

discharge. The doctor is not, therefore, an autocrat on the bridge handing down commands to all around her.

If this is true, then it may be dangerous for the doctor to step out of this individual role and influence the medical care of groups of patients, because there will be conflict between, say, keeping his patient in hospital and pressures to shorten the average length of stay in hospital. Politicians forget that it is only too easy to practise cheap medicine, but that this may not be right.

The third relationship discussed in this book is that between the doctor and litigation over his actions. Many doctors believe that the increasingly vexatious patient will damage the trust between patients and their doctors and that this will impair standards of medical care. More legal action will force doctors to reconsider whether the risks to them (*sic*) justify carrying out potentially dangerous procedures. They can always decline to do so, and instead ask the patient to seek another opinion. Who benefits then?

Naturally there are no answers in this book, but I recommend practising doctors, and not just those interested in philosophy and ethics, to read this book. I found that some of the writing was neither simple nor clear and some words should not have been allowed to escape from the dictionaries. But this writing on the hospital walls should not be ignored by the profession.

Explorations in Medicine: Volume 1

Edited by David Lamb, Teifon Davies, and Marie Roberts, 222 pages, Aldershot, £22.50, Gower Publishing Group, 1987

A major issue in contemporary philosophy of medicine is that of mechanism versus holism. In a mechanistic approach, the essential subject of medical theory is how the operation of physical processes results in functioning and malfunctioning of the various bodily organs; health is defined as the absence of disease, illness or injury; and the task of medicine is to relieve malfunctioning and suffering by removing its physical causes. In a holistic approach, the subject is the person as a whole, health is an ideal of

maximum well-being and the function of medicine is not only to relieve injury and pain but also to increase personal autonomy. A crucial question for both theory and practice is which approach should be adopted, or, if they are combined, how exactly the synthesis is to be made.

The articles in this collection cover a range of topics in medical ethics and philosophy of medicine, but they have in common that they all to some degree defend or presuppose a holistic and person-centred approach to medicine.

This is most explicit in the two papers by E K Ledermann, the first of which argues that, while both approaches must be used, the holistic approach should be primary, while the second reinforces the point by showing how theories in medicine differ significantly from those in the purely physical sciences, such as astronomy. These papers are complemented by David Seedhouse's, which argues for a holistic concept of health, and by Ann Slack's, which describes some of the harm done by the excessively mechanistic approach of the 'medical establishment'.

Three other papers show, by implication, the need for a holistic approach to medical ethics, ie one that both respects individuals as persons and acknowledges that they are members of a wider social group. Thus Ruth Chadwick's paper criticises the *Warnock Report* for trying to deal with the ethics of reproductive technology without considering its effects on society as a whole. George Agich's paper argues that there are great difficulties in deciding what is a justifiable policy for genetic engineering if one relies on traditional or 'Rawlsian' considerations of justice (though it is unclear whether his conclusion is that we should reject genetic engineering altogether or that we should use a less individualistic ethical framework). And Bob Brecher seeks to demonstrate the impossibility of any morally neutral definition of mental illness, such as one based on lack of 'rationality', from which it would follow that even diagnosis has to consider the person in society.

The remaining three papers are concerned with applying the moral principle of respect for persons. Charles Dougherty derives from it ten criteria for 'morally acceptable research with human subjects', many of which have been all too often ignored. Heather Milne derives from 'a view of persons as "moral wholes"' a theory of the limits of permissible genetic engineering.

Finally, David Lamb examines 'the slippery slope' argument, that to permit abortion or to legalise euthanasia, even in limited and justifiable instances, would erode respect for human life, and argues that it fails in the case of abortion but is valid for euthanasia.

It should be added that the level of these papers is very high. Some are more concise than others, but every one of them is clear, interesting and worth reading. No reader is likely to agree with everything in them; but something can be learnt from them all.

The Contraceptive Ethos: Reproductive Rights and Responsibilities

Edited by Stuart F Spicker, William B Bondeson and H Tristram Engelhardt Jr, 254 pages, Dordrecht, Holland, £32.95, US \$39, Dfl 120.00, D Reidel Publishing Company, 1987

This book, part of a series on philosophy and medicine, contains thirteen papers presented at an American symposium entitled *Reproductive Rights and Responsibilities: Medicine and the New Biology*, held in 1983, and subsequently revised after discussion between authors and participants. The authors are American, mainly academics in medicine, philosophy, law, political science, sociology, history and population dynamics.

The book's introduction refers to 'the plethora of concepts germane to the new contraceptive ethos'. Some of the authors, however, question whether modern contraceptive technology has led to a new ethos about procreation, contraception, parenthood and population. This key question evokes a variety of responses. Most of the authors agree that sexual activity and contraception have to be seen in their social and moral context. The development of effective contraception has depended on contemporary cultural determinants, especially sexual attitudes and the socio-economic role of the female. Other factors influencing sexual behaviours are general population need, maternal and infant mortality rates, beliefs about

Disease and Diagnosis William E. Stempsey, 2005-12-11 The germs of the ideas in this book became implanted in me during my experience as a resident in clinical pathology at Boston University Medical Center At the time I had inklings that the test results churned out by our laboratories were more than scientific facts As a philosophically unsophisticated young physician however I had no language or framework to analyze what I saw as a deep philosophical problem a problem largely unrecognized by most physicians The test results provided by our laboratories were accurate and of great practical importance for patient care However most of the physicians who relied on our test results to diagnose and treat their patients either did not have the time or interest to consider the philosophical issues inherent in diagnosis or like me had inadequate means to further analyze them It was more than ten years later that I began doctoral studies in philosophy and I was fortunate to find a faculty that was supportive of my efforts to address the problem This book began as my doctoral dissertation in the Department of Philosophy at Georgetown University I would like to acknowledge the assistance of my mentor Robert Veatch Ph D Our conversations during my Georgetown years led me in new and often fascinating directions I would also like to acknowledge the help of Kenneth Schaffner M D Ph D

Bioethics and Moral Content: National Traditions of Health Care Morality H. Tristram Engelhardt Jr., L.M. of approaches to bioethics and brings into question whether there is unambiguously one ethics for bioethics to apply The Polish School of Philosophy of Medicine Ilana Löwy, 2012-12-06 My discovery of the Polish School of philosophy of medicine stemmed from my studies in the genesis of Ludwik Fleck's epistemology These studies and my interest in the scientific roots of Fleck's epistemology were a nearly natural result of my own biography like Fleck I had been trained and had worked as an immunologist and had later switched to studies in the social history of medicine and biology Moreover it so happened that Fleck's book *Genesis and Development of a Scientific Fact* the description of a science as it is not as it should be was the first epistemological study in which I found echos of my experience in the laboratory My interest in Fleck was also heightened by the fact that in his works and as I discovered later in the works of his predecessors of the Polish School of philosophy of medicine was formulated the problem that had stimulated my interest in the history of medicine and biology and is still central to my present investigations the relationships between biological knowledge and clinical practice The writing of the book was made possible through the help of many colleagues and friends The unfailing support for my research whatever its subject might be from my colleagues from Unit 158 of INSERM and in particular from its head Patrice Pinell has made my study of the Polish School possible Death: Beyond Whole-Brain Criteria Richard M. GENERAL INTRODUCTION This study of the concept of health is an attempt to combine central ideas in modern philosophy of medicine with certain results from analytical action theory What emerges from the study is a concept of health based on an action theoretic foundation A person's health is characterized as his ability to achieve his vital goals The general conception is not new This study has been inspired by a number of scholars both ancient and modern The most important influences from the latter have been those of Georges Canguilhem H Tristram Engelhardt Jr Caroline Whitbeck and Ingmar Pern The novel aspect of this book consists of elaborations made to the general conception First the action theoretic platform is analysed in some detail The nature of the ability involved as well as the conditions for having that ability are specified Second the vital goals of man are given considerable attention Some previous attempts to define such vital goals are analysed and criticized A new characterization is proposed in which the vital goals are conceptually linked to the notion of happiness A person's vital goals are such states of affairs as are necessary and together sufficient for his minimal happiness Third a number of consequences of this conception are observed and analysed One issue which is particularly emphasized is that of whether the concept of health is a theoretical or a normative concept The Philosophy of Medicine H. Tristram Engelhardt Jr., 2006-04-28 The term bioethics was coined in 1971 just as interest in the medical humanities claimed a prominent place in medical education Out of this interest a substantial area of research and scholarship took shape the philosophy of medicine This field has been directed to the epistemological ontological and value theoretical issues occasioned by medicine and the biomedical sciences Bioethics is nested in this field and can only be fully understood in terms of the foundational issues it

addresses This collection of essays in honor of Stuart F Spicker one of the individuals who gave shape to the philosophy of medicine lays out the broad scope of concerns from the philosophy of embodiment to issues of the role of ethics consultants to concepts of disease equity and the meaning of history Concepts and Measurement of Quality of Life in Health Care L.Y Nordenfelt,2013-11-11 Questions concerning the notion of quality of life its definition and its applications for purposes of assessment and measurement in social and medical contexts have been widely discussed in Scandinavia during the last ten years To a great extent this discussion mirrors the international development in the area Several methods for the assessment and measurement of quality of life have been borrowed from the UK and the US and then further developed in northern Europe But there has also been an internal development This holds in particular for the social arena where Scandinavia has had a special tradition both in theory and practice In this volume an attempt is made to illustrate some aspects of the philosophical and in general theoretical discussion concerning quality of life in Scandinavia In addition some prominent scholars from other parts of Europe i e France the Netherlands the UK and Italy have been invited to contribute The volume is divided into three sections The first contains philosophical analyses of the general notion of quality of life and proposes a number of different explications The second section considers various applications of the notion of quality of life in health care The papers serve to disentangle some intellectual and ethical problems that stem from these applications The third section is more practical and focuses on methods of measuring quality of life in medicine and health care *Ownership of the Human Body* H.A. Ten Have,J.W. Welie,2013-11-11 This is the first book in healthcare ethics addressing the moral issues regarding ownership of the human body Modern medicine increasingly transforms the body and makes use of body parts for diagnostic therapeutic and preventive purposes The book analyzes the concept of body ownership It also reviews the ownership issues arising in clinical care for example donation policies autopsy and biomedical research Societies and legal systems also have to deal with issues of body ownership A comparison is made between specific legal arrangements in The Netherlands and France as examples of legal approaches In the final section of the book different theoretical perspectives on the human body are analyzed libertarian personalist deontological and utilitarian theories of body ownership

Confucian Bioethics Ruiping Fan,2006-04-11 This volume explores Confucian views regarding the human body health virtue suffering suicide euthanasia human drugs human experimentation and justice in health care distribution These views are rooted in Confucian metaphysical cosmological and moral convictions which stand in contrast to modern Western liberal perspectives in a number of important ways In the contemporary world a wide variety of different moral traditions flourish there is real moral diversity Given this circumstance difficult and even painful ethical conflicts often occur between the East and the West with regard to the issues of life birth reproduction and death The essays in this volume analyze the ways in which Confucian bioethics can clarify important moral concepts provide arguments and offer ethical guidance The volume should be of interest to both general readers coming afresh to the study of bioethics ethics and Confucianism as well as for

philosophers ethicists and other scholars already familiar with the subject
