Andrew, 2009-04-21 In this book I argue that a reason for the limited success of various studies under the general heading of cybernetics is failure to appreciate the importance of continuity in a simple metrical sense of the term It is with particular but certainly not exclusive reference to the Artificial Intelligence AI effort that the shortcomings of established approaches are most easily seen One reason for the relative failure of attempts to analyse and model intelligence is the customary assumption that the processing of continuous variables and the manipulation of discrete concepts should be considered separately frequently with the assumption that continuous processing plays no part in thought There is much evidence to the contrary including the observation that the remarkable ability of people and animals to learn from experience finds similar expression in tasks of both discrete and continuous nature and in tasks that require intimate mixing of the two Such tasks include everyday voluntary movement while preserving balance and posture with competitive games and athletics offering extreme examples Continuous measures enter into many tasks that are usually presented as discrete In tasks of pattern recognition for example there is often a continuous measure of the similarity of an imposed pattern to each of a set of paradigms of which the most similar is selected The importance of continuity is also indicated by the fact that adjectives and adverbs in everyday verbal communication have comparative and superlative forms **Cybernetics and Applied Systems** Constantin Virgil Negoita, 2018-10-08 In light of the enormous interest in building intelligent systems this volume blends theory applications and methodology of cybernetics taking it out of the realm of the abstract and explaining how cybernetics can contribute to an improved understanding of intelligence Among the topics of the 17 Systems, Cybernetics and Innovations Matjaž Mulej, 2006 This e book is a compilation of selected papers on the theme of Systems cybernetics and innovation from the 13th International Congress of the World Organization of Systems and Cybernetics WOSC Slovenia July 2005 and is guest edited by Professor Matjaz Mulej University of Maribor The articles present research and development in a number of areas Artificial Natural Dualism Economic Systems Education Systems Engineering and Information Systems Grey Systems Management Systems Mathematical Systems Nature Systems Tourism Cybernetics Viable Organizations and World Education Systems Heuristic Programming in Artificial Intelligence David N.
