The Process Approach to Personality Gudmund J.W. Smith,2013-04-17 Some Implications of the Perceptogenetic Studies We should be most grateful to Professor Gudmund Smith for this compilation of studies on perceptogenesis PG Smith and his colleagues at Lund University are part of a small insurgency in psychology that has worked gamely and in relative obscurity to document the presence of subjective phases in the process leading to a perceptual object and the infrastructure of this process in the person ality Smith describes ingenious methods to probe this hidden undersurface and of a perceptual object is in the ordinary demonstrate that the experiential content an object sense pre perceptual That is the feeling meaning and recognition of are not attached to

things out there in the world after they are perceived but are phases ingredient in the process through which the perception occurs To most psychologists this statement would appear so radical as to be hardly worth refuting A subjective approach to perception undermines the realism consensual validation and objectivity of a descriptive science of the mind It is much simpler to interpret the psychic contribution to object perception as an addition to physical nature However the idea that objects are assemblies of sensory bits linked to feeling and meaning associated to memories for recognition and interpretation and then projected back into the world where we see them though at first blush appealing to common sense is so implausible that one is mystified by its universal acceptance
