Contemporary Research On Renal Cell Carcinoma Basic And Clinical Developments:

Contemporary Research on Renal Cell Carcinoma Gerd Staehler, Sigmund Pomer, 2012-12-06 The management of advanced renal cell carcinoma is still problematic. Surgery although the therapy of choice for locally advanced renal tumors is still controversial as the treatment for metastases. The role of surgery in the management of patients with pulmonary bony and liver metastasis is one of the subject matters discussed in this book. Our results with series of patients undergoing resection of metastases from the lung bone and liver show that surgery may be appropriate in selected patients with a good performance status although most of them certainly cannot be cured by this procedure alone i.e. in the absence of effective adjuvant therapies. As recent developments show new strategies for immunotherapy of renal cell carcinoma represent a modest advance over traditional approaches in the treatment of this cancer such as chemo and radiotherapy. Clinical trials employing recombinant interferon α and interleukin 2 produced response rates in up to 30% of patients treated as evidenced by the European Immunotherapy Trials Program. The adverse reactions and the lack of efficacy in the majority of patients warrants the search for new immunotherapeutic approaches.

Basic and Clinical Research on Renal Cell Carcinoma Gerd Staehler, Sigmund Pomer, 2012-12-06 Advanced Renal Cell Carcinoma (RCC) cannot be cured by surgery alone. Its resilience to irradiation and chemotherapy demands a new approach to the management of this disease. This book provides an overview of the scientific and clinical developments of RCC and clarifies the fields of immunotherapy and immunobiology. The book contains a compilation of approaches that will enhance the effectiveness of the management of advanced RCC even in the absence of definitive pre-clinical data. These require additional study and will stimulate the reassessment of preliminary results. Furthermore preliminary results of already implemented clinical trials with biological modifiers are presented. Of special interest are the current achievements in the field of immunotherapy using topically and subcutaneously low dosage combinations of cytokines. This concise volume
