*Childhood Glaucoma* Shikha Gupta, Karthikeyan Mahalingam, Viney Gupta, 2023-11-30 The book provides a comprehensive treatise on all aspects of congenital and pediatric glaucoma. Pediatric glaucoma due to dependence on anaesthesia facility are usually managed only in tertiary eye care centers. Being a difficult entity for comprehensive evaluation many ophthalmologists lack adequate experience in diagnosing and managing this specialized group of patients. Pediatric glaucoma are an important cause of ocular morbidity and visual impairment which if diagnosed in time pays dividend in terms of improved quality of life, visual outcome and less disability associated. Life years in this young age group. Early diagnosis, prompt and effective treatment and rehabilitation play an important role in final visual outcomes. The book covers all important aspects of pediatric examination beginning from clinical examination, diagnostic investigations and treatment protocols. Certain examinations like intraocular pressure measurement, gonioscopy, detailed fundus examination need sedation/anaesthesia. The video based procedural modules aim to explain standard protocols for performing basic examination in children such as under anaesthesia or sedation. It has a case based approach for all types of childhood glaucomas which helps the residents, glaucoma fellows and practicing ophthalmologists alike to identify different types of childhood glaucomas, plan respective management and refer early whenever indicated for these conditions. The book will serve as a ready reckoner, an authentic reference book and a teaching tool for practicing glaucoma specialists, general ophthalmologists, ophthalmology residents and glaucoma fellows. The editors have extensive experience in dealing with pediatric glaucoma and contributed years of teaching and research in this field. This book primarily consists of images, diagrams, case presentations and illustrative videos wherever required. It illustrates the clinical findings of different pediatric glaucomas and hence acts as a practical teaching tool by providing a plethora of clinical pictures in adjunct to a short case scenario.

**Clinical Atlas of Peripheral Retinal Disorders** Keith M. Zinn, 2012-12-06 A comprehensive understanding of diseases of the peripheral retina is essential to the general ophthalmologist as well as to the vitreoretinal surgeon. Expertise in direct ophthalmoscopy, scleral depression and contact lens biomicroscopy serves as a basis for observing the peripheral retina. These observations are then recorded on fundus drawing paper and the Tolentino vitreo-retinal chart. This orderly sequence of skills allows the ophthalmic surgeon to objectively diagnose and evaluate specific peripheral retinal disorders and plan for their therapeutic management. The Clinical Atlas of Peripheral Retinal Disorders is a compilation of fundus paintings by David A. Tilden based on our observations of a large number of patients over the past 15 years. The atlas is organized along functional and anatomical lines. After a brief introduction to the clinical anatomy of the peripheral retina, the appearance of the fundus as a function of skin color and aging is presented. Many of the diseases of the peripheral retina can

be divided into trophic nutritional tractional and a combination of trophic plus tractional etiologies This classification system although somewhat simplistic appears adequate for our present level of understanding of the pathogenetic mechanisms of these disorders Undoubtedly once the molecular biology of these conditions is elucidated through future research the classification will be revised In addition there are other conditions that affect the peripheral retina that do not fit the proposed classification system and are covered under separate headings i e
