Antsaklis, 2003-06-24 It is with great pleasure that I offer my reflections on Professor Anthony N Michel's retirement from the University of Notre Dame I have known Tony since 1984 when he joined the University of Notre Dame's faculty as Chair of the Department of Electrical Engineering Tony has had a long and outstanding career As a researcher he has made important contributions in several areas of systems theory and control theory especially stability analysis of large scale dynamical systems The numerous awards he received from the professional societies particularly the Institute of Electrical and Electronics Engineers IEEE are a testament to his accomplishments in research He received the IEEE Control Systems Society's Best Transactions Paper Award 1978 and the IEEE Circuits and

Systems Society's Guillemain Cauer Prize Paper Award 1984 and Myril B Reed Outstanding Paper Award 1993 among others. In addition, he was a Fulbright Scholar 1992 and received the Alexander von Humboldt Forschungspreis Alexander von Humboldt Research Award for Senior U.S. Scientists from the German government 1997. To date, he has written eight books and published over 150 archival journal papers. Tony is also an effective administrator who inspires high academic standards.

**Modelling and Control of Dynamic Systems Using Gaussian Process Models** Juš Kocijan, 2015-11-21. This monograph opens up new horizons for engineers and researchers in academia and in industry dealing with or interested in new developments in the field of system identification and control. It emphasizes guidelines for working solutions and practical advice for their implementation rather than the theoretical background of Gaussian process (GP) models. The book demonstrates the potential of this recent development in probabilistic machine learning methods and gives the reader an intuitive understanding of the topic. The current state of the art is treated along with possible future directions for research. Systems control design relies on mathematical models and these may be developed from measurement data. This process of system identification when based on GP models can play an integral part of control design in data-based control and its description as such is an essential aspect of the text. The background of GP regression is introduced first with system identification and incorporation of prior knowledge then leading into full-blown control. The book is illustrated by extensive use of examples, line drawings, and graphical presentation of computer simulation results and plant measurements. The research results presented are applied in real-life case studies drawn from successful applications including a gas-liquid separator control, urban traffic signal modelling and reconstruction, and prediction of atmospheric ozone concentration. A MATLAB toolbox for identification and simulation of dynamic GP models is provided for download.

**Digital Control of Dynamic Systems** Ellis-Kagle Press, Gene F. Franklin, J. David Powell, Michael L. Workman, 1998. Discusses the use of digital computers in the real-time control of dynamic systems.
