Taslitz, Margaret Paris, 2002 **Basic Theory of Criminal Law** Michiaki Ozaki, 2025-09-27 This book examines the underlying principles of criminal law both substantive and procedural law In continental law countries the analysis of substantive criminal law has relied heavily on concepts such as retribution and free will under the strong influence of German legal thought However these concepts often lack a scientific basis and mean little for the function of criminal law in the real world Norms prohibiting criminal conduct are not mere ideas but intersubjectively existent objects that affect human behavior and function in unique ways As such their force naturally depends on their enforcement These norms function as a determinant factor in the decisions made through human consciousness otherwise criminal law would have no deterrent effect However this does not mean that the freedom guaranteed in liberal democracy can be violated arbitrarily its protection must be the second principle of criminal law Based on these discussions this book proposes to take normative determinism and utilitarianism as the basis of analysis and to establish normative deterrence and the protection of freedom as the two pillars of criminal law With regard to procedural criminal law this book argues that we should look at the adversarial and inquisitorial systems in their actual function rather than focusing on their respective ideological doctrines and try to identify the common practical principles to be followed from a utilitarian point of view In these discussions the

book extensively examines the historical background of the two systems and examines as an example the serious deficiencies of the current criminal justice system in the United States What is argued and proposed in this book is a creative application and development in the field of criminal law of the theory elucidated by H L A Hart and Jeremy Bentham
