Secor, 2015-06-15 A synthetic treatment of all marine fish taxa teleosts and elasmobranchs this book employs explanatory frameworks from avian and systems ecology while arguing that migrations are emergent phenomena structured through schooling phenotypic plasticity and other collective agencies The book provides overviews of the following concepts The comparative movement ecology of fishes and birds The alignment of mating systems with larval dispersal Schooling and migration as adaptations to marine food webs Natal homing Connectivity in populations and metapopulations The contribution of migration ecology to population resilience

Marine Pelagic Cyanobacteria: Trichodesmium and other Diazotrophs E.J. Carpenter, D.G. Capone, 2013-03-09 Planktonic marine cyanobacteria are abundant and significant in the biogeochemistry of the sea This volume focuses on the filamentous cyanobacteria particularly those in the genus *Trichodesmium* which are common in tropical and subtropical seas A portion of this book also concerns bloom forming cyanobacteria in the Baltic Sea area Filamentous cyanobacteria are important as primary producers and for the fixation of atmospheric nitrogen and thus are significant in global cycling of both of these elements In recent years through the application of new techniques and intensive multi disciplinary research programs progress has been made in understanding both the biology of these cyanobacteria and their place in the marine food web A broad range of topics is covered in this book ranging from molecular biology physiology ultrastructure enzyme localization toxicology remote sensing buoyancy herbivory and the ecology of these organisms in the marine food web This volume is an outgrowth of a NATO sponsored meeting held in May 1991 in Bamberg Germany and represents the latest synthesis on these marine phytoplankters

Paulson, Board on Agriculture, National Research Council, 1998-07-27 Brucellosis a bacterial disease was first noted in the Greater Yellowstone Area in 1917 and has been a chronic presence there since then This book reviews existing scientific knowledge regarding brucellosis transmission among wildlife particularly bison elk and cattle in the Greater Yellowstone Area It examines the mechanisms of transmission risk of infection and vaccination strategies The book also assesses the actual infection rate among bison and elk and describes what is known about the prevalence of *Brucella abortus* among other wildlife

Insect Movement Ian Woiwood, D. R. Reynolds, C. D. Thomas, 2001 Knowledge of insect movement particularly of flight is crucial to our understanding of the great ecological and evolutionary success of insects The last 20 years have seen many advances in this subject area New fields have arisen such as metapopulation theory and dramatic developments have taken place in methods of studying movement as a result of new techniques in molecular biology and radar monitoring There have also been advances in our knowledge of flight related physiology and behaviour This book which is based on the main papers presented at the Royal Entomological Society's 20th Symposium held in September 1999 brings us up to date with these developments It contains chapters on flight mechanisms foraging movements migration the evolution of movement strategies the interactions between dispersal rates population structure and gene flow the effects of climate change on geographical distribution It is essential reading for entomologists and of interest to those researching animal behaviour physiology ecology and genetics

Diel Vertical Migration of Zooplankton in Lakes and Oceans Joop Ringelberg, 2009-12-01 Whatever theory may be advanced to explain diurnal migration the underlying reactions involved must be demonstrated convincingly in the laboratory before the explanation can be fully accepted George L. Clarke 1933 p 434 In oceans and lakes zooplankton often make diel vertical migrations DVM descending at dawn and coming up again in late afternoon and evening The small animals cover distances of 10 40 m in lakes or even a few hundred metres in the open oceans Although not as spectacular as migrations of birds or the massive movements of large mammals over the African savannas the numbers involved are very large and the biomass exceeds the bulk of the African herds For example in the Antarctic oceans swarms of Krill may cover kilometres across with thousands of individuals per cubic metre These Euphausiids are food for whales the most bulky animals on earth Zooplankton are key species in the pelagic food web intermediary between algae and fish and thus essential for the functioning of the pelagic community Prey for many they have evolved diverse strategies of survival and DVM is the most imp

Weller,1999-02-18 Readable and practical account of wetland bird ecology and conservation *Animal Dispersal* N.C. Stenseth,W.Z. Lidicker,2012-12-06 4 1 1 Demographic significance Confined populations grow more rapidly than populations from which dispersal is permitted Lidicker 1975 Krebs 1979 Tamarin et al 1984 and demography in island populations where dispersal is restricted differs greatly from nearby mainland populations Lidicker 1973 Tamarin 1977 1978 Gliwicz 1980 clearly demonstrating the demographic significance of dispersal The prevalence of dispersal in rapidly expanding populations is held to be the best evidence for presaturation dispersal Because dispersal reduces the growth rate of source populations it is generally believed that emigration is not balanced by immigration and that mortality of emigrants occurs as a result of movement into a sink of unfavourable habitat If such dispersal is age or sex biased the demography of the population is markedly affected as a consequence of differences in mortality in the dispersive sex or age class Habitat heterogeneity consequently underlies this interpretation of dispersal and its demographic consequences although the spatial variability of environments is rarely assessed in dispersal studies **Mullica River-Great Bay (MRGB) National Estuarine Research Reserve in New Jersey**,1997 Behavioral Adaptation to Intertidal Life Guido Chelazzi,Marco Vannini,2013-12-20 The NATO Advanced Research Workshop on Behavioural Adaptation to Intertidal Life held in Castiglione della Pescaia Italy May 1987 was attended by 50 participants most of whom presented requested lectures It was perhaps the first time that specialists of various animal groups from cnidarians to birds were able to meet and discuss the importance of behavioural adaptation to this peculiar sometimes very harsh environment But the taxonomic barrier is not the only one which the meeting attempted to overcome Lately the research on intertidal biology has spread from pure taxonomy and static analysis of community structure to such dynamic aspects as intra and interspecific relationships and physiological mechanisms aimed at avoiding stress and exploitation of limited resources This increasing interest stems not only from an inclination for this particular ecological system and some of its typical inhabitants but also from the realization that rocky and sandy shore communities are suitable models for testing and improving some global theories of evolutionary biology behavioural ecology and sociobiology The number of eco physiological and eco ethological problems emerging from the study of intertidal animals is fascinatingly large and a complete understanding of this environment cannot be reached using a strictly reductionistic or a pure holistic approach Towards a Model of Ocean Biogeochemical Processes Geoffrey T. Evans,Michael J.R. Fasham,2013-06-29 Key biogeochemical events in the ocean take place in less than a second are studied in experiments lasting a few hours and determine cycles that last over seasons or even years Models of the controlling processes thus have to take into account these time scales This book aims at achieving consensus among these controlling processes at all relevant time scales It helps understand the global carbon cycle including the production and breakdown of

solved organic matter and the production sinking and breakdown of particles The emphasis on considering all time scales in submodel formulation is new and of interest to all those working in global ocean models and related fields *Advances in the Science and Technology of Ocean Management* Hance Smith,2002-03-11 This book reviews key developments in the field of marine science and technology It focuses on three major themes such as the importance of technical developments in ocean management the application of these developments to specific sea uses ranging from fish farming to the disposal of industrial waste and the long term issues that such developments raise The Monarch Butterfly Karen Suzanne Oberhauser,Michelle J.
