threatened due to the presence of many pathogens such as Salmonella Escherichia coli Clostridium botulinum Staphylococcus aureus and Listeria monocytogenes in foods Globally strict regulations are imposed to limit the potential contaminants in foods

Development of accurate rapid and inexpensive approaches to test food contamination and adulteration would be highly valued to ensure global food safety. There are existing processes to ensure safety of food products from chemical and microbial contaminants. Apart from the existing measurement technologies, varieties of new techniques are also being emerged and these could be potential to ensure food safety and quality. In addition to chemical and microbial properties, sensory properties such as texture, mouth feel, flavor and taste are among the most important attributes of food products to ensure their acceptability by consumers. Two approaches are available to evaluate sensory properties of food products, namely subjective and objective analyses. The responses are perceived by all five senses: smell, taste, sight, touch and hearing. The approach used in sensory evaluation varies depending on the types of foods and the ultimate goal of the testing. Sensory attributes are the most important quality parameters after ensuring the safety of foods.

Food Texture Design and Optimization Yadunandan Lal Dar, Joseph M. Light, 2014-05-27

Food texture has evolved to be at the forefront of food formulation and development. Food Texture Design and Optimization presents the latest insights in food texture derived from advances in formulation science as well as sensory and instrumental measurement. This unique volume provides practical insights for professionals who are starting in the field as well as experts looking to enhance their knowledge or expand into new areas. The first part of this book presents case studies on formulating products in a broad variety of application segments such as cheese, ice cream, baked goods, gluten free products, low fat, non fat dairy products and more. Challenges related to maintaining texture while optimizing nutritional content, cost, flavor and other attributes of the food product are investigated. The book also highlights the importance of texture design and optimization in several types of food products and demonstrates how experts have applied this knowledge in the industry. Part two provides an overview of the latest advances in tools and techniques for food texture design and optimization, focusing on the use of instrumental techniques, the application of sensory techniques and the use of marketing and consumer insight tools in the design and optimization of food products. The ability to use advanced characterization techniques in this field is critical for both new and established practitioners in tackling the problems they face. Food Texture Design and Optimization serves as an important reference for technical practitioners on how to adopt advanced techniques in food texture research. This information is invaluable in reviewing, establishing the state of the art in this field and providing a minimum recommended standard for food formulators.

Introduction to Food Process Engineering Albert Ibarz, Gustavo V. Barbosa-Canovas, 2014-04-10

Consumer expectations are systematically growing with demands for foods with a number of attributes which are sometimes difficult for manufacturers to meet. The engineering processes that are needed to obtain top quality foods are a major challenge due to the diversity of raw materials, intermediates and final products. As in any other enterprise, the food industry must optimize each of the steps in the production chain to attain the best possible results. There is no question that a very important aspect to take into consideration when developing a process

designing a food factory or modifying existing facilities is the in depth knowledge of the basic engineering aspects involved in a given project Introduction to Food Process Engineering covers the fundamental principles necessary to study understand and analyze most unit operations in the food engineering domain It was conceived with two clear objectives in mind 1 to present all of the subjects in a systematic coherent and sequential fashion in order to provide an excellent knowledge base for a number of conventional and unconventional processes encountered in food industry processing lines as well as novel processes at the research and development stages 2 to be the best grounding possible for another CRC Press publication Unit Operations in Food Engineering Second Edition by the same authors These two books can be consulted independently but at the same time there is a significant and welcomed match between the two in terms of terminology definitions units symbols and nomenclature Highlights of the book include Dimensional analysis and similarities Physicochemistry of food systems Heat and mass transfer in food Food rheology Physical properties Water activity Thermal processing Chilling and freezing Evaporation Dehydration Extensive examples problems and solutions
