Considering The Radiance:

The Buddhist Sogdian Texts of the British Library D.N. MacKenzie, 2023-08-14 **Deep Learning for Fluid Simulation and Animation** Gilson Antonio Giralaldi, Liliane Rodrigues de Almeida, Antonio Lopes Apolinário Jr., Leandro Tavares da Silva, 2023-11-24

This book is an introduction to the use of machine learning and data driven approaches in fluid simulation and animation as an alternative to traditional modeling techniques based on partial differential equations and numerical methods and at a lower computational cost This work starts with a brief review of computability theory aimed to convince the reader more specifically researchers of more traditional areas of mathematical modeling about the power of neural computing in fluid animations In these initial chapters fluid modeling through Navier Stokes equations and numerical methods are also discussed The following chapters explore the advantages of the neural networks approach and show the building blocks of neural networks for fluid simulation They cover aspects related to training data data augmentation and testing The volume completes with two case studies one involving Lagrangian simulation of fluids using convolutional neural networks and the other using Generative Adversarial Networks GANs approaches

Handbook of Image Processing and Computer Vision Arcangelo Distanto, Cosimo Distanto, 2020-05-28

Across three volumes the Handbook of Image Processing and Computer Vision presents a comprehensive review of the full range of topics that comprise the field of computer vision from the acquisition of signals and formation of images to learning techniques for scene understanding The authoritative insights presented within cover all aspects of the sensory subsystem required by an intelligent system to perceive the environment and act autonomously

Volume 1 From Energy to Image examines the formation properties and enhancement of a digital image Topics and features Describes the fundamental processes in the field of artificial vision that enable the formation of digital images from light energy Covers light propagation color perception optical systems and the analog to digital conversion of the signal Discusses the information recorded in a digital image and the image processing algorithms that can improve the visual qualities of the image Reviews boundary extraction algorithms key linear and geometric transformations and techniques for image restoration Presents a selection of different image segmentation algorithms and of widely used algorithms for the automatic detection of points of interest Examines important algorithms for object recognition texture analysis 3D reconstruction motion analysis and camera calibration Provides an introduction to four significant types of neural network namely RBF SOM Hopfield and deep neural networks This all encompassing survey offers a complete reference for all students researchers and practitioners involved in developing intelligent machine vision systems The work is also an invaluable resource for professionals within the IT software and electronics industries involved in machine vision imaging and artificial intelligence
