Application Design for Wearable Computing Daniel P. Siewiorek, Asim Smailagic, Thad Eugene Starner, 2008

Annotation This lecture describes application design for wearable computing providing a blend of experiencebased insights learning in application development and guidelines on how to frame problems and address a specific design context followed by more detailed issues and solution approaches at the next level of the application development The lecture takes the viewpoint of a potential designer or researcher in this field and aims to present such an integrated material in one place Designing wearable computer interfaces requires attention to many different factors because of the computers closeness to the body and its use while performing other tasks Among the most challenging questions facing wearable computer designers are user needs and interactions For the purposes of discussion we have created the UCAMP framework which consists of the following factors user corporal attention manipulation and perception Each of these factors and their importance has been described A number of example prototypes developed by the authors as well as the other researchers have been used to illustrate these concepts Wearable computers have established their first foothold in several application domains such as vehicle and aircraft maintenance and manufacturing inspection procedures language translation and other areas The lecture proceeds by describing the next step in the evolution of wearable computers namely context awareness Context aware computing takes into account a users state and surroundings and the mobile computer modifies its behavior based on this information A users context can be quite rich consisting of attributes such as physical location physiological state personal history daily behavioral patterns and so forth If a human assistant were given such context he or she would make decisions in a proactive fashion anticipating user needs and acting as a proactive assistant The goal is to enable mobile computers to play an analogous role exploiting context information to significantly reduce demands on human attention Context aware intelligent agents can deliver relevant information when a user needs that information These data make possible many exciting new applications such as augmented reality context aware collaboration augmented manufacturing and maintenance The combined studies and research reported in this lecture suggest a number of useful guidelines for designing wearable computing devices Also included with the guidelines is a list of questions that designers should consider when beginning to design a wearable computer The research directions section emphasizes remaining challenges and trends in the areas of user interface modalities of interaction and wearable cognitive augmentation Finally we summarize the most important challenges and outline future directions in wearable computing
