How Consumers Use Product Information William L. Wilkie,1975 **Mathematical Models in Marketing** Ursula H. Funke,2013-04-17 Mathematical models can be classified in a number of ways e g static and dynamic deterministic and stochastic linear and nonlinear individual and aggregate descriptive predictive and normative according to the mathematical technique applied or according to the problem area in which they are used In marketing the level of sophistication of the mathematical models varies considerably so that a number of models will be meaningful to a marketing specialist without an extensive mathematical background To make it easier for the nontechnical user we have chosen to classify the models included in this collection according to the major marketing problem areas in which they are applied Since the emphasis lies on mathematical models we shall not as a rule present statistical models flow chart models computer models or the empirical testing aspects of these theories We have also excluded competitive bidding inventory and transportation models since these areas do not form the core of the marketing field

Building Models for Marketing Decisions Peter S.H. Leeflang,Dick R. Wittink,Michel Wedel,Philippe A. Naert,2013-06-29 This book is about marketing models and the process of model building Our primary focus is on models that can be used by managers to support marketing decisions It has long been known that simple models usually outperform judgments in predicting outcomes in a wide variety of contexts For example models of judgments tend to provide better forecasts of the outcomes than the judgments themselves because the model eliminates the noise in judgments And since judgments never fully reflect the complexities of the many forces that influence outcomes it is easy to see why models of actual outcomes should be very attractive to marketing decision makers Thus appropriately constructed models can provide insights about structural relations between marketing variables Since models explicate the relations both the process of model building and the model that ultimately results can improve the quality of marketing decisions Managers often use rules of thumb for decisions For example a brand manager will have defined a specific set of alternative brands as the competitive set within a product category Usually this set is based on perceived similarities in brand characteristics advertising messages etc If a new marketing initiative occurs for one of the other brands the brand manager will have a strong inclination to react The reaction is partly based on the manager s desire to maintain some competitive parity in the marketing variables
