Continuous Process Improvement Simplifying Work Flow Systems:

Continuous Process Improvement George D. Robson, 2010-06-15 During the past decade Japanese companies have derived many of their competitive advantages from streamlined work flow processes. Desperate to replicate the Japanese systems, American managers have bought into countless theories advanced by management consultants which, lacking a methodology, have proved fruitless and frustrating. Now from inside a world renowned learning organization comes that methodology: Continuous Process Improvement. CPI is an improvement and problem prevention system created and developed by George Robson to empower natural work teams in three General Electric businesses. Composed of a logical set of steps at the heart of which is Process Flow Diagramming, CPI focuses on and simplifies the critical elements of work flow processes and eliminates those parts that add no value. Not only has this methodology helped these GE businesses save in excess of 35 million during the first two years of implementation, but similar techniques are now being employed by leading edge companies throughout the world. CPI is a transportable system that not only has profoundly changed manufacturing practices but has been applied with equal success in all areas of a business. Robson shows how the Iceberg Phenomenon can identify the measurable benefits of accurately accounting for direct and indirect costs by carefully tracking expenses. Planning for the true costs of customer service, marketing concessions, and retraining can turn unplanned losses into short and long term returns on investments. Robson focuses on activities that are critical to quality in design and production and demonstrates how non value added work can be eliminated. The staggering cost of rework calculated in The Rule of Tens is reduced by catching mistakes before they escape to subsequent stages of handling. The CPI system, which has been widely praised within General Electric, will be of broad interest throughout the business and university communities. **DoD**

Performance Assessment Guide, 1995 *Wide Area Workflow Management* Gerold Riempp, 2012-12-06 In this volume Gerold Riempp examines the interaction of different workflow management systems (WFMS) in geographically distributed and legally separate organisations. This is an emerging field of research known as Wide Area Workflow Management (WAWM). He examines the technical and managerial aspects of workflow management via a framework which he has developed to describe the problems involved in WAWM and to find viable solutions. Based on this theoretical framework, the author also develops a prototype software framework, the Wide Area GroupFlow System, to demonstrate the solutions via practical software tools. The tools will be available to the reader via the WWW. Also included are the results of case studies from some of the 15 developers who have been using this software over the past two years. **Mapping Work Processes** Bjørn

Andersen, Tom Fagerhaug, Bjørnar Henriksen, 2002-06-17 This peerless best seller is a hands on step by step workbook of instructions on how to create flowcharts and document work processes. No other book even comes close in teaching practitioners these crucial techniques. The most noticeable change in this second edition is the inclusion of several new types of process maps. While the basic straightforward flowchart is still extensively used, it has been supplemented by a number of

other types all of which serve different purposes The authors have therefore expanded the variety of charts taught All the mapping techniques have also been updated the mapping exercise itself is put into a larger context and organizational examples from many different industries are used throughout to help readers understand real life applications of the material presented Also new is an example case study carried throughout the entire book to illustrate the construction and use of the different types of process maps

Business Process Improvement Toolbox Bjørn Andersen,2007-01-01 The first half of the book presents an overall business process improvement model with the ensuing chapters dealing with topics of understanding and modeling your current business processes using performance measurement in improvement work creating a business process improvement road map and organizing for improvement work The second half of the book presents the overall toolbox followed by one chapter for each phase of the overall improvement model For each of these phases a selection of suitable tools is presented with background steps for how to use them and an example of their use The final two chapters contain two more extensive case studies illustrating the use of the full methodology
