**Sourcebook of Models for Biomedical Research** P. Michael Conn, 2008-03-07 The collection of systems represented in Sourcebook of genomic programs although this work is certainly well Models for Biomedical Research is an effort to reflect the represented and indexed diversity and utility of models that are used in biomedicine Some models have been omitted due to page limitations That utility is based on the consideration that observations and we have encouraged the authors to use tables and made in particular organisms will provide insight into the gures to make comparisons of models so that observations workings of other more complex systems Even the cell not available in primary publications can become useful to cycle in the simple yeast cell has similarities to that in the reader humans and regulation with similar proteins occurs We thank Richard Lansing and the staff at Humana for Some models have the advantage that the reproductive guidance through the publication process mitotic development or aging cycles are rapid compared As this book was entering production we

learned of the with those in humans others are utilized because individual loss of Tom Lanigan Sr Tom was a leader and innovator proteins may be studied in an advantageous way and that in scientific publishing and a good friend and colleague to have human homologs Other organisms are facile to grow all in the exploratory enterprise We dedicate this book to in laboratory settings or lend themselves to convenient analysis his memory We will miss him greatly *Social Behaviour in Mammals* Trevor B. Poole, 2013-04-17 Mammalian sociobiology is a rapidly advancing field which has made enormous strides in the last ten years The last major monograph on the subject Ewer 1968 was published sixteen years ago and there is a need for this information to be examined in terms of modern sociobiological theory My approach throughout is evolutionary and is therefore directed strongly towards research which throws light on the ways in which mammals behave in their natural environments I have tried to cover as wide a range of mammalian species as possible although in some cases the only data available were obtained from captive individuals The coverage of this book is not a reflection of the volume of literature published on different species as I have tried to avoid undue emphasis on the social behaviour of primates and laboratory rodents I have made scrupulous efforts throughout to avoid an anthropomorphic approach to mammalian behaviour Terms such as strategy evaluation or choice do not therefore imply conscious planning but are used neutrally in the way in which they would be applied to a chess playing computer In the case of mammals the programmer was natural selection While I am fully aware that human beings are mammals any detailed consideration of human social behaviour lies outside the scope of this book However the book may provide a complementary text to those interested in that subject **Bowker's Medical Books in Print**, 1975 *Species, Species Concepts and Primate Evolution* William H. Kimbel, Lawrence B. Martin, 2013-12-18 A world of categories devoured of spirit waits for life to return Saul Bellow Humboldt's Gift The stock in trade of communicating hypotheses about the historical path of evolution is a graphical representation called a phylogenetic tree In most such graphics pairs of branches diverge from other branches successively marching across abstract time toward the present To each branch is tied a tag with a name a binominal symbol that functions as does the name given to an individual human being On phylogenetic trees the names symbolize species What exactly do these names signify What kind of information is communicated when we claim to have knowledge of the following types *Tetodonius mathewzi* was ancestral to *Pseudotetodonius ambiguus* The sample of fossils attributed to *Homo habilis* is too variable to contain only one species Interbreeding populations of savanna baboons all belong to *Papio anubis* *Hylobates lar* and *H. pileatus* interbreed in zones of geographic overlap While there is nearly universal agreement that the notion of the species is fundamental to our understanding of how evolution works there is a very wide range of opinion on the conceptual content and meaning of such particular statements regarding species This is because oddly enough evolutionary biologists are quite far from agreement on what a species is how it attains this status and what role it plays in evolution over the long term
