Constructing A Competitive Order:

Constructing Civil Liberties Ken I. Kersch, 2004-08-02 This book provides a revisionist account of the genealogy of contemporary constitutional law and morals

Competition Law Reform in Britain and Japan Kenji Suzuki, 2003-09-02 As market competition replaces state regulation in many economic fields competition policy has become an area of increasing significance Against this background Suzuki highlights the importance of the domestic political structure for competition policy He does this through the comparative analysis of competition law reforms in Britain and Japan He argues controversially that a country's domestic political structure should be considered a major factor in causing the reform of competition law and rejects the established view that it is necessarily a result of changes in international economic and political conditions

Creating Shared Value as Future Factor of Competition Benedikt von Liel, 2016-05-13 Benedikt von Liel provides a theoretical and empirical analysis of the concept of Creating Shared Value CSV In the theoretical analysis the author assesses the uniqueness of the theory of Creating Shared Value by comparing it to other relevant social responsibility concepts The empirical analysis provides insights from over 60 industry case studies of Creating Shared Value The assessment includes the influence of geography as well as a range of other relevant external and internal factors As a result the author identifies critical success factors for the creation of shared value

Never Ending Nightmare Pierre Dardot, Christian Laval, 2019-04-16 How do we explain the strange survival of the forces responsible for the 2008 economic crisis one of the worst since 1929 How do we explain the fact that neoliberalism has emerged from the crisis strengthened When it broke a number of the most prominent economists hastened to announce the death of neoliberalism They regarded the pursuit of neoliberal policy as the fruit of dogmatism For Pierre Dardot and Christian Laval neoliberalism is no mere dogma Supported by powerful oligarchies it is a veritable politico institutional system that obeys a logic of self reinforcement Far from representing a break crisis has become a formidably effective mode of government In showing how this system crystallized and solidified the book explains that the neoliberal straitjacket has succeeded in preventing any course correction by progressively deactivating democracy Increasing the disarray and demobilization the so called governmental Left has actively helped strengthen this oligarchical logic The latter could lead to a definitive exit from democracy in favour of expertocratic governance free of any control However nothing has been decided yet The revival of democratic activity which we see emerging in the political movements and experiments of recent years is a sign that the political confrontation with the neoliberal system and the oligarchical bloc has already begun

The Many Constitutions of Europe Suvi Sankari,2016-03-03 This volume makes a contribution to the ongoing lively discussion on European constitutionalism by offering a new perspective and a new interpretation of European constitutional plurality The book combines diverse disciplinary approaches to the constitutional debate It brings together complementing contributions from scholars of European politics economics and sociology as well as established scholars from various fields of law Moreover it provides analytical clarity to the discussion and combines theory with more practical and critical approaches that make use of the constitutional toolbox in analysing the tensions between the different constitutions The collection is a valuable point of reference not only for scholars interested in European studies but also for graduate and post graduate students

Strategic information systems management for environmental sustainability : enhancing firm competitiveness with Green IS Löser, Fabian,2015-07-06 During the last three decades information and communication technologies have fundamentally changed the way we work live and communicate The ubiquity of internet services which become increasingly interactive and complex together with enhanced connectivity facilitated by innovative mobile devices induces an ever rising demand for computing storage and data transmission capacities Today information systems IS constitute the backbone of the globalized economy and are indispensable for modern business and production processes At the same time environmental sustainability has evolved as the most pressing societal challenge of the 21st century in particular due to the looming threats of climate change By virtue of their global influence and reach business companies significantly contribute to the creation of environmental problems but owing to their organizational knowledge capabilities and resources they also have the capacity and ability to play a key role in shaping the path towards a more sustainable development The companies leading the way

have noticed that corporate sustainability is not necessarily a burden that negatively impacts their bottom line. If strategically managed, environmental product and process innovations can decrease operational costs, enhance corporate reputation, and differentiate from competitors. With regard to environmental sustainability, IS play a contradictory role. On the one hand, the manufacturing operation and disposal of information technology (IT) infrastructure are responsible for serious environmental impacts, from the mining of conflict minerals to carbon dioxide emissions that equal those of the airline industry to enormous amounts of toxic e-waste. On the other hand, IS are perceived as key enablers of a green economy: environmental management systems and the reengineering of business processes can substantially reduce the environmental impacts of business organizations, while technological innovations provide opportunities to decrease the ecological footprint of end-user products and services. Many organizations have started to implement first environmental measures to decrease IT energy consumption and to reduce operational costs, mostly in an unstructured and uncoordinated manner, though. Although Green IS practices feature a considerable potential to increase corporate environmentalism while creating promising business opportunities, the adoption of enterprise-wide cross-functional initiatives aimed at implementing Green IS has been rather slow. Economic uncertainties regarding the long-term effects of Green IS adoption and the lack of appropriate management frameworks have been identified as main inhibitors of an encompassing implementation of Green IS initiatives throughout the enterprise. In this context, this thesis addresses relevant research gaps, contributes to theory development in the evolving Green IS research discipline, develops practice-oriented management frameworks, and emphasizes the importance of following a strategic approach to leverage the competitive potential of Green IS. This cumulative thesis comprises an introduction that includes a literature review and a pre-study, four theory-based conceptual research articles, and two empirical studies: one of them building on qualitative exploratory case study research, whereas the other relies on quantitative data which has been analyzed with structural equation modeling. This thesis targets four specific research goals to advance theory building in Green IS research and to promote the adoption of Green IS in practice. First, this thesis clarifies and defines the central terms and key concepts: Green IT, Green IS, Green IS strategy, and Green IS practices, drawing on a transdisciplinary research approach. Second, the most important challenges and inhibitors of Green IS adoption are identified and characterized. In particular, the lack of management frameworks which encourage a holistic implementation that follows a strategic rationale, the complexity of strategic Green IS alignment, the multi-dimensional performance impacts of cross-functional initiatives, and above all, the uncertainty relating to the business case of Green IS practices are identified as the most pressing challenges. Third, current actions of business firms to address these challenges are examined. Building on exploratory case study research, distinctive Green IS strategies are identified in managerial practice. Most notably, the empirical insights from quantitative survey research suggest a positive relationship between Green IS adoption and firm competitiveness, thus decreasing the economic uncertainty which inhibits the implementation of far-reaching environmental initiatives. Fourth, practice-oriented

management frameworks are developed The fine grained Green IS strategy concept advises the formulation of strategies addressing the corporate competitive and functional management level The proposed typology of four Green IS strategies illustrates distinct strategic options from which executives can choose under consideration of their competitive targets and the firm specific context To allow for consistency of Green IS strategies the presented alignment framework facilitates coherence with economic and environmental corporate goals Furthermore the actors roles and responsibilities relevant to the alignment process are described In addition a management framework for the holistic adoption of Green IS which specifies decisive management areas and distinguishes between three degrees of environmental impacts is presented along with a comprehensive catalogue of Green IS implementation measures As a consequence this research offers both empirical insights and conceptual models to advance the adoption of Green IS initiatives thus meeting the challenges of climate change and turning corporate sustainability into a business opportunity
