## **Contrast-enhanced Ultrasound Of Liver Diseases:**

**Contrast-Enhanced Ultrasound of Liver Diseases** L. Solbiati, A. Martegani, E. Leen, 2003-01-07 The recent development of sonographic contrast agents or microbubbles has stimulated increasingly intensive studies on the relationships between ultrasound and contrast media. As a result, contrast-specific hardware and software systems have been developed with impressive speed, and a new imaging modality, contrast-enhanced ultrasound (CEUS), has been introduced. This book is the result of the collaboration of a group of pioneers of CEUS who wish to give the reader a complete overview of second-generation contrast agents to depict their clinical applications and to present the most updated contrast-specific software for noncardiologic uses, especially for the study of liver diseases. The contents and wealth of illustrations make this volume an invaluable resource for radiologists, hepatologists, and oncologists in their everyday clinical practice.

**Contrast-Enhanced Ultrasound of Liver Diseases** Luigi Solbiati, 2003 Using the accounts of pioneers in contrast-enhanced ultrasound, this text offers an overview of second-generation contrast agents depicting their clinical applications and presenting the most updated contrast-specific software for noncardiologic uses, especially for the study of liver diseases.

**Contrast-Enhanced Ultrasound of Liver Diseases** L. Solbiati, A. Martegani, E. Leen, J.M. Correas, P.N. Burns, D. Becker, 2004-01-21 In the last few years, the development of sonographic contrast agents or microbubbles has stimulated increasingly intensive studies on the relationships between ultrasound and contrast media. As a result, contrast-specific hardware and software systems have been introduced by different ultrasound manufacturers with impressive speed. This has finally led to the birth of a very new imaging modality, contrast-enhanced sonography (CEUS). Since 1999, the introduction of second-generation contrast agents has represented a decisive step towards the extensive clinical use of CEUS and has simultaneously made obsolete most, if not all, scientific publications available so far. This book is, to our knowledge, the first to deal entirely with second-generation contrast agents and the most updated contrast-specific software for noncardiologic uses. The reasons why the liver has been chosen as the only target of the book are easily understandable by radiologists and hepatologists alike. The study of vascularity is the only purpose of CEUS, and the liver has a unique vascular system with two different inflow systems resulting in a single outflow. Furthermore, the pathologically different focal liver lesions (FLLs) are mostly characterized by different models of vascularity. CEUS can mimic contrast-enhanced computed tomography and magnetic resonance imaging, basing differential diagnosis on the morphological and temporal characteristics of enhancement, but with the additional unique advantage of the study being done in real time.
