Bengtson, Timothy J. Biblarz, Robert E. L. Roberts, 2002-10-17 How Families Still Matter casts doubt on the conventional wisdom about family decline during the last decades of the twentieth century The authors draw from the longest running longitudinal study of families in the world the Longitudinal Study of Generations conducted at the University of Southern California to discover whether parents are really less critical in shaping the life choices and achievements of their children than they were a generation ago They compare the influence of parents on self confidence values and levels of achievement on the Baby Boomer generation with that of Baby Boomer parents on their own Generation X children The findings may surprise many readers Generation X youth showed higher levels of education career attainments and self esteem than their parents as youth and similar values were found across generations They indicate the resilience of family bonds across generations even against the backdrop of massive social and family changes since the 1960s Masculinity and Aspiration

in an Era of Neoliberal Education Garth Stahl, Joseph Nelson, Derron Wallace, 2017-03-16 This collection investigates the ways in which boys and young men negotiate neoliberal discourse surrounding aspiration and how neoliberalism shapes their identities Expanding the field of masculinity studies in education the contributors offer international comparisons of different subgroups of boys and young men in primary secondary and university settings A cross sectional analysis of race gender and class theory is employed to illuminate the role of aspiration in shaping boys identities which adds nuance to their complex identity work in neoliberal times *Retirement* Morris M. Schnore, 2006-01-01 Over the last twenty years in Canada there

has been an increasing trend toward retirement at age sixty five or earlier Despite this trend relatively few social scientists have studied the transition and consequences of retirement The need of Canadian research regarding retirement is especially acute because the processes of retirement are culture bound and generalizations from data gathered in other countries may not be warranted This study bridges that gap providing a model for assessing subjective well being among workers and

retirees and thoroughly testing that model in the field Many of the empirical findings of this study contradict predictions made on the basis of the identity crisis theory of retirement that theory which posited retirement as a degrading experience a self destruction of the image the retiree once had of himself or herself as a worker and productive member of society The indications of the empirical findings presented here are that in fact satisfaction with life or some aspects of it is commonly found to be high or higher among older adults than among the younger In the course of the study the author examines several different theories of adjustment to retirement presents a model for measuring satisfaction among retirees more empirically than has been done and suggests some of the policy decisions that might reasonably be proposed on the basis of the study s findings Presidential Campaign Communication Craig Allen Smith,2010-03-15 Major textbook introduction to the ways that the people of the US use the process of human communication to select their Presidents Looks at the function and effects of talk about American presidential politics in everyday life Spirituality and Aging Robert C. Cox,Neil

Thompson,2022-09-23 There is a huge collection of literature relating to death grief and bereavement but one aspect that has received relatively little attention is that of death management practices by which we mean the various ways of managing the circumstances of the death ritually acknowledging it and sensitively handling the disposal of the body and so on While ways of disposing of the dead and grief practices have been thought of as based upon individual responses grief and bereavement practices can be understood not only by looking at psychological and medical frameworks but also by examining people as part of a complex structure of social arrangements institutions structures and patterns By examining the social and institutional structures of various groups around the world we provide an international framework for a better understanding of the study of dying death and bereavement This book highlights the significance of these matters in an international context reflecting common themes and important differences It will highlight common themes across diverse cultures and national settings while also drawing attention to significant differences If professionals working in the field of death grief and bereavement are not aware of such differences their practice can be insensitive discriminatory and therefore ineffective if not actually counterproductive As such the book provides an invaluable resource for a wide variety of professionals and students including medicine and health care social work counselling and psychotherapy chaplaincy and pastoral work and of course those involved in the funeral industry In addition students of sociology psychology and anthropology will find much of interest here in terms of appreciating the diversity of ways in which funerals and other death management practices are managed and integrated into social life
