Continuous Analogues Of Fock Space:

Continuous Analogues of Fock Space William Arveson, 1989 The problem of classifying semigroups of endomorphisms of type I_∞ factors to outer conjugacy is reduced to the problem of classifying certain simpler structures associated to them called product systems Product systems are intimately connected with continuous tensor products of Hilbert spaces We develop the general theory of product systems and give a number of applications to semigroups of endomorphisms of von Neumann algebras in particular we introduce a numerical invariant for such semigroups which is analogous to the Fredholm index

Continuous Analogues of Fock Space IV William Arveson, 1989

Continuous analogues of Fock space William Arveson, 1989 **Quantum Probability and Related Topics** Rolando Rebolledo, Miguel Orszag, 2011 This volume contains current work at the frontiers of research in quantum probability infinite dimensional stochastic analysis quantum information and statistics It presents a carefully chosen collection of articles by experts to highlight the latest developments in those fields Included in this volume are expository papers which will help increase communication between researchers working in these areas The tools and techniques presented here will be of great value to research mathematicians graduate students and applied mathematicians

Operator Algebras and Their Applications Peter A. Fillmore, James A. Mingo, 1997 The study of operator algebras which grew out of von Neumann's work in the 1920s and the 1930s on modelling quantum mechanics has in recent years experienced tremendous growth and vitality This growth has resulted in significant applications in other areas both within and outside mathematics The field was a natural candidate for a 1994-1995 programme year in Operator Algebras and Applications held at The Fields Institute for Research in the Mathematical Sciences This volume contains a selection of papers that arose from the seminars and workshops of the programme Topics covered include the classification of amenable C^* algebras the Baum-Connes conjecture E_0 semigroups subfactors E theory quasicrystals and the solution to a long standing problem in operator theory can almost commuting self adjoint matrices be approximated by commuting self adjoint matrices

Groupoids in Analysis, Geometry, and Physics Arlan Ramsay, Jean Renault, 2001 Groupoids often occur when there is symmetry of a nature not expressible in terms of groups Other uses of groupoids can involve something of a dynamical nature Indeed some of the main examples come from group actions It should also be noted that in many situations where groupoids have been used the main emphasis has not been on symmetry or dynamics issues While the implicit symmetry and dynamics are relevant the groupoid records mostly the structure of the space of leaves and the holonomy More generally the use of groupoids is very much related to various notions of orbit equivalence This book presents the proceedings from the Joint Summer Research Conference on Groupoids in Analysis Geometry and Physics held in Boulder CO The book begins with an introduction to ways in which groupoids allow a more comprehensive view of symmetry than is seen via groups Topics range from foliations pseudo differential operators KK theory amenability Fell bundles and index theory to quantization of Poisson manifolds

Readers will find examples of important tools for working with groupoids This book is geared to students and researchers It is intended to improve their understanding of groupoids and to encourage them to look further while learning about the tools used

Quantum Independent Increment Processes I David Applebaum, B.V. Rajarama Bhat, Johan Kustermans, J. Martin Lindsay, 2005-02-18 This volume is the first of two volumes containing the revised and completed notes lectures given at the school Quantum Independent Increment Processes Structure and Applications to Physics This school was held at the Alfried Krupp Wissenschaftskolleg in Greifswald during the period March 9 22 2003 and supported by the Volkswagen Foundation The school gave an introduction to current research on quantum independent increment processes aimed at graduate students and non specialists working in classical and quantum probability operator algebras and mathematical physics The present first volume contains the following lectures

L vy Processes in Euclidean Spaces and Groups by David Applebaum Locally Compact Quantum Groups by Johan Kustermans Quantum Stochastic Analysis by J Martin Lindsay and Dilations Cocycles and Product Systems by B V Rajarama Bhat

Selected Papers on Probability and Statistics, 2009 This volume contains translations of papers that originally appeared in the Japanese journal Sugaku The papers range over a variety of topics in probability theory statistics and applications This volume is suitable for graduate students and research mathematicians interested in probability and statistics

Lectures on Operator Theory B. V. Rajarama Bhat, George A. Elliott, Peter A. Fillmore, 1999 This book resulted from the lectures held at The Fields Institute Waterloo ON Canada Leading international experts presented current results on the theory of C algebras and von Neumann algebras together with recent work on the classification of C algebras Much of the material in the book is appearing here for the first time and is not available elsewhere in the literature

Random Sets and Invariants for (Type II) Continuous Tensor Product Systems of Hilbert Spaces Volkmar Liebscher, 2009-04-10 In a series of papers Tsirelson constructed from measure types of random sets or generalised random processes a new range of examples for continuous tensor product systems of Hilbert spaces introduced by Arveson for classifying E_0 semigroups upto cocycle conjugacy This paper starts from establishing the converse So the author connects each continuous tensor product system of Hilbert spaces with measure types of distributions of random closed sets in $[0, 1]$ or \mathbb{R} These measure types are stationary and factorise over disjoint intervals In a special case of this construction the corresponding measure type is an invariant of the product system This shows completing in a more systematic way the Tsirelson examples that the classification scheme for product systems into types I_n II_n and III is not complete Moreover based on a detailed study of this kind of measure types the author constructs for each stationary factorising measure type a continuous tensor product system of Hilbert spaces such that this measure type arises as the before mentioned invariant

Operator Algebras, Mathematical Physics, and Low Dimensional Topology Richard Herman, Betül

Tanbay, 1993-11-15 This volume records the proceedings of an international conference that explored recent developments and the interaction between mathematical theory and physical phenomena **Advances in Quantum Dynamics** Geoffrey

L. Price, 2003 This volume contains the proceedings of the conference on Advances in Quantum Dynamics The purpose of the conference was to assess the current state of knowledge and to outline future research directions of quantum dynamical semigroups on von Neumann algebras Since the appearance of the landmark papers by F Murray and J von Neumann On the Rings of Operators von Neumann algebras have been used as a mathematical model in the study of time evolution of quantum mechanical systems Following the work of M H Stone von Neumann and others on the structure of one parameter groups of unitary transformations many researchers have made fundamental contributions to the understanding of time reversible dynamical systems This book deals with the mathematics of time irreversible systems also called dissipative systems The time parameter is the half line and the transformations are now endomorphisms as opposed to automorphisms For over a decade W B Arveson and R T Powers have pioneered the effort to understand the structure of irreversible quantum dynamical systems on von Neumann algebras Their papers in this volume serve as an excellent introduction to the theory Also included are contributions in other areas which have had an impact on the theory such as Brownian motion dilation theory quantum probability and free probability The volume is suitable for graduate students and research mathematicians interested in the dynamics of quantum systems and corresponding topics in the theory of operator algebras

Sontz, 2008 This volume contains recent results in quantum probability and related topics The contributions include peer reviewed papers on interacting Fock space and orthogonal polynomials quantum Markov semigroups infinitely divisible processes free probability white noise quantum filtering and control quantum information dilations applications of quantum probability in physics and quantum and classical models in biology This diversity reflects the strong and constructive relations between quantum probability and different sectors of mathematics physics and other sciences and technologies BOOK JACKET **Quantum Probability And Related**

Topics - Proceedings Of The 28th Conference Roberto Quezada, Julio C Garcia, Stephen B Sontz, 2008-10-17 This volume contains recent results in quantum probability and related topics The contributions include peer reviewed papers on interacting Fock space and orthogonal polynomials quantum Markov semigroups infinitely divisible processes free probability white noise quantum filtering and control quantum information dilations applications of quantum probability in physics and quantum and classical models in biology This diversity reflects the strong and constructive relations between quantum probability and different sectors of mathematics physics and other sciences and technologies *Representations on Krein Spaces [Hot] and Derivations of C^* -Algebras* Edward Kissin, Victor S Shulman, 1997-10-03 This text provides a comprehensive treatment of representations on indefinite metric spaces and their applications to the theory of derivations of C algebras The

book consists of two parts The first studies the geometry of indefinite metric spaces Krein and Pi kappa spaces and describes the theory of J symmetric operator algebras and representations of algebras and groups on these spaces in a systematic form For representations on Pi kappa spaces many significant new results are obtained this establishes a possible approach to the general theory of representations In the second part different techniques of the theory of J symmetric representations on Krein spaces are applied to the theory of derivations of C algebras implemented by skew symmetric and dissipative operators Various results are obtained which establish a link between the deficiency indices of skew symmetric operators implementing derivations of C algebras and dimensions of representations of these algebras The problem of isomorphism of skew symmetric operators is also touched upon Numerous properties of the domains of derivations are investigated These domains constitute an important subclass of differentiable Banach algebras that is dense subalgebras of C algebras with properties in many respects similar to the properties of algebras of differentiable functions The Weyl operator commutation relations are examined in the general context of derivations of C algebras Powers and Arveson s indices of one parameter semigroups of endomorphisms of the algebra B are considered and various notions of the index of a derivation are introduced and studied Application of the theory of J symmetric representations on Krein spaces to the theory of derivations of C algebras is a new research area of growing interest and there are many exciting advances to be made in this field The book covers a fairly large and complex body of material and will serve as a stimulus to further research activity in this area Continuous Semigroups of *-endomorphisms of Factors of Type I_{oo} and of Type II₁ Alexander Alevras,1995 Operator Theory, Systems Theory and Scattering Theory: Multidimensional Generalizations Daniel Alpay,Victor Vinnikov,2006-03-30 This volume contains a selection of papers from experts in the area on multidimensional operator theory Topics considered include the non commutative case function theory in the polydisk hyponormal operators hyperanalytic functions and holomorphic deformations of linear differential equations Operator Theory Systems Theory and Scattering Theory will be of interest to a wide audience of pure and applied mathematicians electrical engineers and theoretical physicists
