Time for Science Education Michael Matthews, 2012-12-06 The book s argument depends as do most proposals in education upon cer tain positions in the philosophy of education I believe that education should be primarily concerned with developing understanding with initiation into worth while traditions of intellectual achievement and with developing capacities for clear analytic and critical thought These have been the long accepted goals of liberal education In a liberal education students should come to know and appreciate a variety of disciplines know them at an appropriate depth see the interconnectedness of the disciplines or the modes of thought and finally have some critical disposition toward what is being learned to be genuinely open minded about intellectual things These liberal goals are contrasted with goals such as professional training job preparation promotion of self esteem social engineering entertainment or countless other putative purposes of schooling that are enunciated by politicians administrators and educators The book s argument might be consistent with other views of education especially ones about the training of specialists sometimes called a professional view of education but the argument fits best with a liberal view of education The liberal hope has always been that if education is done well then other per sonal and social goods will follow The development of informed critical and moral capacities is the cornerstone for personal and social achievements

Improving Science Education Millar, John, 2000-12-01 This book takes stock of where we are in science education research and considers where we ought now to be going It explores how and whether the research effort in

science education has contributed to improvements in the practice of teaching science and the science curriculum. It contains contributions from an international group of science educators. Each chapter explores a specific area of research in science education considering why this research is worth doing and its potential for development. Together they look candidly at important general issues such as the impact of research on classroom practice and the development of science education as a progressive field of research. The book was produced in celebration of the work of the late Rosalind Driver. All the principal contributors to the book had professional links with her and the three sections of the book focus on issues that were of central importance in her work: research on teaching and learning in science, the role of science within the school curriculum and the nature of the science education we ought to be providing for young people and the achievements of and future agenda for research in science education.
